Ridge's Budget Proposal Called Good For Ag

EVERETT NEWSWANGER
Editor

HARRISBURG (Dauphin Co.)- The annual Pennsylvania budget unveiled Tuesday by Gov. Tom Ridge included an increase of more than $4.1 million for programs related to agriculture. Pennsylvania's Ag Secretary Sam Hayes said the budget demonstrated the governor's commitment to Pennsylvania's No. 1 industry.

"In addition to revenue increases throughout several program areas, this will be the fiscal year when a proposed $72 million will become available to the Department of Agriculture for our major construction projects," Hayes said. "These include a new livestock evaluation center, a new greenhouse, and the upgrade and construction project at the Pennsylvania Farm Show Complex.

"Funds will continue to flow into our farmland preservation program making it possible for us to continue our role as the leading state in the nation," Hayes said. "Pennsylvania has preserved more than 1,500 farms and 183,000 acres of farmland, more than any other state in the nation. Pennsylvania has been recognized by the American Farmland Trust as having the best farmland-preservation program in the country."

To continue Pennsylvania's nation-leading pace of farmland preservation and Gov. Ridge's "Growing Greener" initiative, a commitment of $59.6 million has been recommended for the upcoming fiscal year. "Growing Greener" is Gov. Ridge's commitment to Pennsylvania's environment.

Animal and plant health issues receive increases that include the West Nile virus and the Plum Pox Virus. Issues such as Johne's Disease and Scrapie also are animal-health initiatives in the proposed budget. The same is true for the Animal Health Commission.

To address concerns facing the dairy industry and the sheep industry, PDA now has $200,000 available to fight the Johne's Disease and $35,000 for the Scrapie program.

To assist in PDA's mission to eradicate the Plum Pox Virus from Pennsylvania, assistance totaling $717,000 has been proposed to support continuing field and laboratory efforts. Also, the proposed budget includes $3.1 million for the Plum Pox Indemnification Program for the upcoming year. Eradication and indemnification payments assist fruit growers with orchards that have been stricken with Plum Pox Virus. The virus attacks stone fruits such as peaches, plums, nectarines and apricots. While the virus devastates the tree's capacity to produce, the fruit can be eaten without any fear whatsoever.

An increase of $110,000 has been recommended for agriculture research.

HERSHEY (Dauphin Co.) — While farmers' markets enjoy a surge in popularity and financial success, owners have realized that issues of farm safety, liability protection, and customer communications are critical.

Ken Wightman, Morristown, N.J., ought to know. Five million people reside within an hour drive of his farmer's market.

"It blows your mind," he told more than 100 growers and agri-industry representatives last week during the Mid-Atlantic Fruit and Vegetable Convention at the Hershey Lodge and Convention Center.

Wightman Farms includes about 150 acres, including a bakery and cider mill. "You name it, we do it," said Wightman, a third generation farmer whose farm is only about 32

(Turn to Page A37)

Fons De Ridder of Belgium delights in driving these horses in a recent Somerset County snow. "American harnesses are the best in the world," he said of his reason for incorporating Somerset countians to prepare harnesses for a 76-horse hitch. Turn to page B6 to read about the unusual quest to break a record listed in the "Guinness Book of World Records." ***Photo by Gay Brownlee, Somerset County correspondent***

Market Outlook, Quality Assurance Topics At Pork Expo

ANDY ANDREWS
Lancaster Farming Staff

NORTH CORNWALL (Lebanon Co.) — For corn producers, the crop carryover could be a burden on the market.

For those who depend on feed for their hogs, it's another story. Feed "will be cheap for at least another year," said Lou Moore, Penn State ag economist.

About 80 swine producers and agri- industry representatives listened to Moore's annual market outlook Tuesday at the 23rd Pennsylvania Pork Producers Council (PPPC) Keystone Pork Expo at the Lebanon Valley Expo Center.

Crop prices will remain reasonable through the rest of the year. "That's good news for the livestock industry," Moore said.

The U.S. has just been through the longest expansion in economic growth in its history, about 10 years. "Some young people don't even know what a recession is," he said.

Consumer price index, or the measure of inflation, stood at 3.4 percent, with food prices expected to increase by a mere 2.3 percent. Unemployment is at 4.2 percent — recognized as full employment, according to Moore.

The biggest good news is the proposed $1.5 trillion tax cut by the Bush Administration. "The question is not whether we'll see it or not, but how big it's going to be," Moore said.

Bad news has been the falling tech stock market, with NASDAQ down 39 percent from a year ago, Dow Jones is down 6 percent, and Standard and Poor down 10 percent.

For a recession to occur, there would have to be two consecutive quarters, or two three-month periods, of no economic

CATTLE: Compared to last Thursday's higher market, slaughter steers sold 1.00-2.00 lower. Early losses occurred on Monday but improved during Tuesday's better offering. Quality was mostly average, with a few attractive lots on offer. Receipts were reduced due to heavy snow across the state. Slaughter heifers, holsteins, and bulls not well tested. Slaughter cows traded firm to 1.00 higher. Supply included 35 percent slaughter steers and 55 percent cows.

SLAUGHTER STEERS: High Choice and Prime 2-4 1230-1485 lbs 78.60-80.75, with fancy singles up to 83.00. Choice 2-3 1135-1475 lbs 76.00-79.50, with high dressing 1-2 up to 81.75; 1510-1550 lbs 74.50-79.50. Select and low Choice 2-3 few 1050-1430 lb 72.00-76.25.

HOLSTEIN STEERS: High Choice and Prime 2-3 few 1565-1645 lbs 67.50-68.00, with an individual 1505 lbs 71.50. Choice 2-3 few 1510-1620 lbs 64.10-65.75.

SLAUGHTER HEIFERS: High Choice and Prime 2-4 few singles 1240-1300 lbs 80.50-83.00. Choice 2-3 few 1090-1350 lbs 76.00-78.75. Select and low Choice 2-3 few 1025-1285 lbs 71.75-76.50.

SLAUGHTER COWS: PERCENT LEAN WEIGHT BULK LOW DRESSING Breakers 75-80 over-1400 lbs 43.75-47.00 40.00-43.75 Boners 80-85 over-1200 lbs 42.50-46.75 38.00-42.50 Lean (Hi-Yield) 85-88 over-1200 lbs 40.50-44.75 36.00-40.50 Lean 88-90 over-1000 lbs 39.50-43.50 35.00-39.50 Lean (Light-Wt) 85-90 750 -1000 lbs 38.00-42.00 34.00-38.00. SLAUGHTER BULLS: Yield Grade 1 few 1420-1635 lbs 56.75-60.75, high dressing 1475-1885 lbs 67.50-67.75. Yield Grade 2 few 955-1710 lbs 54.25-59.50.

CALVES: Compared to last week, a light test of vealers sold fully steady, with very light demand. Trading was very active for holstein bulls suitable for special-fed veal barns with prices ranging 10.00-15.00 higher. Holstein heifer prices were mostly steady. Supply included 612 head in the State graded sale and 97 percent of the supply returned to feed.

VEALERS: Utility 60-105 lbs 20.00-40.00.

RETURN TO FARM: Holstein bulls 80-125 lbs 150.00-189.00; 74 lbs 75.00. Plainer-type bulls 80-115 lbs 146.00-173.00, weaker calves 75-105 lbs 38.00-60.00. Holstein heifers 85-115 lbs 275.00-325.00. Plainer-type heifers 85-105 lbs 255.00-300.00; 72 lbs 167.00. Beef-type bulls and heifers 75-90 lbs 130.00-235.00.

Report Supplied By USDA

In Chicago, prices were higher on extra large and large and unchanged on the remainder. In most other locations, prices were unchanged on all sizes. The market tone was steady to firm. Demand was light to good, mostly moderate and was best where features stimulated additional movement. Supplies were irregular, but were mostly adequate for current requirements. Breaking stock supplies were tight to fully adequate for the improved demand. Light type hens were adequate for the slow and unagressive demand.

CATTLE: Compared to last Thursday's higher market, slaughter steers sold 1.00-2.00 lower. Early losses occurred on Monday but improved during Tuesday's better offering. Quality was mostly average, with a few attractive lots on offer. Receipts were reduced due to heavy snow across the state. Slaughter heifers, holsteins, and bulls not well tested. Slaughter cows traded firm to 1.00 higher. Supply included 35 percent slaughter steers and 55 percent cows.

SLAUGHTER STEERS: High Choice and Prime 2-4 1230-1485 lbs 78.60-80.75, with fancy singles up to 83.00. Choice 2-3 1135-1475 lbs 76.00-79.50, with high dressing 1-2 up to 81.75; 1510-1550 lbs 74.50-79.50. Select and low Choice 2-3 few 1050-1430 lb 72.00-76.25.

HOLSTEIN STEERS: High Choice and Prime 2-3 few 1565-1645 lbs 67.50-68.00, with an individual 1505 lbs 71.50. Choice 2-3 few 1510-1620 lbs 64.10-65.75.

SLAUGHTER HEIFERS: High Choice and Prime 2-4 few singles 1240-1300 lbs 80.50-83.00. Choice 2-3 few 1090-1350 lbs 76.00-78.75. Select and low Choice 2-3 few 1025-1285 lbs 71.75-76.50.

SLAUGHTER COWS: PERCENT LEAN WEIGHT BULK LOW DRESSING Breakers 75-80 over-1400 lbs 43.75-47.00 40.00-43.75 Boners 80-85 over-1200 lbs 42.50-46.75 38.00-42.50 Lean (Hi-Yield) 85-88 over-1200 lbs 40.50-44.75 36.00-40.50 Lean 88-90 over-1000 lbs 39.50-43.50 35.00-39.50 Lean (Light-Wt) 85-90 750 -1000 lbs 38.00-42.00 34.00-38.00. SLAUGHTER BULLS: Yield Grade 1 few 1420-1635 lbs 56.75-60.75, high dressing 1475-1885 lbs 67.50-67.75. Yield Grade 2 few 955-1710 lbs 54.25-59.50.

CALVES: Compared to last week, a light test of vealers sold fully steady, with very light demand. Trading was very active for holstein bulls suitable for special-fed veal barns with prices ranging 10.00-15.00 higher. Holstein heifer prices were mostly steady. Supply included 612 head in the State graded sale and 97 percent of the supply returned to feed.

VEALERS: Utility 60-105 lbs 20.00-40.00.

RETURN TO FARM: Holstein bulls 80-125 lbs 150.00-189.00; 74 lbs 75.00. Plainer-type bulls 80-115 lbs 146.00-173.00, weaker calves 75-105 lbs 38.00-60.00. Holstein heifers 85-115 lbs 275.00-325.00. Plainer-type heifers 85-105 lbs 255.00-300.00; 72 lbs 167.00. Beef-type bulls and heifers 75-90 lbs 130.00-235.00.

	CATTLE	CALVES
TH'S WEEK	1869	1568
LAST WEEK	2016	1674
LAST YEAR	2263	1872

CATTLE: Compared to last week's closing prices, slaughter steers sold 1.00-2.00 lower. The steer market opened with losses but improved late in the week with better offerings. Early in the week, supply was limited due to heavy snow across the state but warmer weather conditions cleared roads later in the week as farmers were able to move cattle. Midwest feedlots traded cattle steady at 77.00-78.50 live and steady to 1.00 higher at 124.00-125.00 dressed basis. Slaughter heifers were not well tested. Local holstein steer prices traded 1.00 higher on a light test. Demand for

Delmarva Broiler/Fryer

ATLANTA, GA.
February 8, 2001
Report Supplied By USDA

Movement of ready- to- cook whole birds was light to fair. Offerings of 3 pound and larger sizes were generally noted as fully adequate. Lighter weights were adequate to closely cleared. Live supplies were light to moderate; weights were mixed in a full range of light to heavy. Processing schedules were light to moderate. Less than trucklot asking prices were unchanged at 52 to 66 cents. Trade sentiment was steady to fully steady on the smaller sizes; no better than steady on the heavier. Boneless skinless breasts and wings remained available. Other items, particularly bone-in breasts and thighs were in generally good balance.

February 7, 2000
Report Supplied By USDA

In Chicago, prices were higher on extra large and large and unchanged on the remainder. In most other locations, prices were unchanged on all sizes. The market tone was steady to firm. Demand was light to good, mostly moderate and was best where features stimulated additional movement. Supplies were irregular, but were mostly adequate for current requirements. Breaking stock supplies were tight to fully adequate for the improved demand. Light type hens were adequate for the slow and unagressive demand.

Daily National Grain Market Summary

St. Joseph, MO
January 31, 2001
Report Supplied By USDA

Daily National Grain Market Summary

Wheat bids moderately higher with corn and soybean bids lower. Traders spent most of the day making last minute position adjustments before USDA's supply and demand report Thursday. Wheat bids steady to 5 cents higher. Corn bids 1 to 2 cents lower. Sorghum 3 cents lower. Soybean steady to 3 cents lower. Not much activity in the pits to sway bids in either direction. Wheat bids higher as slow export demand and short covering was noted in wheat market ahead of USDA's report Corn slightly lower on predictions of a cut in export projections but losses are limit as cheaper corn prices continue to spark export interest. Soybeans bids also lower as position squaring the main factor and soybean meal is higher.

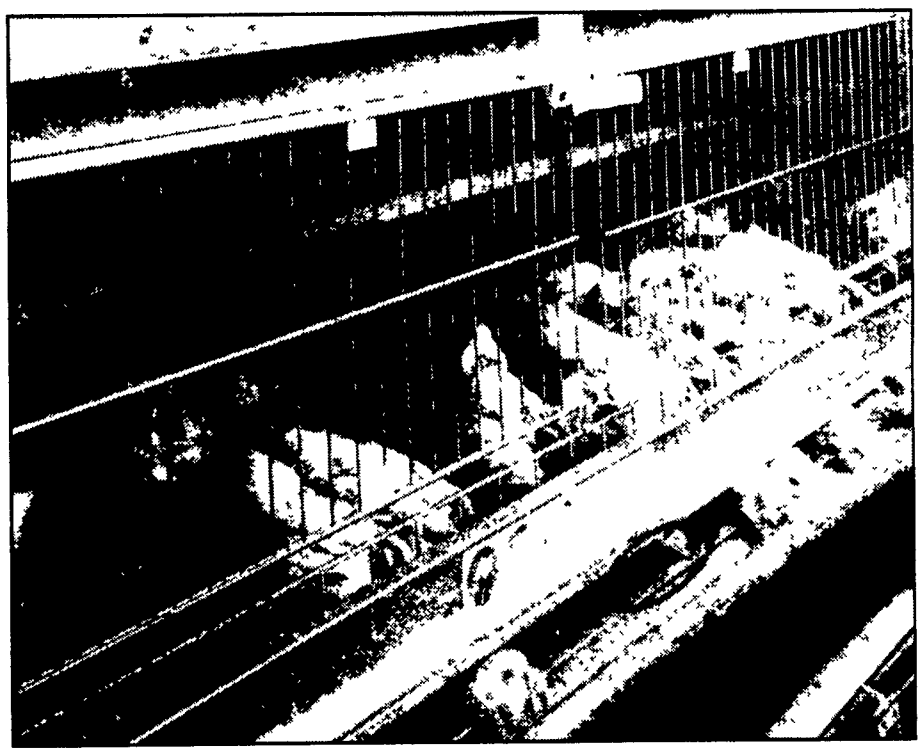
CHOOSE THE RIGHT WAY

WITH Big Dutchman.

UNIVENT Starter Pullet Cages
Stacked with Manure Belt



Advantages

- simple assembly of 3 to 8 tiers;
- feed troughs are mounted on supports for trough stability and long service life;
- feed trough with inner rim provides minimal feed losses;
- upper walkway for batteries with more than 5 tiers = easy bird control;
- better thermal economy (reduced heating expenses and reduced investment costs per bird) is achieved with systems of 4 or more tiers due to increased density;
- remarkably low bird mortality during rearing.

For Uniform Pullets and Dry Manure

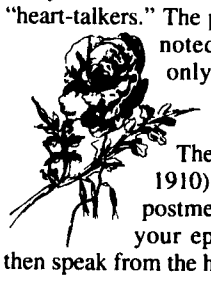
The OLD FARMER'S ALMANAC THIS WEEK WITH

FEBRUARY 12–18, 2001

WINTER'S BACK BREAKS, FEBRUARY 15

WHAT DO OUR HEARTS TREASURE?

Perhaps Valentine's Day should become the annual anniversary of the handwritten letter. Red roses are regal, but a real letter may be more rare. Do you still own an ink pen with a fine nib? Leave the letterhead for business dealings, but get out that fine linen bond for expressions of the heart. Letters have been variously described as "monitors," "comforters" and "heart-talkers." The poet Lord Byron (1692-1763) noted that "Letter-writing is the only device for combining solitude and good company." Of course, that was before e-mail. The writer William James (1842-1910) added, "As long as there are postmen, life will have zest." Start your epistle with, "My dearest...," then speak from the heart, and you can't go wrong



The post is the consolation of life.

–French writer Francois M A Voltaire (1694-1778)

The OLD FARMER'S WEATHER PROVERBS

In February if thou hearest thunder, thou wilt see a summer's wonder.

If sea fowl retire to the shore, a storm approaches.

TIP OF THE WEEK

☞ **Shelled nutmeats can be frozen for longer keeping. They'll remain good for two years in an airtight container.**

WALDORF SALAD

fresh salad greens of your choice (enough for 4 people)
1 cup apples, cored and chopped (skin on)
1 cup English walnuts
1 cup raisins
1/2 cup sunflower seeds
vinaigrette or other dressing

Rinse greens and arrange on 4 plates Mix other ingredients and arrange over the greens, breaking nutmeats into smaller pieces, as desired Add salad dressing of your choice

Makes 4 servings.

Remove Rust

ATTENTION TOBACCO FARMERS

Vector Tobacco Contracts

"Changing the Future of Tobacco"

Consider these options when growing tobacco in 2001:

* $1.50 pound for all grades grown of VT Tobacco, deductions made for 20%+ moisture
* Plants are furnished FREE and delivered to your farm, a savings of over $200 AC
* One year contract with the growers option for two more years
* Growers have opportunity to get in the ground floor of this exciting new idea
* Local, centrally located receiving stations
* A modified tobacco plant to be made into "nicotine free" cigarettes
* No modified tobacco shall be grown within 1320 feet of any other tobacco variety. IF YOU THINK YOU MAY HAVE A PROBLEM WITH THIS FOOTAGE, WE NEED TO MEASURE IT!
* Our growers can be proud that they are taking part in something that's positive, while still having the opportunity to make a good living raising one of the best cash crops available.
* Growers have been asking for a direct market to cigarette manufacturers
* Vector would still like to add another 1000 acres in PA
* Call for a packet with information about this new venture

For More Information And To Sign A Vector Contract:

* Mon -Fri. 9-4 p.m. Trileaf Tobacco Receiving Station. Larry Weaver Farm, 641 Spruce Rd., New Holland
* A rep will come to your farm

ATTENTION 41 GROWERS:
Old or new 41 crop, hanging or baled - call Trileaf before you sell.

Working with Vector is your local tobacco company:

Okla. National Stockyards

Oklahoma City, OK
February 7, 2001
Report Supplied By USDA

Compared to last week: Feeder steers and heifers steady to 2.00 higher with late moderate demand. Demand for feeders good early in the sale as light receipts from the previous week had buyers battling for numbers. However those quickly remembered the muddy mess that many feedlots were in and buyers backed down. Stocker cattle and calves sold 2.00-4.00 higher with very good demand. With temperatures in the low sixties a hint of spring was in the air. Farmers are anxiously waiting to turn cattle out on spring pastures. Quality plain through attractive. Weigh-ups average. Feeders in medium to fleshy conditions; calves and stockers in thin to moderate flesh conditons. Slaughter cows weak to 1.50 lower. Slaughter bulls steady to 1.00 lower. Packer demand moderate. Several dispersals of bred heifers and cows included. Demand very good for cows returning to the country. Total of 675 cows and bulls sold with 25 percent going to packers. Receipts this week 11,509; last week 5289; last year 11,151. Supply consisted of 59 percent yearlings over 600 lbs; 35 percent calves and light yearlings under 600 lbs; 6 percent cows and bulls.

Heifers comprised 36 percent of feeder and calf supply.

Prices follow with weighted average weight and price in parenthesis.

Feeder Steers: Medium and Large 1 300-400 lbs (350 lb) 119.00-128.00 (124.79); 400-450 lbs (431 lbs) 110.00-117.50 (113.29); 450-500 lbs (472 lbs) 106.50-114.50 (110.67); 500-550 lbs (530 lbs) 99.00-109.00 (104.78), Thin (512 lbs) 110.00-115.50 (113.47); 550-600 lbs (572 lbs) 93.50-102.00 (96 62); 600-650 lbs (620 lbs) 90.50-96.00 (93.30); 650-700 lbs (676 lbs) 87.00-92.50 (89.03); 700-800 lbs (750 lbs) 84.00- 90.50 (86.17); 800-850 lbs (817 lbs) 81.00-85.75 (82.47); 850-900 lbs (886 lbs) 80.00-83.00 (80.94), load fleshy 77.00; 900-950 lbs (927 lbs) 74.50-77.00 (75.38).

OPINION

Take Your Breath Away

The technical genetic advances made in dairy cattle are staggering.

Most people are too young to remember the 1953 bull catalog of the Southeast Pennsylvania Cooperative. And the Lucifer bull also means nothing to you. But to us old dairymen, Lucifer was the benchmark bull of the era and formed the backdrop for the Ivanhoe bull that made his daughters tall on top of Lucifer's daughters of strength. By some breeding ingenuity there was still an Ivanhoe daughter in a recent Pennsylvania Holstein state sale.

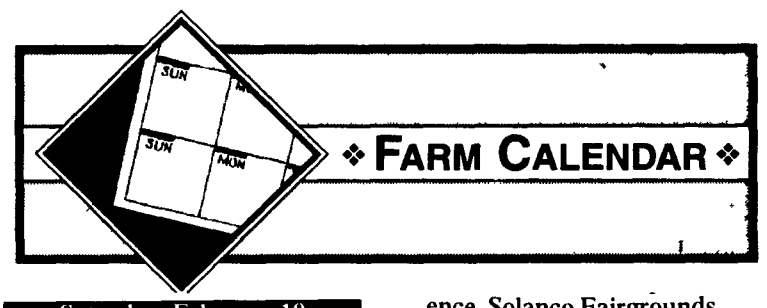
The reason we mention it is because Lucifer had a proof just over 12,000 pounds of milk. His daughters matured slowly and would never have been kept in today's atmosphere of "disposable heifers" that are expected to give all their milk in the first or second lactation.

Of more importance is the contrast in this 50-year record of dairy history. Now the high production, on the average, expands into the incredible future ahead for cloning the best animals to be the seed stock in tomorrow's herds.

Here's an example of how far we have come.

On September 7, 2000, Hanoverhill Starbuck II was born. Starbuck II is the clone of the famous Starbuck with all those All-American and All-Canada offspring. Starbuck II is expected to be available by the next World Dairy Expo.

So there you have it. The incredible history of the dairy industry wrapped in biotechnology. And the possibilities in the future can only take your breath away.



❖ FARM CALENDAR ❖

Saturday, February 10

Beginning Bee Seminar, Mercer County extension office, Mercer.

Pennsylvania Shorthorn Breeders' Association annual meeting, New Staunton.

Great Chef's Marathon, Reading Terminal Market Kitchen, 9 a.m.-4 p.m.

Sunday, February 11

Monday, February 12

Poultry Management and Health Seminar, Kreider's Restaurant, Manheim, noon.

Capitol Area Turf and Ornamental Winter School, Grantville Holiday Inn, 8 a.m.-3:10 p.m.

New York State Vegetable Conference, Holiday Inn and Convention Center, Liverpool, N.Y., thru Feb. 15.

Southeast Pennsylvania Grazing Conference, Hoffman Building, Solanco Fairgrounds, also Feb. 13.

Cornucopia 2001, Capitol Building, Harrisburg, noon.

Tuesday, February 13

Solanco Young Farmers Meeting, Custom Crop Production, Solanco High School, 7 p.m.

New York Vegetable Conference, Holiday Inn and Convention Center, Syracuse, N.Y.

Northeast Fruit Growers' Meeting, Iron Skillet Restaurant, Avoca, 8:30 a.m.

Tractor Safety Course, Deerfield Ag and Turf, Watsontown, 6 p.m.-8 p.m.

Conservation and Pesticide Update Meeting, Neshaminy Manor Center, Doylestown, also Feb. 20, 7:15 p.m.-9:30 p.m.

Dairy Market Outlook, Berks County Ag Center, 10:30 a.m.-2 p.m., and 7:30 p.m.

Southeast Pa. Grazing Conference, Solanco Fairgrounds.

Pork Quality Assurance Certification, Kish Valley Buying Station, Belleville, 7 p.m.

Schuylkill County Vegetable Meeting, Pottsville, 9 a.m.-3:30 p.m.

Well Plugging Program, Warren County, Jefferson DeFrees Family Center, 2 p.m.

NCC Farmers Breakfast Meeting, ChesDel Diner, 7:30 a.m.-9:30 a.m.

Pesticide Update/Conservation Meeting, Neshaminy Manor Center, 7:30 p.m.-9:30 p.m., also Feb. 20.

Empire State Potato Growers' Meeting, Holiday Inn and Hotel, Liverpool, N.Y., 7:30 a.m.

Wednesday, February 14

2001 Southwest Beef Management Workshop, Session 3, Cedarbrooke Golf Course, Belle Vernon, 7 p.m.-9:30 p.m.

Dairy Marketing Outlook and Future, Montgomery County 4-H Center, 10 a.m.-1 p.m.

Tree Fruit Meeting, Berks Ag Center, Leesport.

Vegetable and Small Fruit Meeting, Family Heritage Restaurant, Franconia.

Penn State Corn Planter Clinic, Penn State's Ag Arena, 10 a.m.-3 p.m.

TMR Workshop, Dennis and Todd McHenry Farm, New Bethlehem, noon-3 p.m.

Landscape Seminar, Luzerne Community College Conference Center, Nanticoke, 9:15 a.m.

Bucks-Montgomery County Dairy Day, Montgomery County 4-H Center, Creamery, 10 a.m.-1 p.m.

Clarion County Feeder Workshops, Todd and Dennis McHenry Farm, New Bethle-

Now Is The Time

By John Schwartz

Lancaster County Agricultural Agent

To Look At Burning Corn

When the price of corn is low and the price of energy is high, farmers may wonder if it would be cheaper to burn shelled corn rather than propane.

The answer, according to Dr. Dennis Buffington, Penn State agricultural engineer, is "it depends."

Buffington has developed a chart to help people to decide whether to burn shelled corn or propane.

To use the chart, find where the intersection point of the value of shelled corn and the price of propane meets. The territory where the intersection point falls tells you whether it is cheaper to burn shelled corn or propane.

In late 2000, when corn had a value of $2 per bushel and propane cost about $1.30 per gallon, the intersection fell in the "burn corn" territory. On the basis of combustion values, it is cheaper in this case to burn corn than propane.

When developing this chart, Dr. Buffington assumed the heating value of shelled corn at 31,000 BTU per bushel, the heating value of propane at 91,600 BTU per gallon, the combustion efficiency of corn at 75 percent, and the combustion efficiency of propane at 85 percent.

To obtain graphs or for additional information, contact Dr. Dennis Buffington by phone at (814) 865-2971 or by e-mail at deb2@psu.edu.

To Consider Costs Of Burning Corn

Before you switch to burning shelled corn, you will need to do some homework to find out how much it will cost to make the transition.

Additional expenses include burner modifications and handling and storage facilities for the corn. These expenses are not trivial and must be considered before any plans are finalized.

Dr. Dennis Buffington, Penn State agricultural engineer, suggests that farmers consider having two different burners to switch between, depending whether prices fall in the burn corn or burn propane territory. You may want to consider burning last year's corn or corn of a lesser quality. Homeowners who have their own heating system, particularly wood stoves that burn wood pellets, could also burn shelled corn.

Burning corn smells good, like baking corn muffins. It is easier to handle than wood.

Check with the company that manufactured your wood stove to find out what accessories are available to make the transition to pellets and/or corn. The heating value of 63 bushels of shelled corn is equivalent to one cord of firewood.

To Educate Middle School Students

People for the Ethical Treatment of Animals (PETA) have stepped up their activities, targeting middle school students.

PETA is beginning to hand out cards that look like sport trading cards that display animal rights messages. They are targeting middle school students because they are more open to receiving the cards.

PETA's latest campaign is the distribution of antimilk trading cards to preteen students. There is no question that the young teen set is a key audience for PETA and others wanting to deliver an extreme animal rights message.

What are you doing to tell the agriculture message to students? By not responding, we are giving creditability to PETA's message. We need to support ag in the classroom and similar agricultural education programs. We need to monitor activities and what is being taught in the classroom.

We need to develop a dialog with school administrators, teachers, and school board members about the importance of food production and local agriculture. If we do not tell our story, someone else will tell one for us!

Feather Prof's Footnote: "Our lives are not determined by what happens to us, but how we react to what happens."

THE BIBLE SPEAKS

BY LAWRENCE W. ALTHOUSE

TRUE GREATNESS

Background Scripture:
Luke 22:1-30.
Devotional Reading:
Mark 10:25-45.

Over the years, I have noted that sometimes the most profound moments in life are followed by the silliest, most shallow reactions.

Many years ago in the parish I was serving, we scheduled an administrative board meeting of the church to take place shortly after the Maundy Thursday communion service. For the life of me, I cannot imagine why we did that, but we did and it was a disaster.

Not more than 20 minutes after the conclusion of what I thought was a moving service of holy communion, the board meeting broke out in a verbal brawl over some aspect of the church's building project. That night, after the meeting was over, I went home in a deep sense of depression.

Then, however, I realized that something similar had happened on the night of the first Maundy Thursday, the night when Jesus introduced his twelve disciples to what would become the most profound sacrament in Christendom. What moment more holy could Jesus and his disciples share than the Passover breaking of bread and sharing the cup?

But how did the disciples react to this profound experience? They quarreled over "which of them was to be regarded as the greatest"(22:24)!. How could they have been so childish and ego-driven? The answer: it came easily to them — as it does to us.

William Barclay has commented upon this passage: "It is one of the most poignantly tragic things in the gospel story that the disciples could quarrel about precedence in the very shadow of the cross." Instead of feeling humbled by the momentous night and what it portended for Jesus, they let their egos run wild.

Where To Sit

The momentous issue was of where they were to sit at the Passover table. Normal custom dictated that the tables were to be formed into the shape of an inverted "U," with the host sitting in the center of the bend of the "U." To his right would sit the most honored guest and to his left the next most honored guest. Back and forth from right to left the most honored guests were seated. The least important were those who sat at the bottom of "U." I assume that the dispute arose when the disciples began to jockey for positions of honor.

I think we may safely assume that Jesus had already spoken to them about humility and the preference of humble service. If he did, it evidently did not make much of an impression on them. You and I may find it difficult to think that his disciples would openly argue on this matter. We would be much more likely to feel what they felt, but keep it to ourselves, for we wouldn't want Jesus to realize how egotistically we could behave. Today we are not ashamed to want to be first, so long as it doesn't seem like we are acting that way.

Although we have learned to be more subtle about it, our problem today is still very much the same. No less than the twelve disciples themselves, we have not grasped the teaching of Jesus that the standards of the kingdom of heaven are not the standards of this world. As in almost everything else, Jesus revolutionized the standards for greatness: "... let the greatest among you become as the youngest, and the leader as one who serves."

A Living Example

I might have trouble accepting that teaching from most people, but Jesus himself was the living example of what he asks of us: "I am among you as one who serves" (18:27b).

Jesus did not consider serving others as demeaning. Humble service was not something enforced, but chosen. As Martin Luther put it, "A Christian man is the most free lord of all, and subject to none; a Christian man is the most dutiful servant of all, and subject to everyone." That is what true greatness is — humble service after the example of Jesus Christ.

Let us also understand that humble service is not just for those with the most spectacular gifts. Frederick William Robertson wrote: "It is not the possession of extraordinary gifts that makes extraordinary usefulness, but the dedication of what we have to the service of God."

The widow's mite was a more important gift than the rich man's gold coin. The question of discipleship is not "who is most gifted?" but "who serves most with the gift he or she has been given?" That is true greatness.

Stream Bank Fencing Is Conservation that PAYS TWICE!

1. Receive $3,800 to $35,000 ABOVE COSTS for each half mile of stream you enroll in USDA buffer programs. See details for your area below.

2. Gain the benefits of stream bank fencing:

- ***Improved herd health:*** Clean, dry cattle are healthier cattle. Wet, muddy conditions increase the risk of udder infections, foot problems and numerous other diseases spread by these conditions. Controlled access at stabilized crossings also reduces injuries from steep, slippery banks or rocky creek bottoms. Better water quality means better drinking water and higher production.

- ***Options for pasture management:*** Stream bank fencing splits a typical pasture in two. Once the electrified stream bank fence is in place, creating additional paddocks is cheap and easy. Improved management options can significantly increase the efficiency of pasture use.

- ***Good public relations:*** Agencies and the public are increasingly aware of farm management, especially around streams. Stream bank fencing is a big step in protecting streams and being a good neighbor.

- ***Good stewardship:*** Stream Buffers provide habitat for wildlife including songbirds, waterfowl and game animals. Improvements to fish habitat are large and rapid. Reduced bank erosion protects fields, buildings, lanes and bridges.

Generous funding now allows landowners to install stream bank fencing at a net financial gain.
Stream bank fencing truly is conservation that PAYS TWICE.
Act soon. Some programs have a limited life span and can enroll a limited number of acres.

Estimated Payments for a Typical Stream Bank Fencing Project

All estimates are based on 50' buffer width (top of bank to fence) on both sides of a half-mile of creek. Such a project encloses 6 acres of buffer and typically costs $15,000-20,000 per half-mile of stream. Estimates below are based on the typical 15-year agreement length.

Width requirements: USDA programs have a 35' minimum buffer width, but the added CBF/DU contribution only applies to buffers 50' or wider. CBF/DU's Habitat Stewardship Program has a minimum buffer width of 15'.

Done with USDA's
Continuous Conservation Reserve Program (CCRP):
(available statewide)

50% cost-share from FSA, 40% incentive payment from FSA on all eligible costs
$35-90/ac annual rent & maint. payment from FSA (varies w/soil type & project details)
A typical project pays about $3800 above costs for every half mile of stream.

Done with USDA'S
Continuous Conservation Reserve Program (CCRP)
In Partnership with Chesapeake Bay Foundation & Ducks Unlimited:
(available in Chesapeake Bay watershed)

50% cost-share from FSA, 40% incentive payment from FSA on all eligible costs*
25% implementation payment from Chesapeake Bay Foundation and Ducks Unlimited
$45-135/ac annual rent & maint. payment from FSA (varies w/soil type & project details)
A typical project pays $6000 to $14,000 above costs for every half mile of stream.

Done with USDA's
Conservation Reserve Enhancement Program (CREP)
(In partnership with PA DEP, CBF and DU:
(20 south-central PA counties)

50% cost-share from FSA, 40% incentive payment from FSA on all eligible costs*
50% cost-share from PA Department of Environmental Protection
25% implementation payment from Chesapeake Bay Foundation and Ducks Unlimited
$85-260/ac annual rent & maint. payment from FSA (varies w/soil type & project details)
A typical job pays $19,000 to $35,000 above costs for every 1/2 mile of stream.

While stabilized crossings are currently eligible, they may not be in the future.
Act soon to maximize your benefits.

If interested in any of these USDA programs, contact your county FSA office.

Done with
Chesapeake Bay Foundation & Ducks Unlimited's
Habitat Stewardship Program:

Available in bay watershed to address limitations in USDA programs for landowners wanting to:

- create buffers in areas with existing trees
- create buffers with a 15' minimum width
- fence wetlands where there is no stream
- fence wetlands wider than 180' from a stream
- work with a non-governmental organization

Pays 100% cost-share on fence (up to two wires) and plantings.
Provides BMP credits (typically $1000/ac)
for buffer area beyond the 15' min width.
Landowner pays for any crossings.

A typical 50' wide project earns credits to pay for crossings with $1840 leftover credits for every half mile of stream. Remaining credits can be used to pay for many other BMPs

If interested, contact your county conservation district or CBF at 717-234-5550.
Outside bay watershed, call DU: Delaware Basin 570-476-5398, Ohio/Erie/Genesee 814-386-3458

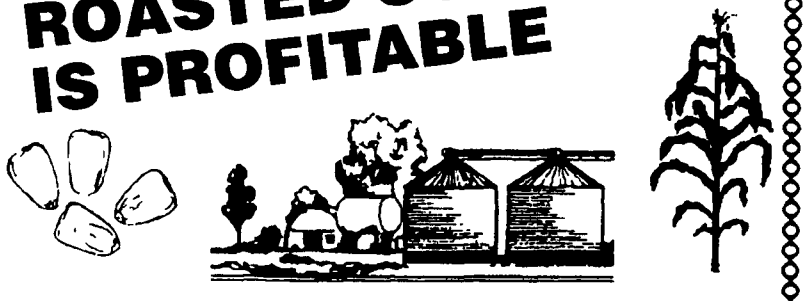
ROASTED CORN IS PROFITABLE



~ **Earlier Harvest** - Roasting and drying are done simultaneously.

~ **Higher Digestibility** - 10% more available energy.

~ **Purer Feed** - Removes molds and reduces toxins.

~ **Drier Total Ration** - Better Rumen Health.

~ **Greater Profits** - Advance two to eight lb. per cow in milk with improved fat and protein.

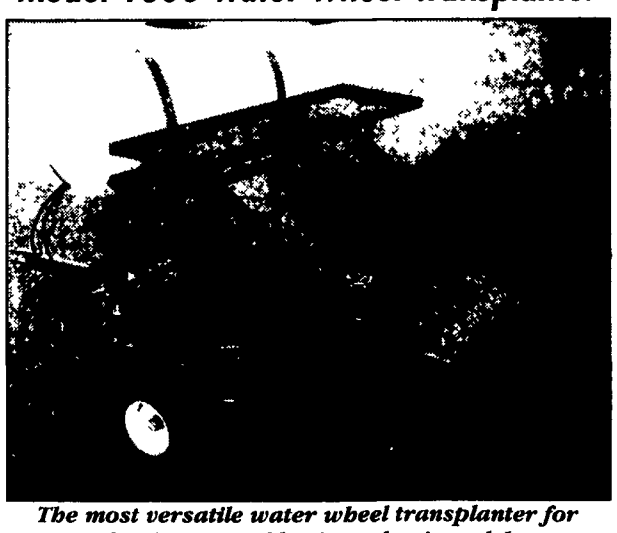
ALL *NEW* FROM RAIN-FLO IRRIGATION

Model 1600 Water Wheel Transplanter



The most versatile water wheel transplanter for planting vegetables into plastic mulch.

COMPARE THESE FEATURES BEFORE YOU BUY:

- Quick change water wheel setup
- Extra row width from 8" to 36" is standard equipment, use one to four planting wheels.
- Less operator fatigue with new lower seat profile
- Lifetime warranty on UHMW planting wheel bearings
- Four slant trays is standard equipment, optional top tray
- Full open back, no bar to step across to access planting wheels
- More Leg room, easy foot rest adjustment, no wrench needed for seat height and width adjustment
- Side valve for washing hands.
- High flow 1" valve for 3–4 Rows
- Larger wheels with highway bearings and tires
- Will plant through 60" row centers
- Optional side ladder for filling water tank

Weekly Dairy Market Outlook

By Ken Bailey
Penn State University
February 2, 2001

USDA Issued an Injunction

-Cannot issue separate butterfat prices

-January 2001 prices announced

-General price trend is higher

USDA was issued an injunction on January 31, 2001 regarding the implementation of the new class formula prices contained in an interim final amendment. U S. District Court Judge Royce C Lamberth enjoined USDA from implementing portions of the interim final amendments to Federal milk orders that became effective Jan.1, 2001.

USDA's plans to implement changes in federal order prices created quite a stir in the dairy industry There was little support from dairy producers and their cooperatives and from processors In short, the injunction prevents USDA from implementing their new plan to have separate butterfat prices for Class III and IV milk. This would have resulted in separate market prices for cream depending on use And, it would have resulted in a significant reduction in protein prices for dairy producers

At this stage the only thing we do know is that USDA will only be able to implement a few minor changes in their pricing formulas These include the switch from 39 to 38 percent moisture in NASS reporting of barrel prices, and minor changes in the economic formulas (so called "make allowances")

A complete analysis of the impact of the USDA's final rule on the Northeast was issued by Penn State University last week along with a comment letter to USDA (see my webwite:

http //www.aers psu edu/dairyoutl ook/FedOrderData/MilkPriceMod el htm)

USDA announced January 2001 class prices under federal milk marketing orders. These prices were computed using the formulas in the U S District Court's preliminary injunction order dated January 31, 2001 The formula prices are driven by dairy commodity prices Butter prices fell sharply from $1 4698 per pound in December 2000 to $1 1725 in January 2001 Cheese prices rose from $1 0898 per pound in December 2000 to $1 1180 in January 2001

Due to these changes in commodity prices, Class III prices rose in January and Class II and IV prices fell The Class II price at 3.5 percent butterfat fell sharply from $13 97 per cwt in December 2000 to $12 82 in January 2001 Likewise, Class IV prices fell from $13 27 per cwt in December 2000 to $12.13 in January 2001. Class II and IV prices are sensitive to changes in butter prices. The Class III price rose from $9.37 per cwt in December 2000 to $9.99 in January 2001. The Class III price is sensitive to changes in cheese prices.

The dairy futures markets at the Chicago Mercantile Exchange are still showing price strength As of February 1, 2001, the market is expecting Class III prices to peak at $12 05 per cwt by August. And, the market is expecting Class IV prices to peak at $13.10 per cwt by September. As I stated last week, I can't exactly predict what milk prices will be the rest of the year. In reality they will either be higher or lower than these prices. However, that said, the current futures prices for March through December are pretty good prices and some producers may want to lock in a portion of their milk supply.

And finally, on a more humorous note, I spoke at the annual meeting of the Mt. Joy Farmers Cooperative in Southeast Pennsylvania. When the general manager Dale Hershey gave his report, he was kind enough to read a quote from my column. In front of 240 dairy producers he said, "according to Ken Bailey, and folks this is a direct quote, 'milk prices in 2001 will be either higher or lower'." End of quote.

Let's just say he got quite a laugh from that one!

For more information regarding milk markets, see my website at: www.aers.psu.edu/dairyoutlook/

Average Farm Feed Costs for Handy Reference

To help farmers across the state to have handy reference of commodity input costs in their feeding operations for DHIA record sheets or to develop livestock feed cost data, here's last week's average costs of various ingredients as compiled from regional reports across the state of Pennsylvania.

Remember, these are averages, so you will need to adjust your figures up or down according to your location and the quality of your crop.

Corn, No.2y — 2.20 bu., 3.93 cwt.
Wheat, No.2 — 2.43 bu., 4.05 cwt.
Barley, No.3 — 1.54 bu., 3.30 cwt.
Oats, No.2 — 1.36 bu., 4.25 cwt.
Soybeans, No.1 — 4.29 bu., 7.17 cwt.
Ear Corn — 59.21 ton, 2.96 cwt.
Alfalfa Hay — 96.25 ton, 4.81 cwt.
Mixed Hay — 93.75 ton, 4.69 cwt.
Timothy Hay — 80.00 ton, 4.0 cwt.

Milk Marketing Board Announces January Class I Price

HARRISBURG (Dauphin Co.) — The Milk Marketing Board (MMB) announced the prices to be paid to Pennsylvania dairy farmers for January Class I milk (beverage) as an average of $18.04 in the western areas of the commonwealth, and an average of 18.53 in the central and eastern areas of the commonwealth.

However, the price received by an individual dairy farmer will vary as the component composition of a farm's milk differs from the established benchmarks of 3.5 percent butterfat, 2.99 percent protein, and 5.69 percent other solids.

These prices do include the current over-order premium of $1.40 per one hundred pounds of milk, and the fuel adjustment premium of $.25 per one hundred pounds of milk.

Since 1988, the MMB has mandated over-order premiums on Class I milk due to adverse conditions affecting the Pennsylvania dairy farmer.

Chairwoman Beverly R. Minor announced that since the inception of the MMB's over-order premium in 1988, Pennsylvania dairy farmer have received $222,752,000 in additional income.

Farm Bureau Announces Legislative Priorities for 2001

GLENMONT, N.Y. — New York Farm Bureau, the state's largest general farm advocacy organization in the state, recently announced its legislative priorities for the upcoming year.

At their State Annual Meeting held last month in Buffalo, New York Farm Bureau Delegates voted upon their federal and state policies for the year 2001. Policies are developed originally at the County level, and then make their way up to the State Annual Meeting. Farm Bureau leaders then select priority issues from the over 1,000 member driven policies.

Legislative priorities are based on several factors, such as whether the issue has a broad-based agricultural impact; is of significant interest to county Farm Bureaus; impacts farmers' ability to conduct business; attracts active member participation and has a reasonable chance of being resolved.

The 2001 legislative priorities for New York Farm Bureau are as follows:

Federal Priority Issues

Dairy

Continue to work toward expanding the Northeast Interstate Dairy Compact to include New York; establish a Southeast Dairy Compact; and support legislation that prohibits the use of ultra-filtered milk in cheese making. We will also engage in a critical review of the impact of imported milk solids into our markets; and work to modify the unified strategy on Concentrated Animal Feeding Operation's by the Environmental Protection Agency (EPA).

FQPA Implementation

Actively monitor EPA's risk assessment of pesticides used to protect New York crops, providing comments consistent with Farm Bureau policy, and pursue active communication between Farm Bureau and EPA. We will continue participation in statewide coalitions to monitor FQPA's impact on New York agriculture.

Labor

Secure passage of a guest worker program and H2A reform. We will address agricultural worker supply issues; work with coalitions to obtain a freeze on the Adverse Effect Wage Rate; and continue to monitor ergonomic standards implementation and other initiatives that would have a negative impact and place unnecessary restrictions on agricultural employers.

Trade

Continue to work with New York commodity organizations on trade issues and support the efforts of Northeast coalitions for equal consideration of all U.S. crops during trade negotiations; and work with USDA to quantify the impact of imports on New York agriculture.

Continue to work with New York commodity organizations, the Department of Agriculture & Markets and our congressional delegation to identify and rectify unfair trade practices having a negative impact on our producers.

Risk Management/Market Loss Assistance

Develop a Northeast coalition to identify and support necessary changes to current crop insurance programs; secure direct financial assistance for weather related crop disasters; and pursue a voluntary based conservation program to enhance the viability of agriculture while preserving open space and clean water.

We will also work to establish proactive risk management tools as "eligible projects" under the Risk Management Act of 2000.

State Priority Issues

Agricultural Investment

The agricultural industry needs to be a significant part of the state's plans to revitalize the economy in upstate New York. We support full funding of the Agricultural Initiative and Grow New York, a promotion, marketing and research program administered by the Department of Agriculture and Markets.

Environmental Protection Fund

Increased funding is needed to address the tremendous pressure on agriculture in urbanizing areas. Additional funding is also needed to assist farmers in meeting environmental regulations for non point source pollution prevention. Farm Bureau will work to increase the farmland protection and the non point source pollution prevention funding sources in the Environmental Protection Fund.

Civil Justice Reform

Support of legislation to rectify the current abuses of New York's Civil Justice system and liability initiatives consistent with Farm Bureau policy. Equine inherent risk legislation and liability relief for U-Pick organizations are vitally important to reduce the high cost of liability insurance for New York farmers.

School Property Tax Credit

Support inclusion of Christmas tree growers and rented land within the School Property Tax Credit, expansion of STAR to all farms, and the inclusion of "C" corporation family farms in the School Property Tax Credit.

Agricultural Biotechnology

We recommend full support for the Gen★NY★Sis initiative, designed to promote New York as a leader in biotechnology research and innovation; and the continued investment in life sciences, particularly the applied research into agricultural biotechnology. We also recommend full public disclosure of all research results, so that the public may be better educated on the benefits and risks of biotechnology.

Additional information is available on all of the above mentioned issues by calling New York Farm Bureau at (518) 436-8495.

Brown Swiss Association Report

BELOIT, Wis. — Rita Kennedy, of Butler, Pa., a member of the national Brown Swiss Association Board of Directors, recently returned from their annual board meeting held in Beloit, Wisconsin, Jan. 20-21, 2001.

Kennedy and her fellow directors are pleased to report that a total of 10,648 head of Brown Swiss cattle were registered in 2000, compared to 10,031 in 1999, which represents a healthy increase of 617 registrations. Transfers in 2000 were strong as well as they totaled 5,166 compared to 4,496 in 1999, which represents an increase of 670 transfers.

The Brown Swiss Association welcomed 965 first-time buyers of Brown Swiss cattle in 2000, up from 951 in 1999, which represents an increase of 14 over last year.

According to Brown Swiss Executive Secretary John M. Meyer, "The main reason the Brown Swiss breed is gaining popularity so quickly is the fact that current milk pricing practices favor Brown Swiss. In fluid markets, Brown Swiss produce enough high-protein milk to make it a coveted milk for fluid milk processors, and in cheese markets, the high pounds of protein and good component percentages make it the ideal milk for cheese making.

Additionally, as dairy farmers look for more milk, protein, and increased productive life, Brown Swiss is the logical choice. Another drawing card is the fact that Brown Swiss is only the second dairy breed to average over 20,000 pounds of milk per year."

Brown Swiss Enterprises, the marketing arm of the national Brown Swiss Association, had a busy year as a result of the changeover many dairy producers are making to Brown Swiss.

Ridge's Budget Proposal Called Good For Ag

(Continued from Page A1)

Increased funds are also proposed for agri-marketing programs provided by the Department of Agriculture.

Reflecting the "Products for the Planet" theme introduced by the Department of Agriculture, the proposed budget provides a $108 thousand increase for the promotion of agriculture. The Department works to promote agriculture though several programs, such as "Pennsylvania Produce ... Simply Delicious," for the vegetable and fruit growers, the annual international agriculture celebration known as AGRO, trade missions, and commodity promotion.

"County fairs, the All-American Dairy Show and the Keystone International Livestock Exposition will receive increases so Pennsylvania can be a leader in providing strong agricultural expositions," Hayes said.

The Department of Agriculture will receive in excess of $517,000 to be dedicated to laboratory and operational equipment that is necessary to carry out the scientific and program tasks.

"Pennsylvania agriculture is productive and provides the best public food programs in America though initiatives such as the state food-purchase program, which receives a proposed increase. This is good for those in need and it is good for our farmers who sell the food," Hayes said.

An increase of $450,000 dedicated to helping human care agencies such as food banks will go to the Agriculture Department's Bureau of Food Distribution and its state food-purchase program, which is the leading program of its kind in the nation.

Stray voltage is a concern of the dairy industry. The proposed budget contains funds to seek a response to this problem.

"Whether you consider important themes like tax cuts and education or specific things in agriculture, this budget provides an excellent fiscal base for the Legislature to begin lawmaker deliberations, Hayes said. "For sure, the Governor's proposed budget is a reach for greatness. And our state legislature is supportive of agriculture. So, I am very pleased and optimistic as we approach the upcoming fiscal year."

THE LEADER IN THE FIELD

Pennsylvania Wins National Farmland Protection Award

WASHINGTON, D.C. — American Farmland Trust, a national farmland conservation group, recently presented Governor Ridge and the state of Pennsylvania with a national achievement award for farmland protection.

The award recognizes Pennsylvania for having protected the most farms and farmland of any state in the nation.

Pennsylvania's Farmland Preservation Program, which is publicly funded, has permanently protected nearly 1,400 farms and more than 180,000 acres of farmland. This year alone, the state protected nearly 300 farms — the most preserved during any one-year period since the program's inception.

"Under Governor Ridge's leadership, Pennsylvania emerged as the number one state in farmland protection," said Ralph Grossi, president of American Farmland Trust.

"Pennsylvania has responded to the challenge facing all of America — the conversion of high quality farmland to other uses. It has increased its investment in farmland protection, developed new planning tools for local governments, and recognized the tremendous social, environmental and economic contributions that agriculture makes to our communities," Grossi said.

"As the result of our accelerated efforts in 2000, Pennsylvania is proud to be in sole possession of first place in America's farmland preservation league. It has been a great team effort," said Pennsylvania Agriculture Secretary Sam Hayes.

"Pennsylvania encompasses part of the second most threatened agricultural landscape in America, the Northern Piedmont," said Mary Heinricht, American Farmland Trust's Mid Atlantic regional director. "By successfully protecting so many farms at such a rapid pace, Pennsylvania has shown neighboring states that it is possible to accommodate growth while preserving the economic base that farms and farm business provide."

Created in 1989, the Pennsylvania Agricultural Land Preservation Board oversees the state Farmland Preservation Program, which allows the state and counties to purchase develop rights, or easements, on farmland. The program compensates landowners for the development value of their land while permanently protecting the land for agriculture.

Across the nation, publicly funded farmland protection programs like Pennsylvania's Farmland Preservation Program are increasingly used as a buffer against unplanned growth. From February of 1999 to April of 2000, state farmland protection programs expanded by 17 percent in acres protected and 58 percent in available funds.

Delmarva Goat Symposium

SALISBURY, Md. — Many small and part-time farmers in the Mid-Atlantic area are finding that with increasing ethnic diversity in nearby metropolitan areas, goats can form the basis for a worthwhile agricultural enterprise.

Making such an enterprise profitable is the purpose of the first-ever Delmarva Goat Symposium. Goat producers and other interested persons from throughout the Mid-Atlantic area are welcome to attend.

The symposium is scheduled on Sat., Feb. 17, from 9:30 a.m. to 3:30 p.m. in Henson Hall (Room 105) at Wor Wic Community College. The college is located a short distance east of Salisbury — on Maryland's lower Eastern Shore — along U.S. Highway 50, just past the Arthur W. Perdue stadium.

Maryland Cooperative Extension and the Lower Shore Goat Producers Association are sponsoring the daylong event, with financial support from USDA Sustainable Agriculture Research and Education (SARE) Chapter 3 funds.

Speakers from Maryland, Pennsylvania, Delaware and Virginia will be on the day's program. Dr. Tim Mears of Crimora, Va., a veterinarian and Boer goat producer in the Shenandoah Valley, will speak about goat health or Robert Herr, Ph.D., of Narvon, a goat broker and feedlot operator in eastern Lancaster County.

Gary Hornbaker, Loudoun County extension ag agent from Leesburg, Va., will describe a teleauction livestock marketing association for lambs and goats that helped to organize. Commercial exhibits and door prizes also will be included in the day's activities.

A registration fee of $10 per person will be charged for adults, $5 for youth, or $15 for two adults from the same family. The fee includes lunch, refreshment breaks and resource materials. The luncheon menu will feature various goat meat samples prepared by Maryland Cooperative Extension family and consumer science educators.

Registration by Monday, Feb. 12, is recommended to assure a seat at the symposium. Call the Wicomico County Extension office in Salisbury at (410) 749-6141, or send an e-mail message to ss80@umail.umd.edu.

Checks should be made payable to the Wicomico EAC and mailed to P.O. Box 1836, Salisbury, MD 21802-1836.

Filson Named Regional Director For Penn State Cooperative Extension And Outreach

UNIVERSITY PARK (Centre Co.) — Dave Filson has been appointed regional director for the south central region of Penn State Cooperative Extension and Outreach.

Filson will provide programmatic and administrative leadership for cooperative extension and coordination for university outreach programs in the region's nine counties: Bedford, Blair, Cambria, Fulton, Huntingdon, Juniata, Mifflin, Perry, and Somerset.

According to Ted Alter, associate vice president for outreach and director of Penn State Cooperative Extension, Filson brings a 17-year record of dedicated and exemplary service as an extension educator, county extension director and director of Penn State's Juniata Valley Outreach Center to his new position.

Filson joined Penn State in 1984 as an agricultural agent in Mifflin County. In 1991, he was named county extension director for Mifflin and Juniata counties. Since 1998, he also has directed Penn State's first Outreach and Cooperative Extension Center.

Filson received his bachelor's degree in agronomy and master's degree in extension education from Penn State.

Filson will be based at the South Central Region Cooperative Extension office in 215 Lubert Building, University Park. The region's Website can be found at http://www.extension.psu.edu/scregion/.

USDA Approves Video Imaging Beef Grading Tool

WASHINGTON, DC — The Agricultural Marketing Service recenty announced procedures for approving video imaging instruments for use in determining USDA beef yield grades.

USDA yield grades identify the "quantity" or "cutability" differences among carcasses. Yield grades (YG) are 1, 2, 3, 4 and 5, and are a numerical representation of the expected percentage of closely trimmed, boneless retail cuts from the round, loin, rib and chuck. This percentage of retail cuts is the carcass cutability. YG1 is the leanest and produces the highest cutability and YG5 is the fattest and produces the lowest cutability.

The use of video imaging instruments to measure ribeye muscle size — a major factor in determining the yield grade — should allow for increased precision in the determination of yield grades and provide industry a tool to more accurately measure the value of beef carcasses.

AMS in conjunction with an industry working group consisting of representatives of the beef production and packing industries, academia, and an instrument manufacturer, developed procedures for approval and use of the instruments. The procedures are available on the AMS website at: http://www.ams.usda.gov/lsg/ls-st.htm.

A copy may be obtained by contacting Herbert C. Abraham, Chief, Standardization Branch, AMS Livestock and Seed Program, USDA Stop 0254, 1400 Independence Ave. SW, Washington, D.C. 20090-0254; telephone (202) 720-4486. They are also available on the AMS website at www.ams.usda.gov/lsg/ls-st.htm. Comments may be submitted to the above address, by fax (202) 720-1112, or e-mail at herbert.abraham@usda.gov.

Presidential Emergency Disaster Declaration

LEESPORT (Berks Co.) — On Nov. 1, President Clinton declared an emergency disaster declaration in New Jersey due to damages and losses caused by the West Nile Virus that occurred on Aug. 5 and continuing.

As a result of this declaration, the entire state was declared eligible for federal disaster assistance including Farm Service Agency (FSA) emergency (EM) loans for eligible family farmers.

Since Bergen, Passaic, and Sussex counties were named as contiguous counties on Oct. 11, under presidential emergency disaster declaration EM3155, for the same disaster, the termination date for receiving FSA EM loan applications is June 11.

Also, in accordance with section 321(a) of the Consolidated Farm and Rural Development Act, counties in adjacent states that are contiguous to one or more of the designated New Jersey counties, are named as contiguous counties where eligible family farmers may quality for FSA EM loan assistance.

For this designation, the affected states and counties are:

New Castle County (DE); Richmond County (N.Y.); and Bucks, Monroe, Philadelphia, Delaware, and Northampton counties (PA).

All other contiguous counties have already been designated/named for the same disaster.

Damages incurred by adverse weather must have taken place during the above mentioned dates. Applications may now be received for physical and production loss, up to the close of business on July 2. The beginning date of the incidence period is July 15.

A farmer must have suffered a qualified thirty percent loss from normal production, be able to generate repayment, be creditworthy, unable to obtain credit elsewhere, have adequate security and obtain multi-peril crop insurance, in addition to other eligibility criteria. Contact the Farm Service Agency (FSA) at the Berks County Agriculture Center, 1238 County Welfare Road, P.O. Box 520, Leesport, PA 19533, (610) 478-7158 for additional information.

Attitude Important, According To Seminar Speakers

MICHELLE RANCK
Lancaster Farming Staff

BLUE BALL (Lancaster Co.) — The proper combination of efficiency, productivity, education, and forethought are a platform for success, according to speakers at a recent agriculture seminar.

On Wednesday several speakers addressed approximately 125 producers on a variety of topics during a seminar sponsored by Blue Ball National Bank at the Blue Ball Fire Company auditorium.

Profitable, Efficient

Richard Waybright, owner and partner in the family-operated Mason/Dixon Farms, Adams County, opened the seminar with a presentation, "Attitude Makes For Success."

Waybright decided long ago that "if we wanted to do something about our profitability, we had to deal with efficiency. We can change how to produce more per hours worked so, in that sense, we are in control of our own destiny," he said.

New techology has, in fact, enabled producers to accomplish more in an hour's work.

Also, don't keep doing things the same way without questioning your methods, advised Waybright.

"We in agriculture fail to learn very well 'why,'" he said. "If we ask ourselves why are we doing it this way, it's amazing how many times the answer is 'because that's the way things have always been done.'

We get in a comfort zone where we know the outcome and we are not sure, if we'd make the change, what the outcome would be."

The future of Pennsylvania's agriculture will be determined by the way the next generation sees the business, believes Waybright, who encouraged parents to motive their children to experiment and allow them to make mistakes.

A recent trip to Cuba opened Waybright's eyes to the opportunities in America. "If you have the right frame of mind, you have a bright future," he said. "We are free, we can use our God-given ability to think for ourselves, and we have a stable government."

Passing On The Farm

Efficiency was also a topic for Charles F. Few. His presentation was thoroughly described in the title alone, "How to Make Sure Your Family Doesn't Get the Family Farm, or How to Name the IRS as Your Favorite Charity."

Few, a certified financial planner for Blue Ball National Bank, is a trust development officer and president of Susquehanna Valley Planned Giving Council.

"Farming is frequently a multi-generational operation, and people rarely sit down and do something about a plan to pass the farm on to the next generation," he said. "Mostly we think we're too busy."

If the farm or business is in both spouse's names, everything will automatically go to the surviving spouse. "Just make sure the surviving spouse never dies," said Few.

A will from the Internet can be a legally-binding document; however, make sure it is a Pennsylvania will, said Few, since each state has different laws regarding wills. Also the one-size-fits-all ap-

Attitude Important, According To Seminar Speakers

(Continued from Page A23)

proach with using a will from the Internet means that the will cannot be tailor-made to your wishes, he reminded the audience.

Few, who said that the last five years have brought many law changes with estate planning, also recommended working with people "you can get back to," such as someone in a nearby area who can answer questions or help with future revisions, rather than a seminar.

Planning minimizes fees. More than 80 percent of all family-owned business in America, according to Few, never make it to the next generation for one primary reason. If a plan is not defined beforehand, the business may have to be sold to pay the estate taxes and fees.

"Each of us has our entire life in which to plan our estates, right up until the day we die, and you can change as often as you want," said Few. "However, if we don't, or won't, take the time to make a plan ourselves, on the day we pass away, the IRS has one already made up that they will use." Failing to plan means the estate will pay the maximum level of taxes legally allowable.

An estate worth $250,00, for example, will pay almost $33,000 in taxes and fees without a plan.

Review and renew a will as often as major changes that affect your finances occur, said Few.

A recent agriculture seminar hosted by Blue Ball National Bank brought together various speakers and bank officials. From left, front row, sit speakers Charles Hosler, Penn State professor; Richard Waybright, owner and partner, Mason/Dixon farms; and Charles Few, bank trust development officer. In the back row, standing left to right: Alan Strock, community banking officer, Gap branch; Kenneth Overly, vice president.

Diversity With Vegetables

"There is a lot of opportunity in produce, but it doesn't come easy," said Jeffrey Stoltzfus, adult farm instructor, Eastern Lancaster County School District.

A Chester County native and resident, Stoltzfus listed 10 reasons produce farmers fail when they begin produce farming.

Not thinking about or making plans for marketing topped his list. Quality difference may also be a downfall, he said, as "there is a big difference from farm to farm and how each producer packs it."

Not investing in current practices such as plastic or a proper spraying system may also prove detrimental to a beginning produce farmer. Another mistake is not anticipating labor needs.

Producers also may not prepare to irrigate. "In our climate, just about everything we grow, you're going to need it at some point. You can get away with it with field corn, but during a dry spell, yield and quality is already lost in produce."

Vegetables are sensitive to timing, said Stoltzfus, and producers must pay attention to plant fertility so they don't end up with "a jungle of vines and no fruit."

If producers do not pay attention or scout for disease or insect problems they can lose a whole crop, said Stoltzfus.

Growers have to be ready to learn, he said. "Every year, there seems to be a different problem — there's always a new challenge."

Keys to success, on the other hand, include knowing resources such as labor, land, and management. Be sure to have enough land for proper rotation plus the necessary skills for "juggling," as the ability to prioritize is integral to successful management.

Know your markets, he advised. Demand, seasonal timing, and quality have a direct bearing on the price buyers pay for produce.

Using the right equipment is also critical. A proper sprayer ensures good coverage under the leaves, a mulch layer will lay a good bed for the produce, and packing equipment are all necessary for a successful produce business.

Find a mentor, said Stoltzfus, someone who grows and knows your crop and can give you advice on marketing or quality issues. Also be ready to learn, ask questions, and observe.

Lancaster is in an opportune area for the produce business, as it is close to ready markets of people willing to buy fresh, local produce.

The acreage of produce in Lancaster has grown every year for the past 20 years, said Stoltzfus, and "we haven't begun to touch the tip of the market."

Also speaking was Professor Charles Hosler, Honeybrook, executive vice president of Penn State University. Hosler holds degrees from MIT and Penn State in meterology. Hosler titled his presentation "How Accurate are the Forecasters?"

In addition professor H. Louis Moore, Penn State professor of farm economics, spoke about his views for the agriculture outlook for 2001.

Chester Co. Holstein Club Plans Barn Meeting

ATGLEN (Chester Co.) — The Chester County Holstein Club is having a barn meeting on Feb. 15 at 7:30 p.m. The host will be the Ken Umble family, (also known as Glen-Valley Holsteins), located in Atglen.

The speaker will be Devlyn Hurley, a classifier from the Holstein association. Anyone is invited to attend and no reservations need to be made.

Come and enjoy an evening of seeing good cows, questioning Hurley, talking to local farmers, and helping yourself to refreshments.

Directions to the farm are as follows: from Parkesburg, take Route 372 West to the last farm on left before Route 41. From Cochranville, take Route 41 North to Route 372 East to first farm on right. From Gap, take Route 41 South to Route 372 East to first farm on right.

Carter Named To National Organic Standards Board

WASHINGTON, D.C. — Rocky Mountain Farmers Union President Dave Carter has been appointed by U.S. Secretary of Agriculture Dan Glickman to serve as a member of the National Organic Standards Board. He will occupy one of two designated posts representing consumers and public interest.

"I am very excited about this opportunity to serve on this board," said Carter. "With recently established organic standards, we have a basis on which organic producers can market their products while establishing a foundation on which consumers can have confidence in the meaning of an 'organic' label."

The National Organic Standards Board was authorized through the Organic Foods Act of 1990. The law allows the secretary of agriculture to appoint 15 members to the board to assist the secretary in developing and implementing standards for substances to be used in organic production and other respects of the national organic program.

Carter, along with other board members, will advise on guidelines to promulgate the recently accounted organic standards.

"The organic side of production is an exciting growth area for farmers," said Carter. "These new standards will allow us to build integrity for the organic marketplace and enhance the integrity and quality of organize products.

Hearing For All Milk Marketing Areas March 7

HARRISBURG (Dauphin Co.) — Pennsylvania Milk Marketing Board (Board) will conduct a public hearing for Milk Marketing Areas 1, 2, 3, 4, 5, and 6 on March 7 at 10 a.m. in Room 202 of the Agriculture Building in Harrisburg.

The purpose of the hearing will be to receive testimony and exhibits concerning the methodology used in the calculation of the over-price premium.

The staff of the board is deemed to be a party to this hearing, and the attorneys representing staff are deemed to have entered their appearances. Other persons that may be affected by the board order establishing the methodology used to calculate the over-price premium may be included on the board's list of parties by:

1. Having their counsel file with the board, by Feb. 14, 2001, a notice of appearance substantially in the form prescribed by 1 Pa. Code +& 31.25, which shall identify by name and address the party on whose behalf the appearance is made.

Thereafter, documents and other written communications required to be served upon or furnished to that party shall be sent to the attorney of record.

2. If unrepresented by counsel and wishing to appear on their own behalf pursuant to 1 Pa. Code +& 31.21, filing with the board by Feb. 14, 2001, an address to which documents and other written communications required to be served upon them or furnished to them may be sent.

The parties shall observe the following requirements for advance filing of witness information and exhibits. The board may exclude witnesses or exhibits of a party that fails to comply with these requirements. In addition, the parties shall have available in the hearing room at least twenty (20) copies of each document for the use of nonparties attending the hearing.

By 4 p.m. on Feb. 21, each party shall file with the board six (6) copies and serve on all other parties one (1) copy of:

- A list of witnesses who will testify for the party, along with a statement of the subjects concerning which each witness will testify. A witness who will be offered as an expert shall be so identified, along with the witness's area or areas of proposed expertise.
- Each exhibit to be presented, including testimony to be offered in written form.

By 4 p.m. on Feb. 23, each party shall file and serve as set forth in paragraph one information concerning rebuttal witnesses and copies of rebuttal exhibits.

Parties that wish to offer in evidence documents on file with the board, public documents, or records in other proceedings before the board, or who wish the board to take official notice of facts, shall comply with, respectively, 1 Pa. Code +& 35.164, 35.165, 35.167, or 35.173.

Requests by parties for board staff to provide data pertinent to the hearing shall be made in writing and received in the board office by 4 p.m. on Feb. 16, 2001.

The filing address for the board is Pennsylvania Milk Marketing Board, Room 110, Agriculture Building, 2301 North Cameron Street, Harrisburg, PA 17110.

Ram, Boar Performance Testing Program Accepts Applications

UNIVERSITY PARK (Centre Co.) — The Pennsylvania Department of Agriculture's Meat Animal Evaluation Center is accepting applications for Pennsylvania's performance testing programs for rams and boars.

At this writing, there are a few pens still available for the Boar Testing Program. The nomination period continues for several more weeks for the Ram Performance Testing program. Applications will be accepted for both fall born ram lambs born between Sept. 1 and Dec. 31; spring born ram lambs born in Jan. and Feb.

The rams nominated will be delivered April 10. They will then be given a seven-day adjustment period. April 17, the rams will be weighed on test. The rams will be weighed every 14 days and progress reports will be sent out to owners and requesting interested parties.

The 84-day test will conclude July 10 and the rams will have their average daily gain, lifetime weight per day of age and respective ratios calculated. The rams will be shorn, scanned ultrasonically to determine fat thickness and loin eye area, and undergo breed character and structural evaluations.

The rams will have a breeding soundness exam which will include a comprehensive semen evaluation on the fall-born rams.

After all of the objective evaluations, approximately 75 percent of the rams are selected to be offered in Pennsylvania's Performance Tested Ram Sale. This year's Pennsylvania's 23rd Annual Performance Tested Ram Sale is scheduled for Saturday, Aug. 4. The ram sale will be held in conjunction with an invitational ewe sale and the Pennsylvania Sheep Producers Field Day at Penn State's Ag Arena.

A pen of three boars from one sire and from one or two litters are delivered weighing 40-65 pounds. The boars must be born between Jan. 1 and Feb. 9. The pigs are given a 7-14 day adjustment period, then weighed on test.

While on test, the boars are weighed every 14 days until the pen's average weight is 250 pounds. The pen's feed efficiency will be calculated and the boars will be scanned ultrasonically to determine fat thickness and loin eye area. The boars must meet minimum requirements for structural correctness, soundness of movement, and breeding soundness.

Pennsylvania's 26th Performance Tested Boar Sale is slated for Wednesday evening, Aug. 15. This is scheduled to coincide with Penn State's Ag Progress Days.

For more information on Pennsylvania's Performance testing programs or to nominate rams or boars please contact, Glenn Eberly, director, Pennsylvania Department of Agriculture's Meat Animal Evaluation Center, 651 Fox Hollow Road, State College, PA 16803. Phone: (814) 238-2527 or (814) 865-5857 to leave a message or send a fax.

Washington County Hosting Maryland Holstein Convention

HAGERSTOWN, Md. — The Maryland Holstein Convention will be hosted by the Washington County Holstein Association, March 16 and 17, in Hagerstown, Maryland. The day meeting and banquet will be held at the Four Points Sheraton Hotel on Route 40 east of Hagerstown on March 16.

The sale will be March 17, 11 a.m. at the Washington County Agricultural Education Center. The center is located seven miles south of I70 on Route 65, Sharpsburg Pike.

The meeting on Friday will feature Ron Gillespie, vice president of marketing for Cyagra. Cyagra is the livestock cloning subsidiary of Advanced Cell Technology, Inc. of Worcester, MA. Gillespie's interest in and experience with cattle cloning began with the birth of the first cloned calf, Gene, in 1997 at the ABS, Global's stud in Wisconsin. In 1998, he established a business that offered cell processing and storage for animal owners. This led to him joining Cyagra.

Gillespie will provide a layman's introduction to the science of cattle cloning and review how cloning may be used by dairy producers and possibly impact their business.

The ladies program will feature home decorating tips with Karen Tatman, Longaberger Consultant, showing versatile ways of using Longaberger baskets. This will be followed by Caroline King, Massage Therapist, giving a demonstration and background on massage therapy.

A guided tour of the Antietam Battlefield will be available for the juniors. Lunch will be at the Western Maryland Research Farm, followed by a program presented by Jeff Semler, Extension Education, 4-H/AGNR.

The program, titled "Animal Science on the Cutting Edge," shows the science behind the cow. The juniors may experience "hand on" participation, or just watch as they dissect and explore the reproductive tract of a cow.

The annual banquet will be held at 7 p.m. at the Four Points Sheraton, followed by awards and entertainment by Peggy Dawson, a local comedian from Mont Alto, Pa.

Dawson has been performing her comedy act for seven years for organizations such as the Pa. Holstein Association, DHIA, National Association of Retired Federal Employees, AARP, as well as others.

During the day meeting and the banquet, a silent auction will be held to benefit the Dairy Shrine. All funds will be donated to activate, fund and find a new home for the shrine. If you wish to donate an item, please bring it with you to the convention. Any questions about the auction can be answered by Brenda Leggett, (301) 733-2818.

The sale will begin at 11 a.m. on March 17 at the Washington County Agricultural Education Center. Greg Wiles, Sales Chairman reports that 85 plus head are consigned. Special consignments include a clone of Con-Acres HS Zita (EX-94) to be born in August and consigned by Futuraland 2020 Holsteins.

Additional consignments include the probably All-American and All-Canadian Junior 2-year-old Woodbine-DAS Fabulous (VG-89), undefeated at the 2000 shows, first choice Lee due 09-20-01 from Shoreman S Alicia (EX-95) and named Supreme Champion 2000 Royal Winter Fair and a fancy Inspiration Junior Yearling from Tri-Day Ashlyn (EX-94), first 3-year-old Madison 2000.

Sale catalogs are available on request by contacting Chris and Budgee Hill, Sales Managers at 14315 Peddicord Road, Mt. Airy, MD 21771 or phone: (301) 829-9451 or fax (301) 829-2145.

Interesting and educational booths and exhibits will be set up at the Four Points Sheraton as well as the opportunity is available for exhibitors to set up at the sale on Saturday. Space is still available for those wishing to set up a booth for $250 per space. For more information, contact Matt Iager (301) 739-4885 or Matt DeBaugh (301) 432-5739.

Send registration and money to Matt Iager, 1655 Langley Drive, Hagerstown, MD 21740. Checks should be made payable to the Washington County Holstein Association.

Lodging is available at the Four Points Sheraton. Rooms have been reserved for the convention and are guaranteed until Feb. 17; phone: 1-800-325-3535. Other area hotels are Comfort Suites, (301) 791-8100 and Hampton Inn, (301) 739-6100.

USDA Suspends Brazilian Beef Imports Into U.S.

WASHINGTON, D.C. — Following close consultations with Brazilian government officials, the USDA recently announced that it is temporarily suspending the import of processed beef and associated products from Brazil.

This decision is a temporary action pending the release of requested data to complete a bovine spongiform encephalopathy (BSE) risk assessment.

USDA is working with Brazilian agriculture officials to expeditiously complete a risk assessment regarding this matter. Once this data has been received and USDA is assured that Brazil has taken sound measures to prevent BSE, the suspension will be lifted.

There is no evidence of BSE in Brazil. USDA, along with appropriate federal health agencies, will continue to monitor and assess this situation and take any additional actions that may be necessary or appropriate.

USDA's BSE policy has been to be proactive and preventative. USDA has taken stringent measures in surveillance, prevention, education, and response. Import restrictions in countries known to have BSE have been in place since 1989 and active surveillance efforts began in 1990.

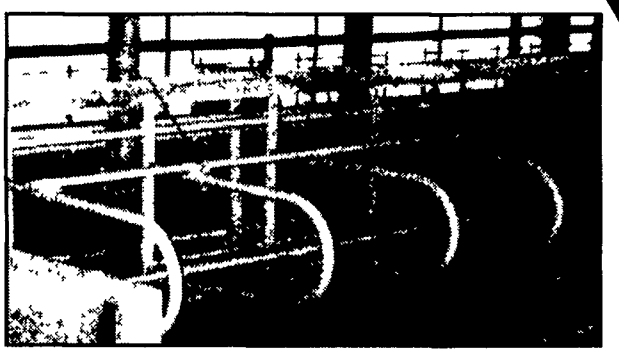
TIRED OF PULLING STUCK COWS FROM YOUR FREESTALLS?
Look at the Hanging Cluster Freestalls



- Suspended from header boards by free swinging chains to avoid cow entanglement
- Free swinging feature virtually eliminates injury to cows and damage to freestalls
- By decreasing cow injury, you can increase milk production
- Fully adjustable in height, neck rail & brisket rail also adjustable
- Available from 1-bed to 5-bed assemblies
- Powder coated with a 20 year rust through guarantee

Market Outlook, Quality Assurance Topics At Pork Expo

(Continued from Page A1)

growth. Meanwhile, consumer confidence is sagging.

"A lot of people lost their jobs and a lot of people are afraid they'll lose their jobs, so they're not going out with their credit cards and buying," Moore said.

But the gross domestic product, or GDP, is at +2.5 percent (last year at this time it stood at +5.2 percent) — which should be relatively good news in a weak economy.

For crop producers, they've endured five years of "very, very, very high yields and a big surplus," said the ag economist. "But it's catching up with us. We have to hope to have a drought next year — but somewhere else."

Pennsylvania growers recovered from a drought in 1999, which sent corn yields back to 70 bushels per acre on average (compared to 127 bushels per acre statewide and 137 bushels per acre nationally in 2000). Soybeans yielded 29 bushels per acre in the 1999 drought, and statewide brought about 42 bushels per acre on average (better than nationally, at 39 bushels per acre).

In 2000, 80 million acres of corn were planted nationally for a yield of 9.9 billion bushels.

With that kind of yield, carryover remains high, at 1.67 billion bushels, wheat at 896 million, and soybeans at 350 million bushels.

In 1980, 32 percent of the meats consumed by the public were pork. In 2000, 23 percent was pork, with poultry taking more of the total meat consumption totals.

In 1960, broiler production was about 5 billion pounds per year. Now it's 40 billion pounds.

In 1980, there were 700,000 hog producers in the country. For USDA records in December 2000, there were only 78,000 producers in the U.S.

"We have 10 percent, or one left out of every 10 producers (we had) 20 years ago," said Moore.

Producers with less than 100 hogs comprised 52.9 percent of the operations in 1999 and only 47.6 percent of operations in 2000, producing only 1 percent of the total number of hogs marketed per year.

But for producers with more than 5,000 hogs, they included only 2.1 percent of all hog producers in the U.S. But they account for 37 percent of the total number of hogs marketed in the U.S.

An interesting figure, noted Moore, was the average head per litter size with operations of 100 head or less. The litter size averaged 7.6. For producers with more than 5,000 hogs, the average litter size was 9.

Is this a management difference? "It must be," Moore said. "It is a significant difference." That number makes larger operations very competitive.

For the December pig crop report, numbers were up 1 percent, meaning the numbers will increase a percentage from last year. Hog prices, like grain crops, have been very volatile, Moore noted.

USDA has been predicting that beef production will be down 5 percent for 2001. But Moore doesn't believe production will slip that much. He expects beef production to be down 3.5 percent, with prices from $72-$77 per hundredweight.

"But if we go to a full- blown recession, it will hit beef the hardest," he said.

Hogs will be about 19.3 billion pounds marketed, up 3 percent from last year, with average prices $40-$43 per hundredweight.

The broiler market will be up 3 percent (it's normally up 5 percent), with 31.17 billion pounds at $55 per hundredweight.

Total meat production to be up .5 percent for 2001, with per-capita consumption of beef at 66 pounds, pork at 53 pounds, broiler at 80 pounds, and turkey at 18 pounds. Each person will eat about 220 pounds of meat in the year. (In 1990, that number was 200.6 pounds per year).

"We added 20 pounds in that time," Moore noted. "We're still basically a meat-eating nation," he said, despite any statistics supplied by vegetarians.

One concern was the proposed purchase of IBP by Tyson, which combined the biggest chicken producer, Tyson, with the biggest beef producer, IBP, possibly creating the second largest hog packer in the country.

Overall farm income continues its suffering, at $43-$44 billion, down from $55 billion in 1995. Moore looks to a re-emerging government role, despite the Freedom To Farm initiatives to back government away from farms that began in 1996. The new Farm Bill could reflect increasing government involvement.

Thirty-nine percent of farm income, or about $23 billion, comes from government payment programs. "The government is not willing to walk away and leave farms on their own," Moore said.

Farmers have to rely more on off-farm work, cheap feed, and government support systems to keep their livelihood.

An alarming statistic is the increase in personal debt and the nonexistent personal savings rate.

"The U.S. savings rate is less than zero," said Moore. "As a nation, we saved nothing. Compared to Japan, at 5 to 7 percent

(Turn to Page A30)

John Henkle, Strasburg, seated, long-time state PPPC president, national director on the board of NPPC, and founding member of PPPC, was honored by the council with a glider-rocker chair from Snyder's Crafts, Intercourse, according to Abe Fisher, Stoltzfus Feed, right. Also on hand to present the award was Herb Schick, PPPC secretary-treasurer, Kutztown, left.

Speakers at the educational portion of the Keystone Pork Expo included Penn State speakers, from left, Robert Meinen, senior extension associate; Robert Mikesell, senior extension associate; and Ken Kephart, swine specialist.

First-place winners at the junior public speaking contest were, from left, Raymond Lent, 11; Kim Bobbett, 15; and Bobbie Sue Vilt, 17.

Second-place Pork Bowl team from the Pigs 'R Us 4-H Club in Potter County. From left, Annette Miles, coach; Kristie Lane; Kimberly Bobbett; Holly Hyde; Josh Risser; Raymond Lent; and Kenny Risser, coach.

Second-place winners of the public speaking contest were, from left, Randy Wilson, 10; Russell Wilson, 14; and Kristie Graham, 17.

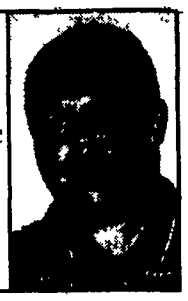
Dairyman To Dairyman

GEORGE CUDOC
PA DHIA
Consulting
Dairyman



Question: What can we do to prevent separation of grain and forage in our TMR? If we do nothing, will our cows perform as they should?

Certain feeding situations make this a very good question. A TMR made up of dry hay and grain is the extreme example of two ingredients that are so different in physical nature that maintaining a homogeneous blend of feed is almost impossible without using some sort of binding agent like molasses, liquid fat, wet by-products like brewers, or even water.

I made a visit to this farm because only experience can determine whether separation of feeds as seen by the dairyman is a legitimate concern. Before arriving, I had requested that a sample of feed be kept as it was discharged from the mixer. I arrived at the tail end of the feeding period with feed left over from the morning feeding.

The amount looked to be adequate and the feeder reported that total leftovers for the day were a bit less than what I saw at the end of the daytime feed period. I advised them that feeding for an 8% refusal was important and that this should be checked periodically with the scales on the wagon so that the eyeball method can be a bit more accurate.

Comparing the mixed feed with the refusal, it was apparent that indeed the cows were sorting. The most accurate way to measure the severity of the separation is to lab analyze both of the samples. Another way to tell if some feed management changes are in order is to look at the performance of the cows since starting this particular diet.

Milk pounds have risen steadily since the TMR ration was fed (54 to 58.5). Butterfat percent has remained identical (3.8%), which tells me that rumen health has not been compromised. Percent protein has gone up slightly but still looks normal for Holsteins (3.2 to 3.3%). MUN has gone down to 10 from 13 and indicates that the balance of carbohydrates to protein has increased.

My recommendation in this case is to monitor the above measurements and if no major change occurs, do not change anything. The cows have told us through DHIA information that although they are sorting and thereby not eating the diet prepared for them; they are able to perform well.

The dairyman asked about the addition of water to help keep the feed together and I said that cheap ideas are often the most underestimated. I also suggested that adding liquid molasses would be the most to my liking but he should work with his nutritionists to look at all his options. If molasses were to be added then the other carbohydrate sources should be adjusted because of what we saw already in MUN.

The real concept here is to not just be satisfied with good rations on paper, but more importantly, make sure that you know what your cows are really eating. Let Pa. DHIA records tell you about your cows and if you cannot hear what they are saying, maybe I can help.

Beef Demand Up For Seventh Consecutive Quarter

SAN ANTONIO, Texas — With seven straight quarters of increased beef demand under its belt, the U.S. beef industry has an aggressive long-range plan to keep demand and profitability growing, said Chuck Schroeder, chief executive officer for the National Cattlemen's Beef Association (NCBA).

'Year-end beef demand for 2000 is about 3.6 percent higher than1999 levels," Schroeder said today from the 2001 Cattle and Beef Industry Convention and Trade Show. "Today, the beef industry is one of the most dynamic segments of the U.S. agricultural economy, and we're just getting started. We've set an aggressive goal to boost demand another 6 percent through 2004."

Planning and Focus

Schroeder explained that the industry's ability to stabilize consumer demand for beef was the result of diligent planning, persistence and focus.

"We began laying the ground work in the mid 1980s by emphasizing improvements in product consistency, tenderness and overall quality; new product development; enhanced relationships with channel marketing partners; multiple beef safety intervention measures; the opening of export markets; and research into beef's nutritional values and benefits," Schroeder explained.

"These efforts began to pay off in 1999, when the beef industry saw consumer demand for beef increase for the first time in nearly two decades."

Increased consumer spending and per capita beef consumption have contributed greatly to the health of the U.S. beef industry. According to Cattle-Fax, a private market research firm, consumer expenditures for beef topped $52 billion in 2000 the first time ever annual spending will exceed $50 billion. Yearly per capita consumption of beef is projected to reach 66.2 pounds, while per capita consumption for pork and chicken totaled roughly 50.5 and 55.8 pounds, respectively.1

These gains are happening at a time when beef supplies are record high, which usually sends prices lower to compensate for market saturation. In the beef industry's case, average retail prices have actually increased (up about 15 cents per pound compared to 1999 prices), signaling a true turn-around in consumer demand.

"We've worked hard to deliver added value to the consumer, and when consumers are consistently seeing that value, price becomes less of a factor in the purchase decision," Schroeder said.

While not discounting the impact of the U.S. economy in recent years, Schroeder believes one of the greatest drivers of change for the industry was the formation of a long-range plan that focused all industry segments on a single goal stabilizing consumer beef demand.

Market Demands

"Historically, it's been difficult for the beef industry to keep up with demands of the marketplace," said Schroeder, who celebrates his five-year anniversary as NCBA CEO this month.

"To turn the tides, we had to leave traditional business practices behind and create a visionary plan that all segments of the industry could get behind one that helped us compete in a new economy ruled by consumer spending power and brand appeal."

In addition to increased communication and cooperation among industry segments, the industry's long-range plan focused on:

- The introduction of convenient beef products that meet the needs of busy consumers
- A science-based effort to increase awareness of essential nutrients in beef — like zinc, iron, protein and many B-vitamins — and the benefits those nutrients provide
- Expanding the export market for U.S. beef products

Three years ago, through the use of checkoff dollars, NCBA helped promote a new category of fully cooked beef roasts, steaks and other entrees that could be heated in the microwave and ready to serve in about 10 minutes. Since then, sales of these types of products have increased 41.4 percent, and annual sales for the new category topped $84 million as of December 2000.2 The beef checkoff also addressed beef's market share in the value-added fresh category, deli category, frozen meal kits containing beef and value-added products for the foodservice channel.

Nutrition Effort

In 1999, the industry launched a major checkoff-funded marketing effort to boost consumer awareness of beef's unique nutrient bundle. It also publicized new research that found lean beef and chicken had similar effects in lowering blood cholesterol levels when included in a heart-healthy diet.

A recent consumer attitudes study of more than 1,300 adults found Americans were more likely to say they feel better about beef's nutritional value today (35 percent) than they did a year ago (25 percent). Fifty-four percent of Americans agree beef is an important part of a balanced diet and healthy lifestyle, compared with 51 percent in 1999.3

Total beef exports through September 2000 were up 12.6 percent in volume and 17.6 percent in value, compared to the same time last year. The beef export market is expected to grow roughly 50 percent over the next five years, from 1,218,000 metric tons in 2000 to 1,817,000 metric tons in 2006. China is expected to join Japan, Mexico, Canada and the Republic of South Korea as a key trade partner once it *joins the World Trade Organization*, which is anticipated to happen by mid-2001.

"There is cooperation across business segments in the beef industry like never before," Schroeder added.

Market Outlook, Quality Assurance Topics At Pork Expo

(Continued from Page A28)

of their income, we're at a minus percentage rate."

But Moore expects that though the economy will slow, there won't be a full-blown recession in 2001.

Third-place Pork Bowl team was from Sugar Valley FFA in Clinton County. From left, Jeff Croak; Josh Weaver; Paul Bohnert, coach; Kristie Graham; and Dan Schrack.

Robert Mikesell, Penn State senior extension associate, provided information about pork quality assurance from the National Pork Producers Council (NPPC). He provided growers with the first part of the Pennsylvania certification program.

So far, about 80 farms are participating in the program.

Rob Meinen, Penn State senior extension associate, provided environmental certification overviews. He told producers that recordkeeping about their practices "is a good insurance policy," he said. For a "buck-ten," he said, producers can buy a notebook and pencil and record what they do in terms of pesticide application, manure application, and other items essential to good farm environmental stewardship.

John Henkle, Strasburg, former state PPPC president, national director on the board of NPPC, and founding member of PPPC, was honored by the council with a glider-rocker chair from Snyder's Crafts, Intercourse, according to Abe Fisher, Stoltzfus Feed. Also on hand to present the award was Herb Schick, PPPC secretary-treasurer, Kutztown.

PPPC began in the early 1960s and Henkle was honored for many years of contributions.

Contests were also conducted at the Keystone Pork Expo.

In the junior prepared public speaking contests, first place winners were:

- Seniors: First place went to Bobbie Sue Vilt, 17, for a speech, "To Check Or Not To Check." Second went to Kristie Graham, 17, with "Pork: Nutritional Value And Origin."
- Intermediates: First place went to Kim Bobbett, 15, for the speech, "Althea, The Genetically Fat Pig." Second went to Russell Wilson, 14, for "Acid Meat Gene."
- Juniors: First place went to Raymond Lent, 11, for "A Pork Recipe." Second went to Randy Wilson, 10, for "Eight Major Breeds Of Swine."

Judges for the prepared speaking event were Chet Hughes, Lancaster County livestock agent, and Katina Showman, Lancaster 4-H coordinator. Lori Little, Lancaster County 4-H and animal science program agent, helped coordinate the event.

Six teams competed in the Keystone Pork Bowl.

Champion Pork Bowl Team was the Tulpehocken FFA, comprised of Brian Hartman, Cathy Levan, Nate Manbeck, John Hartman, and coached by Todd Rabenold.

Second place went to the Pigs 'R Us 4-H team from Potter County, composed of Kristie Lane, Kimberly Bobbett, Holly Hyde, Josh Risser, Raymond Lent, Kenny Risser, and coach Annette Miles.

Third place went to the Sugar Valley FFA from Clinton County. They are Jeff Croak; Josh Weaver; Paul Bohnert, coach; Kristie Graham; and Dan Schrack.

FARM FORUM

Editor:

Despite what some people may say, the large majority of consumers are very concerned about the continuation of our family dairy farms.

Naturally, these concern runs extremely high in towns such as Tunkhannock, Montrose, Wellsboro, Berwick, Carbondale, and Honesdale. In areas such as Scranton, Wilkes-Barre, and Pittston, the concern also is very real.

However, it may be a surprise to some people, but our contacts with several consumers in New York City (especially Brooklyn) clearly indicate that many consumers in the big cities are knowledgeable of the severe problems being experienced by area family dairy farmers.

Many consumers show some of the greatest concerns from New Jersey.

These consumers are very concerned and upset as they witness so many farmers being forced out of the Garden State. (Less than 200 dairy farmers left in New Jersey).

During the last 26 months we now have talked to 110,000 consumers, and only six have disagreed with us concerning the dairy situation.

In addition, Pro Ag cooperated with the Scranton Catholic Diocese in the late fall of 2000 and delivered 12,000 signatures of consumers to Senator Specter's office, Senator Santorum's office, and Congressmen Don Sherwood's office in Scranton.

Since that time, several Protestant churches are now cooperating with Pro Ag and we have obtained about 7,000 more consumers names. All these consumers are strongly urging congress to take immediate action to alleviate the inequities facing dairy farmers.

The consumers ask me various questions, but probably the three most dominant questions are:

1. In a supermarket, why does a gallon of milk with a nonmajor brand name sell for $2.87 per gallon and three-feet away a gallon of Deans Food milk sells for $3.25 per gallon (38 cents a gallon more). The $2.87 is the minimum price set by the Pennsylvania Milk Marketing Board. (Guess who bottles the nonmajor brand milk?)

2. With the crash in the wholesale price of butter, then why is Land O'Lakes butter selling for $2.89 per pound and butter at Aldies selling for $1.69 per pound?

3. Why are the consumers in some stores paying $15 for a five-pound block of American cheese, when you can buy a five-pound block of cheese in Marty's store in Meshoppen for $8.50?

Consumers are really shocked when I tell them that the price farmers received for the milk used for cheese all across the U.S. in November was $8.57 per cwt. (74 cents per gallon). This was the lowest price since 1977.

It's no wonder that consumers are upset and are demanding changes.

I'm going to list some of the comments by consumers.

- Mark Abushady-Queens, N.Y. — People in New York City are becoming well aware of the plight of our dairy farmers. We must keep our family farms in existence, and not allow corporate farms to take over our food supply.
- Jack Coslett, Trucksville, Pa. — It's unbelievable what's happening to our dairy farms. It's nowhere near right.
- Sandra and Denise McCoffey, Brooklyn, N.Y. — Saving our family dairy farms is a worthy cause. Let's not industrialize everything. God bless our family farms.
- Kathy from Wilkes-Barre, Pa. — Many people keep paying higher prices for cigarettes. Why can't dairy farmers get a fair price?
- Robert Becker, Philadelphia — Even in Philadelphia we know that dairy farmers are hurting, and something has to be done.
- Robin Warner, Montrose, Pa. — Where do they think America started?
- Nancy Clark, Lake Winola, Pa. — I love milk, and I want my milk produced locally, I'll pay any price for milk, and I drink three glasses a day.
- Evelyn Van Fleet, Bartonville, Pa. — What's happening to our farmers is incredible. It's terrible. I get very upset about it.
- Kay Veirds, Scranton, Pa. — If, it wasn't for you guys, we would starve to death.
- Ivan Boner, Alaska — I'm just learning about this stuff and it really gets me rowed up.
- Tony Matsavage, Carbondale, Pa. — It's about time something is done about our dairy farmers.
- Jean Schame, Madisonville, Pa. — I'll do anything to help the dairy farmers.
- Kristine Luvalle, Dunmore, Pa. — I want to see the farmers get a fair shake.
- Christine Sauers, Wilkes-Barre, Pa. — I don't think they realize how much they need you guys.

Finally, 6-year-old Sara Mattina said, "Daddy, how can we help save our family farms?"

These are just some of the comments made by consumers. I hope our senators and congress people are listening!

Pa. Leads Nation In Farmland Preservation

HARRISBURG (Dauphin Co.) — Gov. Tom Ridge announced Pennsylvania is the nation's undisputed leader in farmland preservation by now having more acres preserved for agriculture than any other state.

The year 2000 ended a record-breaking year in farmland preservation for the Ridge Administration. Pennsylvania preserved 283 farms totaling 33,273 acres, the most farms ever preserved in one year.

Pennsylvania continues to preserve farmland at a pace faster than any other state in the nation, and the state is recognized for having the highest number of farms preserved nationally. In December, Pennsylvania reached the goal of preserving over 180,000 acres, the most acres preserved nationally.

"The commitment of the Ridge Administration helped Pennsylvania reach a milestone in farmland preservation. The 2000 Farm Show set the tone with the 100 Farms in 100 Days initiative, followed by a summer campaign, and then a fall campaign of 100 Farms in 100 Days, Again, leading to the most farms preserved in one year. In December, Pennsylvania reached the goal of becoming the national leader in Farmland Preservation with the most total acres preserved. We are in sole possession of first place in America's farmland preservation league," said Agriculture Secretary Sam Hayes.

At the 2000 Pennsylvania Farm Show, Gov. Ridge announced his goal of preserving 100 Farms in 100 Days as part of his "Growing Greener" program. Gov. Ridge's goal was reached when more than 100 farms were preserved by Earth Day, April 22, 2000. The summer campaign preserved 47 farms. And then, in the fall, Hayes called for a vigorous effort to the end of the year when a total of 135 farms were preserved during the "100 Farms...Again" campaign.

American Farmland Trust, a national farmland conservation group, has recognized Pennsylvania as the national leader in farmland preservation. Pennsylvania is the recipient of the national achievement award for farmland preservation, recognizing the commonwealth for preserving the most farms and farmland acres in the nation.

Created in 1989, the Pennsylvania Agricultural Land Preservation Board oversees the state Farmland Preservation Program, which allows the state and counties to purchase development rights, referred to as easements. These easements guarantee that farms will remain as agricultural land.

The Farmland Preservation Program continues to work toward preserving and protecting Pennsylvania's agricultural land for farm families and future generations of Pennsylvanians.

For more information on the Farmland Preservation Program, contact the Bureau of Farmland Preservation at (717) 783-3167.

Crop Workshops StriveFor Improved Production, Profits

COLUMBUS, Ohio — February is a good month for Ohio farmers wanting more in-depth, hands-on information about current agronomic crop production practices and economics.

The Ohio State University Extension Agronomic Crops Team is conducting workshops across the state during February.

"We will talk about the complete life cycle of the plant and some management practices that can improve production and profitability," said Greg La Barge, agriculture and natural resources agent at the Fulton County office of Ohio State University Extension and coordinator of the Agronomic Crops Team.

The workshops focus on specific aspects of Ohio's agronomic industry. The workshop topics are soybean production and technology, corn production and management, weed management and identification, intensive wheat management, and soil fertility.

"We have a full complement of opportunities for growers this year," La Barge said.

All workshops require preregistration. The fee for each workshop varies from $15 to $35 and is included in the registration material.

For complete agenda details and registration information, those interested should contact the host Ohio State University Extension agent at the below telephone number for the workshop they wish to attend.

Corn Production, Management Workshops

- Tuesday, Feb. 13, Kalida, Putnam County. Host agent: Glen Arnold, (419) 523-6294.
- Wednesday, Feb. 14, Wilmington, Clinton County. Host agent: Tony Nye, (937) 382-0901.
- Thursday, Feb. 15, Dresden, Muskingum County. Host agent: Mark Mechling, (740) 454-0144.

Weed Management, Identification Workshops

- Tuesday, Feb. 20, Van Wert, Van Wert County. Host agent: Andy Kleinschmidt, (419) 238-1214.
- Wednesday, Feb. 21, Zanesfield, Logan County. Host agent: Tammy Dobbels, (937) 599-4227.
- Thursday, Feb. 22, Lancaster, Fairfield County. Host contact: Stan Smith, (740) 653-5419.

Intensive Wheat Management Workshops

- Monday, February 19, Bucyrus, Crawford County. Host agent: Steve Prochaska, (419) 562-8731.
- Tuesday, Feb. 20, Sidney, Shelby County. Host agent: Roger Bender, (937) 498-7239.
- Thursday, Feb. 22, Bryan, Williams County. Host agent: Florian Chirra, (419) 636-5608.

Soil Fertility Workshops

- Wednesday, Feb. 21, Waldo, Marion County. Host agent: Bill Hudson, (740) 387-2260.
- Thursday, Feb. 22, Greenville, Darke County. Host agent: Dennis Baker, (937) 548-5215.

USDA Announces New Launch Date For Mandatory Reporting Program

WASHINGTON, D.C. — The USDA recently announced a new date for implementation of the livestock mandatory reporting program.

The effective date has been changed from Jan. 30 until April 2.

USDA's Agricultural Marketing Service made the decision to change the effective date to allow more time for testing the program's new electronic information collection system.

Once implemented, the program will require producers and other market participants to report information about the marketing of live cattle, swine, and lambs, and products of those livestock.

This new effective date will ensure the confidentiality of those required to report the information while providing market participants with readily understood, accurate information on pricing, contracting for purchase, supply and demand conditions for livestock, livestock production, and livestock products.

For more information, contact John Van Dyke, Chief, Livestock and Grain Market News, AMS Livestock and Seed Program, USDA Stop 2619, 1400 Independence Ave. SW, Washington, D.C. 20090-2619, (202) 720-6231; fax (202) 690-3732; or e-mail john.vandyke@usda.gov.

Farm Bureau Endorses Two For Penn State University Trustee Board

CAMP HILL (Cumberland Co.) — Two farmers were endorsed for election to the Pennsylvania State University (PSU) Board of Trustees by the Pennsylvania Farm Bureau (PFB) Board of Directors, according to an announcement today by Guy F. Donaldson, Farm Bureau president.

The state's largest general farm organization is supporting Keith W. Eckel of Clarks Summit, Lackawanna County, a vegetable and grain farmer, and Dennis C. Wolff of Millville, Columbia County, a dairyman.

"It is extremely important that we in production agriculture are represented on the board of our only land grant university in Pennsylvania," Donaldson said, "because agriculture is the state's number one industry. This industry should have representatives on the Pennsylvania State University board."

"Both Eckel and Wolff own and operate successful farming operations. Both have been honored as Pennsylvania Master Farmers," Donaldson stated. "They understand the need and importance of basic research and its importance to agriculture. They also understand the vital role that higher education plays in the agriculture industry," he added.

"Both farmers have proven records as successful farmers and statewide leaders," according to the state farm leader. "Our board evaluated all of the announced candidates, and decided these two men, both full-time farmers, would best serve agriculture."

Keith W. Eckel is the former president of the Pennsylvania Farm Bureau and a former board member of the American Farm Bureau Federation. He is a graduate of Dickinson College with a B. A. degree in Political Science. He and his brother, Douglas, own and operate a 1,400-acre farm, which produces fresh tomatoes, pumpkins and field crops.

Eckel presently is a member of the Nationwide Insurance Board of Directors. He has received many honors including the Farm Bureau Distinguished Service Award, Master Farmer, Newsmaker of the Year by the Scranton Times, Outstanding Young Farmer by the Pennsylvania Jaycees and Honorary County Agent Award from the Pennsylvania Association of County Agricultural Agents. Eckel serves and has held positions in numerous national, state and international organizations.

Dennis C. Wolff is the owner of Penn-Col Farms, a 700-acre dairy farm supporting a 500-head dairy herd. Wolff specializes in the purebred Holstein genetics business. He is involved in a joint venture with the American Breeders Services, Inc., which samples and markets Holstein genetics internationally. He also operates a joint venture with Grosvenor Farms of the United Kingdom in the development of cattle to be marketed internationally.

He is a member of the U.S. Department of Agriculture Farm Service Agency State Committee and the Agriculture Technical Committee of the World Trade Organization. The dairyman presently is a member of the Millville Mutual Insurance Company Board and is president of the Nicholas Wolff Foundation, Inc. Camp Victory, a non-profit summer camp for disabled and chronically ill children.

Wolff is active in trade and community activities.

The election of two trustees to represent agriculture on the Penn State Board of Trustees will take place May 10. Agricultural delegates from around the state will gather at University Park to elect two trustees to three-year terms.

NRCS To Provide Additional Funds For Farmland Protection

HARRISBURG (Dauphin Co.) — The Natural Resources Conservation Service (NRCS) has announced the availability of $30 million nationally to purchase conservation easements and protect valuable farmland through the Farmland Protection Program (FPP).

FPP supports state and local efforts to protect agricultural land from being developed through the purchase of long-term or permanent conservation easements.

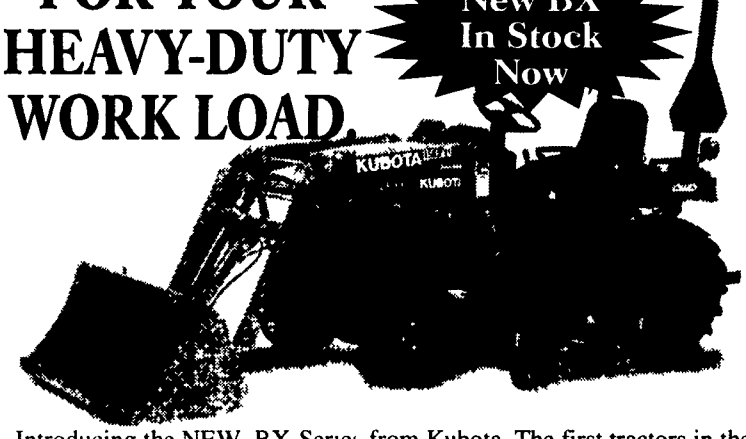
In past years, the program was open only to state and local governments and tribes. This year, private nonprofit organizations can also apply.

Since 1996, funding from FPP has helped preserve 11,278 acres of Pennsylvania farmland. The Pennsylvania partnership of the state and county preservation programs, with assistance, leads the nation in protecting more than 183,000 acres of privately-owned farmland.

"The Farmland Preservation Program not only preserves valuable farmland and maintains its use as agriculture, it also protects the resources and the environment. Every farm protected by a federal, state, or county preservation program must be involved in a conservation plan, which is designed to improve and conserve all aspects of its natural resources," said Janet Oertly, NRCS state conservationist. NRCS conservation professionals provide technical and planning assistance to help farmers take care of the land and make their farm more economically viable. "We are proud to be a partner with Governor Ridge and Secretary of Agriculture Hayes in their efforts to protect the agricultural farmland that has made Pennsylvania what it is today."

FFA Discover the Power

THE NEW HEAVY-DUTY SUB COMPACT TRACTORS BUILT FOR YOUR HEAVY-DUTY WORK LOAD.



Introducing the NEW BX-Series from Kubota. The first tractors in their class to combine the performance and versatility of a compact utility tractor with the agility and feel of a garden tractor with Kubota's legendary durability and reliability. Both the BX1800 and the BX2200 feature Kubota's powerful 3 cylinder liquid-cooled diesel engine and heavy-duty frame for years of productive use And performance? The BX-Series is packed full of features you'd expect to find on larger, commercial-quality compact tractors. From light yard work to heavier loader work, the BX-Series is the sub compact tractor for you.

FEATURES

* 4 WD
* Power Steering
* Hyst. Drive - 2 Speed
* Loader - Mower Compatability
* Diff. Lock
* Std. Cat. "1" 3 pt. Hitch
* Std. 540 PTO
* 18 or 22 HP 3 cyl. Diesel
* Priced in Line With Larger 2WD Diesel Garden Tractors

Milker Training March 13

MANHEIM (Lancaster Co.) — Dairy employees responsible for milking cows should plan to attend a milker's training session planned Tuesday, March 13 at Hershey Brothers near Manheim.

Through demonstrations, discussion sessions and videotapes, participants will receive instruction on proper milking procedures, mastitis detection, producing high quality milk, and sampling cows for milk culturing.

Milking employees can improve their ability to milk cows with a consistent routine using recommended milking practices. The sessions will highlight mastitis detection and prevention. The program runs from 9:30 a.m. to 3 p.m.

The morning program begins with the anatomy of the udder and several small-group workshops. These will include a milking parlor session to teach proper milking procedures, a videotape on one-step milking prep, and a session called "producing high quality milk."

Following lunch, veterinarians will provide instruction on important cow side observations to make in the parlor and follow-up required with problem cows. This will include procedures such as dealing with injured teats, bandaging a teat, identifying "normal" teat ends, and giving intramammary infusions. Participants will also learn proper techniques for taking milk samples and culturing cows.

Instructors include Dr. Jerry Jones, Virginia Tech; Galen Kopp, Lebanon County extension; Glenn Shirk, Lancaster County extension; Dr. Arlen Mills, multi-county agent, veterinary science; and Dr. Christopher Barton, Lancaster Veterinary Associates.

Registration fee is $35/ participant with lunch fees included. The program is limited to 25 participants, so that a workshop atmosphere can be maintained during the many small-group activities planned.

Directions to the farm from the Pennsylvania Turnpike, travel south on Rt. 72 about 0.5 miles and turn left (east) onto Mountain Road. Proceed about three curvy miles and turn right (south) onto Locust Grove Road. Go another half mile and turn right (west) at the first intersection onto South View Road and to Hershey Brothers Farm.

To register for the sessions, contact the customer service desk at the York extension office at 112 Pleasant Acres Road, York, PA 17402-9041, (717) 840-7408, fax (717) 755-5968, or e-mail Tim Beck at tbeck@psu.edu. Please register early to reserve your spot in the workshop.

16th Annual N.Y. Farm Show Feb. 22-24

SYRACUSE, N.Y. — It's show time!

The 16th Annual New York Farm Show, Feb. 22-24, at the New York State Fairgrounds has grown to be more than five times its original size.

This show is packed with new and practical equipment, services, and products just right for your farming operation.

More than 400 exhibitors covering more than 215,000 square feet will be waiting for you.

Farmers can shop, compare, and buy the latest ag technology and ask the experts about the latest practices and efficiencies.

The experienced folks can reflect on the past and enjoy the old iron of the antique tractors as well as the antique milk bottle collection.

The young people can enjoy the toy show located in the Center of Progress Building. The toy auction Feb. 23 at 6 p.m. in the Empire Room of the Arts and Home Building will auction more than 200 farm toys to the highest bidder. All proceeds benefit New York FFA.

The New York Center for Agriculture and Health offers health screenings Feb. 23 and 24 at 10 a.m.-2 p.m. and a Farm Kid Safety Workshop Feb. 22, starting at 9:30 a.m., 11 a.m., and 1:30 p.m.

New York Farm Show is sponsored by the Northeast Equipment Dealers Association and American Agriculturist Magazine. Tickets are available free from Northeast Equipment Dealers or by writing New York Farm Show, P.O. Box 3470, Syracuse, NY 13220. Include a self-addressed stamped legal envelope with your request.

Recognizing A Brand Of Leadership

WOOSTER, Ohio — Farm Journal's Beef Today, has named Louis M. "Mick" Colvin as the 2001 Ladd Hitch Award Winner. The award was announced today at the National Cattlemen's Beef Association's conference being held in San Antonio, Texas.

Colvin, the former executive director for Certified Angus Beef, LLC, was recognized for building the leading brand of fresh beef and the resulting positive impact it has made on the beef industry as a whole.

He started the brand in 1978, focusing on premium quality when the industry was gearing towards quantity. Retired in Oct. 1999, Colvin is currently a special adviser to the company. Sales of the Certified Angus Beef™ (CAB) brand topped 493 million pounds in 1999. (More than 555 million pounds were sold in 2000.) As the brand's only executive director during the first 21 years, he receives much of the credit for its success.

Colvin is quick to share the brand's success with the company's staff and approximately 8,900 licensed partners. It was Colvin, however, that took the idea of offering consumers a premium brand of beef and made it a reality, said co-founder Fred Johnson.

The Ladd Hitch Award was created in 1997 to recognize innovation, leadership and the pursuit of excellence in the tradition of Ladd Hitch, a pioneer of Great Plains commercial cattle-feeding industry. It was first awarded in 1998. Previous winners were Warren Weibert of Kansas, Mark Armentrout of Georgia and James Herring of Texas.

Speciality Markets For Goat And Sheep Dairies

Kind Of Operation

As a producer, one needs to decide what kind of operation is necessary to sustain the market developed. In most cases, what comes first the chicken or the egg? Do you build the market on limited or surplus product availability?

Kind Of Product

In a speciality market, the product should be something you would buy as a consumer. If you can sell it to yourself, you will know how to sell it to the buyer. If possible, provide recipes on how to use the product and include serving sizes.

Marketing Ideas

Goat and sheep milk has different qualities associated with the composition. There are several options to consider and could be species dependent. All avenues need thorough research before deciding the best approach to your milk supply.

• Commercial Processors buy the raw product from the producer. This will depend on the processor's market demand. If the processor's demand has decrease, they may not need as much milk from the producer. In this scenario, the producer becomes a price taker.

• Producer-Farm Processor is the situation where a producer processes the product at farm. The producer can set own price for end product, but needs a market. Markets may include wholesale distributors, farmers market, on farm sales and grocery store chains.

• Producer Off-Farm Processor is where a producer takes raw product to a contracted processor. The processor makes end product and may market some of the product, but the producer may be the marketer.

Product Development

It is important to understand your state's dairy regulations before a final decision is made on the kinds of product available.

• Milk-Skim, one percent, two percent, whole, chocolate, strawberry, vanilla, Pet, etc.

• Value-Added Dairy Products — cheese (soft and hard), candy (fudge, carmel, etc.), dessert (cheesecakes), yogurt, ice cream, soap, lotions, etc.

• Value-Added Meat — Prime cuts, sausage, hides (leather and wool), etc.

• Combine the dairy and meat categories and make gift boxes.

• Value-Added Land — Goats and sheep are grazers. Equipment needed would be temporary fencing, animals, water supply, trailer for hauling and possibly some guard dogs. Call real estate groups that would like the land improved without mechanical intervention.

Product advertisement can be accomplished through local papers, word of mouth, internet and extension service.

Financial Help

There is financial help available. The most important item before seeking out a financial source is a solid business plan. When applying for grants, make sure to start well in advance of the deadline and contact an agricultural based university for help in grant and loan planning.

— Dr. Irene Brown-Crowder
Agway — Northeast Enterprise
Syracuse, NY

Still Selling At The Stockyards

Part 3 of 3

MICHELLE RANCK
Lancaster Farming Staff

Editor's Note: Although much of the once-busy Lancaster Stockyards now stands quiet, cattle are still bought and sold by private treaty. This third article of a series highlights Charles Diller and associates and their operation.

LANCASTER (Lancaster Co.) — Amongst the quiet alleys and weathered wooden fences of Lancaster Stockyards, business still carries on.

A sense of history pervades every day at the office for Charles Diller and his associates as they continue to buy and sell livestock at what was once a premier stockyard in the East.

Diller, trading under "Louis Lyons and Son," along with Zane Kauffman, George Batdorf, and Denny Michael, continue to move cattle the way cattle were bought and sold before the advent of the auction — private treaty.

Learning The Business

The sunlit office, recently renovated, stands in marked contrast to the deserted offices which are scattered along the maze of alleyways.

Once centers of commerce for the trading accomplished at the stockyards, the 14 offices are small, usually 10 feet by 30 feet. Some reach two stories high.

Diller's father introduced him to the business. Elias Diller was a bookkeeper for Louis Lyons, who was at one time partners with "Doc" Fox. According to Diller, Fox "was a dapper kind of fellow with a particular gait and a light cane that he banged on the ground with each step."

Although cattle were sent in to the stockyards, dealers also traveled the Lancaster countryside to buy fat steers.

Later Lyons broke away from "Doc" Fox to begin his own business.

"My dad drove an old Model T Ford and he would drive "Old Louie' around the country and buy fat cattle," said Diller. That friendship led into employment for Diller's father, who eventually took over the business. Elias Diller did, however, concede to Lyons' request to continue his name with the business, so today Diller trades under the "Louis Lyons and Son."

"When I was born (1920) my father was making $10 a week, and probably $20 a week when I was in high school," he said.

Elias continued in the business until he was 85 years old when he passed away and Charles took the reins. "I felt the business should continue. I had enough experience to keep things going," said Diller.

A self-described "city-boy" born, raised, and living in Lancaster city, Diller learned the livestock business during his summer vacations as a child, when he would come to the stockyards with his father. "I got to know a lot of people and a lot about the stockyards because of the time spent there, weighing feeder cattle and fat steers."

Diller had a job for more than 12 years in the assembly division of Hamilton watch company, "far removed from anything like this (the livestock business). When I got out of high school, I had a hard time getting a job, they were hard to get," he said.

After his time at the watch company, Diller worked in a jewelry store for three years, then repaired watches in his home until he began work at the auction in 1964.

"They needed a clerk. I understood the pricing of animals, so Dad asked me if I would want to do that, so I came out Wednesday afternoon. One day I bought three steers and gradually started buying more animals at the sale."

Diller continued to become more involved in the stockyards and take on more responsibility until he took over in 1982.

Today's Sale

Today Diller is joined by several others who help with the business. Zane Kauffman and George Batdorf, both of Lancaster, along with Denny Michael, Conestoga, volunteer their time to help at the auction.

"We have no payroll. Where else can you find that arrangement?" asked Diller.

Kauffman has been in the livestock business since 1946. Kauffman was first an employee, then a partner in the William W. McCoy firm which closed in 1989, when Kauffman became and employee for Walter M. Dunlap and Sons.

When that firm closed in 1988, Kauffman began work for Louis Lyons and Sons. He continues to stay in the business by helping Diller with the weekly buying and selling of livestock.

Outdoor, physical work continues to be one of Diller's favorite aspects of the business. "He's a very active person," said Kauffman.

"Zane and I deliver hay, treat the animals, grind the corn, weigh the cattle, do the book work, sell the animals, and buy new animals to come in," said Diller.

Besides cattle, the office also moves sheep and goats each week for local and out-of-state ethnic markets. Diller estimates they move less than 50 cattle, approximately 200 sheep, and 200 goats a week.

Historical Perspective

"Farmers would come in and walk the numerous alleys. If they made some purchases, they would come into the individual office that had control of that area," Diller said. "There were numerous scales located throughout the property. When farmers bought cattle, they were taken to a scale, whichever one was convenient." There were at least a dozen different scales on the premises, according to Diller.

"There had to be an employee of the stockyards company, a certified weighmaster for each scale," said Kauffman.

Diller recalls when horse-drawn wagons hauled the hay, feed, and manure to and from the pens. In 1936, said Diller, the stockyard company bought three new trucks, which consequently helped to change the way the stockyards did business.

"The market didn't fluctuate in those days like today, with the influence on price structure by the futures markets," said Diller.

The porch of the old wooden stockyard company office building held a large board that showed the receipts from a variety of Midwestern markets. This information in turn helped to set the market for the Lancaster market.

According to Kauffman, the second floor of the building housed offices for a veterinarian and the railroad. New numbers were posted with chalk and changed every Monday and Wednesday.

"We received a lot of information from teletype and telegraph from the office in downtown Lancaster," said Diller.

Central to Community

Two main factors — good facilities and a good location — help Diller continue to do business at the stockyards."I call it central to the farming community," he said.

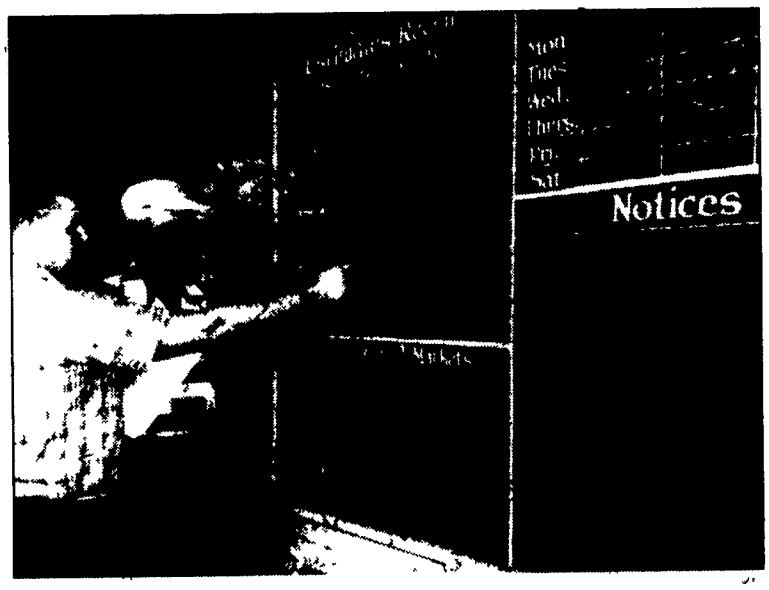
"The other reason is we can be helpful to farmer, and provide a good service for farmers. We sell fat cattle and feeders same as always, by private treaty."

Diller and his associates contact farms to solicit business or fill orders for producers. Contact people also help direct cattle to the Lancaster facility.

Planning to stay in the business "as long as we can hit the break-even point," Diller's love of the business is clearly evident.

"I feel I can help farmers. I enjoy it. If I didn't enjoy it, I wouldn't be here two days. I feel like I can offer something to the farming community. I can help."

Today, the board is still intact. During business operation, the board stood on the porch of the old wooden stockyard company office building. From left is Denny Michael, Conestoga, and George Batdorf, Lancaster, Zane Kauffman and Charles Diller.



This board showed the receipts from a variety of large Midwestern markets. Estimated figures for the number of cattle available in the Midwest determined the fat market price of cattle at the Lancaster stockyard.

Zane Kauffman, left, and Charles Diller continue to conduct business from the office in the Lancaster Stockyards.

In the 1940's these cattle, which are custom-fed by Charles Diller and his associates, would have been joined by several thousand other cattle to be sold, probably from the Midwest.

Regulatory Agencies, Noted Growers, Beginning To Focus On 'Agri-tainment'

(continued from Page A1)

miles from downtown Manhattan.

The Wightmans began ag entertainment, which some growers call "agri-tainment," in 1991. Wightman said that pick your own (PYO) apples are "entertainment" for most. The Wightmans are moving to a totally trellised orchard system.

On the PYO, members have an actual sign-up fee of $10 per year. The stand provides $8 worth of coupons to members who sign up. Last year, average volume of fruit per sale was 27 pounds at 79 cents per pound.

For customers, Wightman noted, the quality time they spend with their families at the farm "is almost secondary," he said, to the produce sold.

A critical issue for growers in the coming years will be farm safety and liability. Insurance is critical.

Wightman noted that, from Monday to Friday, the farm is host to school bus tours at a rate of 500 children per hour.

They also conduct public hayrides Saturday and Sunday during pumpkin season. The farm also hosts an educational barn where displays of cider making, pollination, variety identification, and other items are on display.

He said many students who visit the farm have never seen an orchard, some not even a tree. One inner-city child, Wightman noted, took one look at the pumpkins in the field and said "look at all those orange basketballs!"

Though agri-tainment is not a silver bullet for farmers, it can go a long way toward sustainability and has it's share of problems. One of those is traffic control. The Wightmans' blacktop parking area can hold 2,000 cars and "we fill it on the weekends," he said.

For Eric Johnson of Bedford, N.J., whose family has been farming since 1953, 250 acres accommodates what he calls "agri-tainment."

"We started 'agri-tainment' in the early 1980s as a marketing method for pumpkins," Johnson said. "It is *the* product."

The farm market begins with Easter egg hunts, providing a greenhouse for tours, strawberry picking, all the way to apples (planted about six years ago).

"It's what customers want," Johnson said. "They want to spend a day on the farm."

Challenges of agri-tainment also include liability issues. The busiest day for school tours hosts about 1,500-2,000 kids, he said.

The biggest day in October for the public entertains about 4,000-5,000 people at the farm market.

The logistics are many, Johnson said. How do you handle that many people? How do you park the cars? How to deal with the issues of "people business," such as bathrooms and safety?

As the farm markets grow in number and increase their customer base, regulatory agencies are looking closely at "safety and cleanliness," said Johnson. "In the near future, these will be looked at a little bit harder."

A simple thing like a "barn" will be noted as an "assembly area" and could invoke complex regulations for meeting-place structures. The business has relied heavily on tents and other flexible structures.

Agri-tainment, noted Johnson, comprises about 20 percent of the total income of the market. And growers should charge for the petting zoo, feed, hay rides, and contests at the market. "We sell agri-tainment as a product," Johnson said.

Also, having enough commodities present, including apples, is a challenge for 5,000 people a day, he said.

Reed Soergel, of Soergel Orchards located north of Pittsburgh, indicated they have operated their "sustainable farm" since 1850. They offer organically grown products and glass-bottled milk.

Something simple as 500-600 feet of train track in the market draws people to the market.

Other than simple weekends, Soergel is trying to attract buyers to the market year-round.

At the "agri-tainment" panel were farm market owners and managers, with Ken Wightman at the podium. From left, Reed Soergel, Eric Johnson, Wightman, and Jay Milburn. ***Photo by Andy Andrews***

A concern that many growers should have are keeping track of animals in petting zoos. He noted the case of one farm market north of Philadelphia cited for problems with e.coli. It's important to provide handwashing facilities and to post public notices about cleanliness after handling animals.

But for making money, it's hard to beat the "blue feeders" installed. A bag of feed to fill the vending machines costs about $14, but "you're getting $200 out of the bag," Soergel said.

The farm features all sorts of farm market "agri-tainment" events. That includes a pig "happy birthday" sing-along, sheep shearing, a "Tiny Town" for tottlers, balloon chase, kettle corn, pony rides, corn maze, mining area, and even PYO sunflowers.

Soergel said his daughter made $600 off cut sunflowers. "They wilt pretty quick, but people buy them," he said.

The market includes areas for customers to wash pumpkins.

Farm market managers should purchase wagons. Using wagons "will make you money," he said, because they allow people to pick up more than one pumpkin from the field.

Jay Milburn, farm market manager of Milburn Orchards on 300 acres in Maryland, noted the family has been in the business since 1902.

Apples are the main crop, peaches second, and cherries third.

The market puts pumpkins into the yard. "We grow them remotely," he said.

The orchard has conducted a craft show since 1989. The shows are conducted in early September and another in early October. They are the biggest weekends, he said. "We had to deal with a lot of people."

Making sure of customer safety is critical. "I can't emphasize safety enough," he said.

Milburn showed a series of slides indicating how crucial safety can be. Since the time they were taken, traffic has been redirected with more emphasis on signage to help travelers and traffic safety.

The key is to allow people to come to the farm and "enjoy the farm, and have those magical moments between themselves," he said.

The farm also has a petting zoo, which they have named "Barnyard Buddies." They have sinks and hand-washing stations with signs posted.

And those feed machines are great.

"Feed machines — these things pay for themselves one day of the weekend, easily," Milburn said.

Milburn also provides a pony ride through the apple tree trail — a really popular event. They also have six acres of corn in the corn maze.

In one event, the farm charges customers $1 for three shots of the "super sling." If players hit the target, they win a pumpkin. "We have real macho guys doing this one," he said.

They recently replanned the farm lots and now can park 1,300 cars. "We fill it up," Milburn said.

"You have to enjoy doing this," Milburn said. "If you don't enjoy it, why do it?"

Seminar Speakers Tell What To Expect In 2001

MICHELLE RANCK
Lancaster Farming Staff

NORTH CORNWALL (Lebanon Co.) — Producers got a jump on 2001 as they were introduced to an agriculture forecast, an outlook on the dairy industry and new products and services session during a recent luncheon.

The Agriculture Group of Fulton and Lebanon Valley Farmers Bank recently hosted their 22nd annual seminar, attended by more than 450 people, at the Lebanon Valley Expo Center.

2001 Milk Market

Ken Bailey, Penn State, presented "The Outlook for 2001: It Depends!" as he outlined his predictions for the future of milk prices.

"The good news is that markets are strengthening, and it looks better," he said.

Las year was a strange year, said Bailey, because of a complicated pricing system put in place in the beginning of the year with the new federal order reform. Also milk production remained strong year-round, aided in part by a cool summer. The butter demand is firm and cheese stocks are building, reported Bailey.

Cow numbers, explained Bailey, drive milk supply, and these numbers are beginning to decline. American cheese production was up in 2000 but also beginning to slow, he said. At the end of the year, he noted, cheese stocks were up 11 percent.

In addition, butter prices were boosted in December and levels were low as America entered the new year, another good sign of better prices.

Issues that could affect milk prices in 2001, said Bailey, include the new pricing formulas for Class III and IV. The actions of the new administration may also have a bearing on bottom-line prices. An extension or expansion of the Compact, environmental lawsuits and regulations in California, the U.S. economy's health, and upcoming summer weather will also help to swing prices.

Bailey predicted a slight growth in production per cow. Fuel and feed prices will also determine expansion in America in the next year.

The California electricity situation, tight butter stocks, and milk supply will also drive the market.

Front burner issues for the USDA will be the Class III and IV formulas and making decisions on butter/powder support. Congress' issues will be deciding the fate of contracts, examining concentration (such as in the retail markets), and hearings for the 2002 Farm Bill and the free market approach.

Bailey sees a 40-cent gain in milk price gained in 2001, a number he considers a conservative estimate.

Reproductive Health

Dr. Billy I. Smith, DVM MS, assistant professor of clinical studies at New Bolton Center, University of Pennsylvania, presented "Livestock Herd Health."

Smith opened his session by teaching about reproductive health.

"As the herd gets larger, it becomes more difficult to individualize each animal," he said. Heat detection, said Smith, is a main problem in maintaining or increasing pregnancy rate within a herd.

"The conception rate is difficult to change, but heat detection helps to change the pregnancy rate."

Heat stress may also be a problem in helping cows reproduce. According to Smith, "the pregnancy rate drops drastically through the summer." The average pregnancy rate in the U.S., cited Smith, is 13 percent.

Smith also pointed out that a dairy cow which is a good producer, pouring her energy and reserves into milk production, may have to leave the farm as a culled animal because she is harder to get bred.

Today's dairy cow may also have a higher calving interval than in the past, he said. "If you put a dollar figure on every day beyond 115 days, a 130-cow operation is losing $11,500 a year for every day a cow is open at the rate of $2 a day," said Smith.

The length of today's cow's cycle has grown, believes Smith, who said that a normal Holstein cow's cycle is 22 days.

Smith also addressed the duration of a cow's estrus. "In reality, the time is actually in heat is such a small percentage of the whole 21-day cycle, it's amazing that we ever catch them in heat."

Holsteins are in heat for only 7 hours, with 30 percent of the cows in heat for less than four hours. Heifers are in heat for 12 houra, a larger window of time.

Today's cows have twins 10 percent of the time, are anovulatory for 20 percent of the time, and develop cystic ovaries 11 percent of the time.

Ovsynch

Smith also addressed the ovsynch, "ova-synch" or "timed AI" program that removes heat detection from the equation as cows are simply bred according to a hormone-induced timetable. In an informal survey of the audience, Smith found that half of the audience used ovsynch, and half of those who used the program said they were happy with it.

"If you are unhappy with it, revisit and refocus on it. If your neighbor is getting a 25-30 percent pregnancy rate, there's no reason you shouldn't be experiencing the increased pregnancy rates that your neighbor is."

The first shot, 2 cc's of GnRH, is followed seven days later by 5 cc's of prostaglandin. Two days later the cow receives another GnRH shot and then, 16 hours later, the timed AI.

"Make sure the animal gets the full amount at the right time. You have to be diligent and specific about when you gives these shots to be successful," he said.

The prostaglandin shots of the presynch program, given at the end of the voluntary waiting period, will bring a cow into days 5-12 of her cycle, increasing first service success.

If the program is started too late, the follicle will be too small to ovulate, the cows were induce CI regression, and the insemination will occur too early for the egg. Starting too early will include the first follicle to grow but it will not be followed by the recruitment of another follicle and the cow will remain open.

Usually the GnRH program yields a 36 percent pregnancy rate.

(Turn to Page A42)

Ken Bailey, Penn State, presented "The Outlook for 2001: It Depends!" as he made his predictions for the dairy industry for the coming year.

Fiberglass Wheels & Springs - Upholstery Fabric
Powder Coated and Zinc Plated Carriage Parts
700 Country Lane, Paradise, PA 17562 Hms. Service (717) 627-7120
★ ★ New Products Now Available ★ ★
~ • The Advantages of the Fiberglass Wheels are: ~
Fiberglass Wheels
• **Very Low Maintenance Costs** These wheels are built to last a lifetime and beyond without ever having to replace any parts on the wheels under normal use The only maintenance required will be tightening up or replacing the tire or rubber.
• **High Performance Regardless of the Elements** Wheels stay tight even in hot, dry conditions – No more loose rattling spokes – ever!
• **Rugged Heavy Duty Design** It takes a major accident or impact to break or twist these wheels
• **Hard Durable Surface** Resists scuffs and scratches, paint job stays shinier.
• **Easier Cleaning** Spokes have all rounded corners, no tight spots for dirt to get into
~ • The Advantages of the Fiberglass Springs are: ~
Fiberglass Springs
• **Lightweight** A fiberglass spring weighs 22 lbs. less than a steel spring, 44 lbs. less weight on the carriage.
• **Durable One Piece Design** No bolts to give out or wear.
• **Better Performance With Heavy Loads** The more weight, the better the ride, will not go flat and bottom out.
• **No Rusting Ever** Paint will not blister or peel off. No rust stains running out between the plys, providing a nicer appearance and much easier cleaning.
• **A Lifetime Guarantee** If these springs ever break under normal use, we will replace them free of charge.
• **Stabilizer Kits – Now Available** For a smoother ride and less bounce
★ Install these wheels and springs on your next new carriage or replace your old ones ★

Starling Control?

Ken Bolton
Dairy and Livestock Agent
University of Wisconsin

Starlings are a particular nuisance around livestock facilities.

Beyond the general mess they leave around roosting areas it is also known that they carry diseases that infect livestock.

Perhaps the term starling control is an oxymoron. Much like time management, it is impossible to directly manage either time or starlings. To maintain our sanity when it comes to time or starling management we need to accept that we can only control one thing, ourselves.

Of the several damage prevention and control methods available including frightening, repellents, toxicants, trapping and shooting; only good housekeeping and exclusion are truly viable options. No fumigants are registered for starling control and the once popular Avitrol (Starlicide) product is no longer on the market.

The first step in discouraging starlings from feeding or roosting around livestock facilities is to practice good housekeeping. Clean up spilled grain. Store and feed grain in bird proof facilities or at least in covered facilities.

You may also be able to use feeds in a form that birds can't swallow such as cubes or large pellets, however, 3/16 inch pellets actually favor starling consumption. Since starlings prefer to feed in the early to mid-morning, avoid feeding during this time.

Starlings are attracted to water so good drainage to prevent puddles in livestock areas is helpful and draining unused livestock waterers will discourage the birds as well. If fairly deep waterers are used, lower the water level to a point where the birds can't reach it.

Secondly, exclusion by covering all openings over one inch can be very effective. Many newer buildings are now available with bird netting covering eve and ridge opening's in naturally ventilated buildings. Netting can also be placed under rafters.

This netting can be added to existing buildings as well. Once these openings are covered the birds will still use open doors to gain access to the building. Covering doorways with plastic stripping has been successful in excluding birds. These tactics are more successful in confinement buildings than where animals have free access to enter and leave.

Some newer building designs also offer "no perch" options. Retrofit options such as metal, wood, or Plexiglas ledges at a 45-degree angle over ledges or porcupine wire may prevent perching. Contact your farm supply dealer or lumber yard-/builder for these products.

Neither baiting nor trapping are considered particularly effective and may require a permit from DNR. Much like the other less effective methods mentioned above, baiting and trapping are not preferred due to the challenge of convincing the birds to enter the trap or to eat the poison. There are also no registered pesticides approved for starlings at this time.

One baiting option that has been used, is considered to be fairly safe and is confirmed effective by experts in the bird nutrition field is the use of sodium bicarb. The challenge is to get the birds to eat it by mixing it into the feed they are accustomed too. As little as 3-5% of a bird's total dry matter intake as sodium bicarb is lethal.

One strategy that has been used in the field is to mix ⅓-½ bicarb with a small amount of TMR and place it beyond the reach of the cattle in a drive-by feeding facility. A downside to the strategy is becarb's lethal effect on non-target birds. I also question whether or not starlings are major consumers of TMR or are simply visiting freestall barns for water and perhaps roosting areas.

Do your own evaluation before selecting a baiting strategy.

Yes, those darn starlings are quite the nuisance and represent a herd health risk. Eradication is impractical and control may be difficult but is possible by using the Housekeeping and Exclusion Method described earlier.

Correction

It was reported in last week's paper that tobacco growers who are members of the Pennsylvania Tobacco Marketing Association must pay 3 cents per pound for tobacco sold privately next growing season. That is incorrect, according to Dennis Hess of the association. Anybody who was a member of the association the past two years, if they sold privately or at auction, are obligated to pay the association 3 cents per pound for tobacco sold. Growers who were members the past three years would pay one cent a pound on tobacco for 1998, and three cents a pound for tobacco sold from 1999-2000.

For next year, there is no auction in the plans, so there will be no per-pound charge for tobacco grown. Growers selling to private contract are not obligated to pay the 3 cents a pound, according to Dennis Hess of the association. Contact Hess at (717) 626-6970.

FARMERS!!!
Sell your fruits and vegetables at farmers' markets in Philadelphia.

Philadelphia city dwellers love the taste of fresh, farm-grown fruits and vegetables.

Do you grow or produce any of the following?
(Farms of any size are welcome!)

- Organic and conventionally grown vegetables
- Tree fruit and berries
- Cut flowers, potted plants, and herbs
- Chicken, lamb, pork, beef, goat meat
- Fish from the sea or hatcheries
- Eggs, milk, cheese, and honey
- Bakery goods of all kinds
- Jams, jellies, and preserves

If you do, call
Bob Pierson
Toll free (866) 745-6587
or e-mail: phillymarkets@aol.com
for information about market locations and schedules.

Farm to City
Farm to City is a program of the Oley Institute.

Clean, fresh, quality drinking water on your farm could make a bigger difference than you think.

The Sweetest Way to Say 'I Love You'

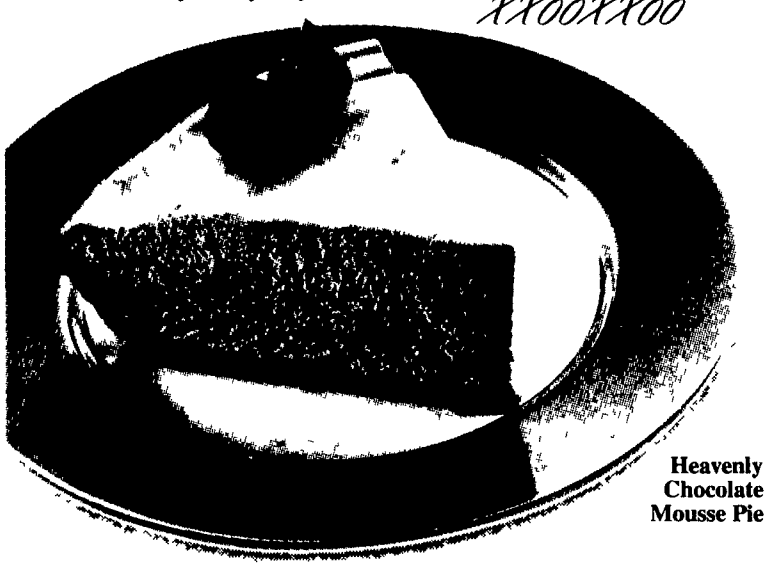
From top: Foolproof Fudge, Chocolate Fantasy Nut Bars, Chocolate Bars

On Valentine's Day or any other day, you can sweeten up your life a little with a heartfelt indulgent dessert. Whether it's a luscious Tiramisu for two or falling head over heels for Chocolate Fantasy Nut Bars, there's no better way to say "I Love You" than to give a gift that was made especially for your loved ones. And if you really want to tug on their heartstrings, why not bake up some delicious Chocolate Bars or a Heavenly Chocolate Mousse Pie? You're sure to get some hugs.

And don't forget the treat that everyone loves—Foolproof Fudge, guaranteed to cast a spell.

So now you don't need Cupid to make yourself "simply irresistible" because you can make Valentine's Day every day!

XXOOXXOO



Heavenly Chocolate Mousse Pie

HEAVENLY CHOCOLATE MOUSSE PIE

Prep Time: 20 minutes Chilling
Time: 15 minutes
Makes one 9-inch pie

- 1 (9-inch) baked pastry shell or chocolate cookie crust
- 1 (14-ounce) can sweetened condensed milk (NOT evaporated milk)
- 2/3 cup water
- 1 (4-serving size) package chocolate flavor pudding mix (NOT instant)
- 1 (1-ounce) square unsweetened chocolate
- 2 cups (1 pint) whipping cream, stiffly whipped

1. In large saucepan, combine condensed milk, water and pudding mix; mix well Add chocolate
2. Over medium heat, cook and stir rapidly until chocolate melts and mixture thickens
3. Remove from heat; beat until smooth.
4. Cool. Chill thoroughly, stir. Fold in whipped cream.
5. Pour into prepared pastry shell. Chill 4 hours or until set. Garnish as desired Refrigerate leftovers.

Microwave:* In 2-quart glass measure, combine condensed milk, water, pudding mix and chocolate as above; cook on 100% power (HIGH) 5 to 6 minutes, stirring after 2 minutes, then after each minute until thickened. Proceed as above.
*Microwave oven may vary in wattage and power output; cooking times may need to be adjusted.

TIRAMISU

Prep Time: 30 minutes Chilling
Time: 4 hours Makes 8 servings

- 2 tablespoons instant coffee crystals
- 1/2 cup hot water
- 2 (3-ounce) packages ladyfingers (24), cut crosswise into quarters
- 1 (14-ounce) can sweetened condensed milk, divided (NOT evaporated milk)
- 8 ounces mascarpone or cream cheese, softened
- 2 cups (1 pint) whipping cream, divided
- 1 teaspoon vanilla extract
- 1 cup (6 ounces) miniature semi-sweet chocolate chips, divided Grated semi-sweet chocolate and/or strawberries, optional

1. Dissolve coffee crystals in water; set aside 1 tablespoon of the coffee mixture Brush remaining coffee mixture on cut sides of ladyfingers; set aside.
2. With mixer, gradually beat 3/4 cup of condensed milk into mascarpone in large bowl. Add 1 1/4 cups of the whipping cream, vanilla and reserved coffee mixture; beat until soft peaks form. Fold in half of the chips.
3. In small saucepan, melt remaining chips with remaining condensed milk.
4. Using 8 tall dessert glasses or parfait glasses, layer mascarpone mixture, chocolate mixture and ladyfinger pieces, beginning and ending with mascarpone mixture. Cover and chill at least 4 hours.
5. To serve, with mixer beat remaining whipping cream until soft peaks form. Spoon whipped cream over layered dessert. Garnish with grated chocolate and strawberries if desired. Store leftovers covered in refrigerator.

CHOCOLATE BARS

Prep Time: 10 minutes
Baking Time: 25 to 30 minutes
Makes 24 bars

- 1/2 cup (1 stick) butter
- 1 1/2 cups graham cracker crumbs
- 1 (14-ounce) can sweetened condensed milk (NOT evaporated milk)
- 1 cup (6 ounces) semi-sweet chocolate chips*
- 1 cup (6 ounces) peanut butter flavored chips*

1. Preheat oven to 350°F. In large 13x9-inch baking pan, melt butter in oven.
2. Sprinkle crumbs evenly over butter; pour condensed milk evenly over crumbs. Top with remaining ingredients; press down firmly with spoon.
3. Bake 25 to 30 minutes or until lightly browned. Cool. Cut into bars. Store covered at room temperature.

Tiramisu

*NOTE: You may substitute butterscotch flavored chips or white chocolate chips for the semi-sweet chocolate chips and/or peanut butter chips.

FOOLPROOF FUDGE

Prep Time: 10 minutes Chilling
Time: 2 hours
Makes about 2 pounds

- 3 cups (18 ounces) semi-sweet chocolate chips
- 1 (14-ounce) can sweetened condensed milk (NOT evaporated milk)
- Dash of salt
- 1/2 to 1 cup chopped nuts, optional
- 1 1/2 teaspoons vanilla extract

1. Line 8 or 9-inch square pan with foil. Butter foil; set aside.
2. In heavy saucepan, melt chips with condensed milk and salt. Remove from heat. Stir in nuts if desired and the vanilla. Spread evenly into prepared pan.
3. Chill 2 hours or until firm. Turn fudge onto cutting board, peel off foil and cut into squares. Store covered in refrigerator.

Variations: Peanut Butter Chip Glazed Fudge: Omit nuts. Stir 3/4 cup peanut butter flavored chips in with vanilla. Spread in pan and chill as above. For glaze, in small saucepan, melt 1/2 cup peanut butter flavored chips with 1/2 cup whipping cream, stir until thick and smooth. Spread over chilled fudge. Chill Cut and store as directed above.
Marshmallow Fudge: Omit nuts. Stir 2 tablespoons butter in with vanilla. Fold in 2 cups miniature marshmallows Proceed as above

CHOCOLATE FANTASY NUT BARS

Prep Time: 15 minutes Baking Time: 25 to 30 minutes
Makes 24 to 36 bars

- 1 (18 1/4 or 18 1/2-ounce) package chocolate cake mix
- 1/3 cup vegetable oil
- 1 egg
- 1 cup chopped nuts
- 1 cup (6 ounces) semi-sweet chocolate chips
- 1 (14-ounce) can sweetened condensed milk (NOT evaporated milk)
- 1 teaspoon vanilla extract
- Dash of salt
- Purchased tube of decorating icing, optional

1. Preheat oven to 350°F. With mixer on medium speed, beat cake mix, oil and egg in large bowl until crumbly. Stir in nuts. Set aside 1 cup of the crumb mixture. Firmly press remaining crumb mixture on bottom of greased 13x9-inch baking pan.
2. In small saucepan, melt chips with condensed milk, vanilla and salt. Pour evenly over prepared crust. Sprinkle reserved crumb mixture evenly over top. Bake 25 to 30 minutes or until edges are firm. Cool. Cut into bars. Drizzle with icing if desired. Store loosely covered at room temperature

Lancaster County 4-H Benefit Auction Is Feb. 17

Katina Showman and Kevin Hoober arrange donated items that will be auctioned Feb. 17, 9:30 a.m. to raise funds for the 4-H program. County Commissioner Pete Shaub is the auctioneer for the event to be conducted at the Farm and Home Center, 1383 Arcadia Road, Lancaster.

LANCASTER (Lancaster Co.) — The 15th annual 4-H Benefit Auction will take place on Saturday, Feb. 17 beginning at 9:30 a.m., in the Farm and Home Center Auditorium, 1383 Arcadia Road, Lancaster.

The auction will feature items including eggs, flour, Wenger's hamloaf, animal and pet products, Winross and ERTL trucks, Breyer models, live plants, cook books, tools and much more. A few special items include a decorated vine wreath from The Olde Millhouse Shoppes, a photograph signed by Penn State Football Coach Joe Paterno, four children's pedal tractors, and signed and numbered prints of Lancaster County sites. Numerous gift certificates for merchandise and area services will also be sold.

Food items will be sold throughout the day by participants of the 4-H Exchange Program. Proceeds from the auction will benefit the county's 4-H program, through the purchase of educational materials, entry fees to events, transportation costs, volunteer leader support, and other 4-H expenses. The program serves nearly 3,500 youth, ages 8-19, in "learn-by-doing" 4-H projects and emphasizes the development of life skills. The program also has the support of more than 500 adult and teen volunteer leaders.

Gift certificates to be sold for services and merchandise include: Gibraltar, The Village Greens, Doc Holiday, Bube's Brewery, The Amish Village, The Castle Roller Skating, Hoss's, Dutch Apple Dinner Theatre, Esbenshade Turkey Farm, and Fulton Opera House. Tickets for the Strasburg Rail Road, Hershey Bears Hockey, Rainbow Dinner Theatre, and Sight and Sound performance of "Behold the Lamb" will also be available.

To receive a complete list of sale items or make a donation for the auction, contact the Lancaster County Cooperative Extension office at (717) 394-6851.

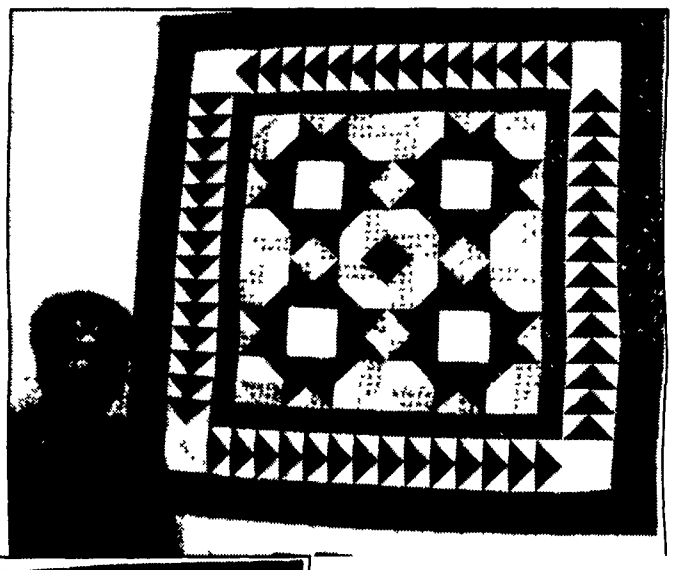
Workshops Teach Quick, Easy Applique

LANCASTER (Lancaster Co.) — Carol Lee Shirk is teaching two workshops for those who are interested in creating quilted wallhangings with quick and easy methods. The workshops are available through the Lancaster Extension. Participants must preregister and class size is limited.

Register by sending your name, address, phone number, and workshop title with a check payable to Agricultural Extension. No registration is accepted without payment.

• Frolicking With The Geese - teaches an easy way to make flying geese with perfect points every time. There are no triangles to cut. Cost is $35. It is too late to participate in the classes that began this week, but if interested call Shirk (717) 394-6851 for upcoming dates

• Butterfly Love is an applique wallhanging for those who don't have time to hand stitch. Using a sewing machine, participants will learn how to interface reverse applique which quilts and appliques at the same time. Cost is $35 plus pattern fee. Workshop is March 10, 9:30 a.m.-3:30 p.m.

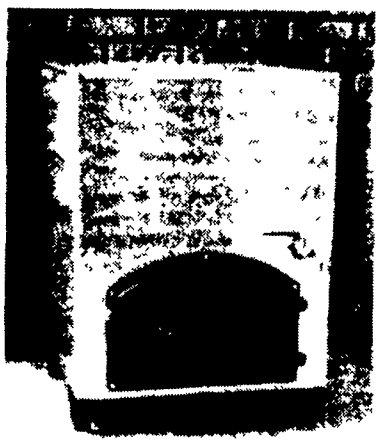


Instructor Carol Lee Shirk stands with the wallhanging called Frolicking With The Geese. A workshop creating the wall hanging Butterfly Love teaches machine applique and machine quilting.

D.S. Stainless Steel Canners

Rectangular Canners
Sizes: 24" x 24" ($429.00)*

Round Canner
Size: 25" round ($389.00)*
Features: Double wall firebox for maximum heat protection and minimum heat loss; drain valve; all cast iron door and frame; 6" flue with baffle; portable; for use indoors or outdoors; uses minimum amount of wood
Use: canning, frying, soup making, or lots of hot water
Optional: LPG burner



* Price includes wooden can rack and stainless steel lid.

Do You Suffer From Fibromyalgia?

When I was introduced to New Image I was 50 pounds over weight and suffered from fibromyalgia I was so depressed and in pain the majority of the time I was taking steroids and four other medications, one of which made me so 'groggy' I could hardly get out of bed and another gave me ulcers I began taking New Image secretly because I thought my family would make fun of me After a month, I discovered I had lost eight pounds and seven inches Wow! Then it dawned on me, I was feeling better, the depression and pain were gone In two months I was off all medications "I feel SUPERIFIC!" Now, two years later I have lost 43 pounds and 30 inches Thank you New Image for giving me a new life again Judy Swift - Mt Washington, KY

Belgium Man Solicits Amish Harness Maker To Accomplish New Feat For Guinness Book Of World Records

GAY BROWNLEE
Somerset Co. Correspondent

SPRINGS (Somerset Co.) — A person might ask how in the world a wealthy businessman from Elsegen, Belgium discovered the whereabouts of an Amish harness maker in the tiny village of Springs, Pennsylvania.

Willy Naessens needs to have 76 sets of harness made by May. He discovered the services of harness maker Mark Brenneman. Later this year his notoriety with a 76-horse hitch, will be official in the Guinness Book of World Records.

We're talking 19 rows of Belgian draft horses walking four abreast, for a qualifying mile. The four animals foremost, upon hearing the voice of driver Naessens giving directives through a microphone and speakers, will do the leading. The others will naturally, follow the leaders.

Never mind that Naessens already holds the record. He set it on June 11, 2000 with a 56-horse hitch. On September 4, he is determined to raise the ante by 20 additional draft animals.

In mid-January this year Naessens sent his foreman, Fons De Ridder, the retired Freddy Van Der Snickt, and English-speaking Willy Mertens flying across the Atlantic on a mission to America. The assignment was find and hire the right people to make the gear.

It was Mertens fourth trip to the U.S., so his comrades, on their first North American sojourn, relied on his help.

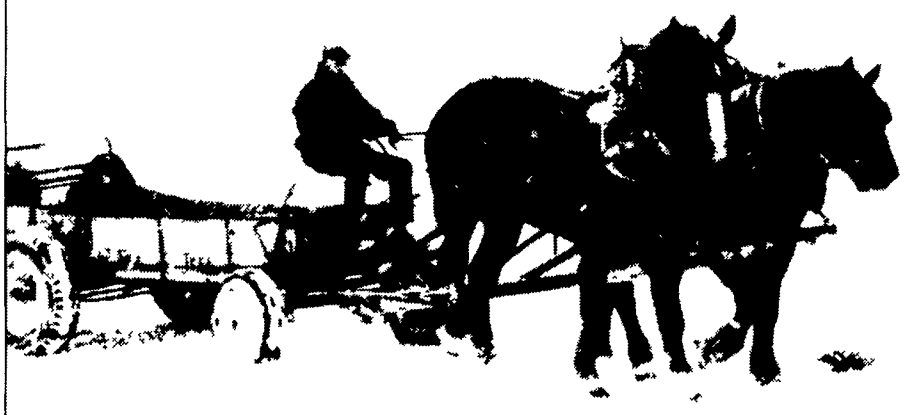
On a snowy January day, from left, Fons De Ridder, Paul Lepley, Freddy Van Der Snickt, Barbara Lepley, Willy Mertens and Butch Lepley gather at the Lepley's farm near Meyersdale where Belgian horses are bred. The group is excited about the upcoming 76-horse hitch featuring 19 rows of Belgian draft horses walking four abreast, for a qualifying mile.

For 10 days the three-men were headquartered in Meyersdale, Somerset County, with Mertens trans-Atlantic friend, Dwight "Butch" Lepley and Barbara, his wife, her son, Brandon Stern, 17, and Paul Lepley, a brother.

Among other of his enterprises, Lepley breeds Belgian draft horses and raises Limousin cattle on a 652-acre farm identified by the title 'Wood-N-Horse Ranch." The significance is that Lepley also operates a timbering business.

Between Summit and Brothersvalley Townships in the southern part of the county, the now combined farms, formerly, were those owned by Earl M. Walker and Edgar Schrock.

"I could ride a horse before a bicycle," said Lepley, in a childhood reminiscence about his early acquaintance with draft animals. In the last years he has been breeding back to a heavy-type pulling horse, instead of the hitch horse he says most people prefer. It takes a good deal of patience and heavy financial investment.



Fons De Ridder, on the wagon is a Belgian guest of Dwight "Butch" Lepley, Meyersdale. Ridder is directing a team of Belgian draft horses while commandeering a horse-drawn manure spreader. To him it is an amazing piece of machinery.

After touring Ohio and Pennsylvania in behalf of Naessens, the guests placed orders for some of the other equipment that will be needed, including sweat pads for under the collars. These will be made in Pleasantville, Ohio. Out of deference to the United States, Naessens want the pads in solid colors of red, white and blue.

"American harnesses are better made," Mertens said. "They fit better and are easier to work with." In his homeland, he said, it would take many years to fill such an order.

"The best harnesses in this country are made in Pennsylvania or Ohio," Lepley stated.

Ordinarily, when he goes to Snyder County to restock the supply of belting material from which the harnesses are cut at his Springs Road establishment, Brenneman wouldn't usually be pressed to purchase more than half a ton at a whack, as he did recently.

But being confronted, so unexpectedly, with the rather urgent contract, Brenneman has begun working, expeditiously, hoping the man he has never met or spoken to in the course of his life, will be completely satisfied with the result.

"I never expected the local people to be this excited," said Joel Brenneman, Mark's son about the delight their friends and neighbors who heard the interesting gossip, are expressing. Everybody is begging to know more and there is little else to tell.

Joel's brother, Daniel is foreman of the harness division and brother Floyd helps in the business the four men operate not far from the rural intersection of the Oak Dale and Niverton Roads.

Mertens said the 76-horse hitch will be comprised of Naessen's eight horses and private stock volunteered by eager friends and neighbors. Thus, for their contribution, an invitation to ride in the wagon he will be commandeering with De Ridder by his side, is given to the owners. So while they parade before a cheering crowd at Waregem, the owners, according to Mertens, will bask with Naessens in his moment of glory at the home of Belgium's most notable annual steeplechase event.

"All owners sit on a big wagon behind the hitch with Willy and Fons," Mertens said.

Apparently, the idea is to execute a high profile advertising tactic, intended to win prospective clients for the diversified businessman. He, reportedly, employs 600 persons, and in one aspect of his successful operations, builds swimming pools.

"Willy Naessens is concerned about local industrials who come. They may buy from his business," Mertens explained.

Naessens also plans a philanthropic donation to UNICEF (United Nations International Childrens Emergency Fund), in the amount of $1 for every spectator at the event. And usually, the attendance tops out at 40,000 to 50,000 fans — classy ladies under wide-brimmed hats and their high-brow escorts embellishing the atmosphere with sophistication — Mertens indicated, comparing them to British counterparts.

Officials will certify for the Guinness people that the horses did walk together for one mile without incurring a mishap of any kind. A glitch would mean starting over, then and there, at the point where it happened.

The Lepley and Mertens acquaintance has not been coincidental. In the early 1990s, based on an astonishing picture that also named "Willy Mertens," in the Draft Horse Journal, Lepley had a compelling need to find and talk with the Belgium man.

The photo showed a four-year old Belgium boy handling a team of draft horses that was pulling a plow. The lad turned out to be Merten's son, Wout. Lepley wanted to learn how so young a child could be entrusted with such a responsibility.

Instead of reaching Mertens, frustratingly, his attempts to call always went to Merten's cousin who lived nearby but knew no English. Lepley managed to leave his own telephone number with the fellow.

Mertens, then telephoned Lepley. In 1995 he made the first of four trips to the U.S. He, successively, returned home bursting with new information absorbed from Lepley's books and journals about horses and draft animals. He bought "The Century of Belgian Horses in America," plus a subscription to the Draft Horse Journal for Naessens', boss of his friend, Fons De Ridder.

(Turn to Page B7)

Willy Mertens examines the harness similar to that to be used for the 76-horse hitch planned to set a new record in the Guinness Book of World Records. A harness maker from Springs, Somerset County, is known to make some of the best harnesses in the world. "American harnesses are better made. They fit better and are easier to work with," Mertens said.

Tools of the Trade

A family excursion to the grocery store recently helped Russell and I remember the fun and joy being parents of unpredictable children after a particularly stressful week.

It all started in the cereal aisle. I was busy with my cart at the other end of the aisle when Russell and the boys met a mother of one of the children from Elliot's daycare class. She recognized Elliot and the usual pleasantries were exchanged.

Then it happened. Elliot announced to the lady, "You know my dad's really smart." The lady looked at him politely, and he continued by asking her, "Would you like him?"

Russell can't seem to recall what happened next. Seems he was a bit flustered to be offered up on the spot. The good news is that we're still happily married and chuckling over the things children say.

Young children can bring so much joy to us as parents or caregivers. But as we all know, at times they can be a challenge. Next time you feel a little overwhelmed, remember these positive discipline tips to increase your success in helping your child learn new and more appropriate behaviors. I know first hand how hard this can be and have found it takes lots of practice.

Here's some examples of "tools of the parenting trade" to get you started.

Use positive statements by saying, "Do" instead of "Don't." For example: Say "Hold the puppy gently." rather than "Don't squeeze the puppy." Or say, "Keep your hands in your pockets" rather than "Don't touch that toy."

Change the surroundings or the equipment. For example: Sally always spills milk, so put less milk in the glass, use a sippy cup, or a cup that is easier for her to hold, and give her water, which is easier to clean up.

If Marcus and Deandre kick each other at the table, rearrange chairs so they can't reach each other.

Amanda has knocked over the lamp three times, so move the lamp to a higher table.

Ricky wants to help in the kitchen, and he just picked up a sharp knife. In response, his dad hands him a plastic table knife to use and takes away the sharper knife.

When possible, give the child two or three choices. This helps the child feel in control and capable. For example: Do you want to wear the sweatshirt or blue coat to go outside?

Be careful. Don't offer an open-ended choice such as "What do you want for breakfast." (They may say ice cream and potato chips. They may ask for the kind of cereal you ran out of yesterday.)

Also, don't offer a choice if there is none. For instance, saying "Would you like to go to bed?" When the child must go to bed, it is only asking for a fight. Instead say, "It's time to go to bed."

Give warnings as helps. Children have a hard time switching activities. They need time to adjust. For example, say. "In five minutes it will be time to put the basketball away and come inside." Or "After this television show ends, it will be time to put your pajamas on."

Remember it takes practice to learn to use these tools until they come naturally. Try out a few of these tools this week and see what you think.

What To Ask The Doctor

MONTOURSVILLE (Lycoming Co.) — Before you leave your doctor's office with a new prescription, make sure you fully understand how to take the drug correctly. Your pharmacist can also provide valuable information about how to take your medicines and how to cope with side effects. Ask the following questions:

- What is the name of this drug, and what is it designed to do? Is this a generic or a name brand product?
- What is the dosing schedule and how do I take it?
- What should I do if I forget a dose?
- What side effects should I expect?
- How long will I be on this drug?
- How should I store this drug?
- Should I take this on an empty stomach or with food? Is it safe to drink alcohol with this drug?

Guinness Book

(Continued from Page B6)

Upon reading one of the journals, Naessens espied a photograph of a 40-horse hitch that goes in the Milwaukee Circus Parade every year. Immediately, his mind was made up to do a similar thing in his country.

When Naessens sought counsel where so many sets of harness for a 76-horse hitch might be purchased, Mertens answer was instant. The craftsmen able to facilitate the project were in America, Mertens told him.

His natural Dutch tongue served Mertens well in communicating with the High German of the Amish.

'It was kind of a treat, sometimes it took an hour to communicate," Lepley said about De Ridder — who, until then, had never seen a horse-drawn manure spreader at work — and Van Der Snickt.

As they traveled and ordered restaurant fare, Lepley did the ordering for his guests. He knew his guests enjoyed beef and ham, but was surprised when they refused to eat corn and called it "mice." Neither did the guests like beans of any kind. Applebutter and maple syrup they loved, and took some home when the left.

Lepley, in early May will gather, crate and ship everything to Antwerp in the Netherlands.

The American role players have been invited by proxy, to visit Belgium in September for the big event. So far, Barbara Lepley is the first to have begun the passport process.

STALLS

If you are looking for a recipe but can't find it, send your recipe request to Lou Ann Good, Cook's Question Corner, in care of *Lancaster Farming,* P.O. Box 609, Ephrata, PA 17522. There's no need to send a self-addressed stamped envelope. If we receive an answer to your question, we will publish it as soon as possible. Check your recipe to make sure you copy the right amounts and complete instructions for making the recipe. Sometimes we receive numerous answers to the same request, but cannot print each one.

Answers to recipe requests should be sent to the same address. You may also e-mail questions and answers to lgood.eph@lnpnews.com

Notice: Several readers write that they have problems accessing this address. The common mistake is that readers are substituting an "i" for the lowercase "l (L)" needed in two places. If you are having problems reaching this address, please check to make sure you are typing a lowercase "l (L)" in both places and not a lower or uppercase "i" or "I."

QUESTION — A reader requests recipes for fruit soups made without alcohol.

QUESTION — Jim Testerman, Mercersburg, requests a recipe for baked oatmeal.

QUESTION — Jim Crater, Mohnton, wants a recipe for pickled green beans sometimes referred to as dilly beans. He writes that his ex-wife took the recipe with her when she left, and he sure misses those beans.

QUESTION — A Somerset reader wants recipes for Pasta Fazool or Fasoul and for Catalina French Salad Dressing.

QUESTION — Naomi Becker requests a recipe for Apricot Crumb Pie using dried apricots.

QUESTION — A York County reader wants a recipe for apple cake using a boxed cake mix and raw apples.

QUESTION — A York County reader wants a recipe for Chicken-Peanut Casserole that tastes like that served at Hershey Farms Restaurant.

QUESTION Debbie Reynolds, Wrightsville, writes that she always has problems with her carrot cake falling in the middle. She tried adding more flour, but it still fell. Does anyone know what causes it and what can be done to remedy the problem?

QUESTION — Erma Zimmerman, Williamsburg, wants a recipe for pesto sauce.

QUESTION — A reader would like a recipe to make apple or cherry turnovers like those served at Arby's Restaurant.

QUESTION — Eleanore Henne, Bernville, wants a recipe to make cashew brittle in the oven, not on the burner. She does not have a microwave so do not send directions using a microwave.

QUESTION — Tammy Coleman, Millersburg, wants a recipe to make pumpernickel bread in a bread machine.

QUESTION — Marlin Winters, Elizabethtown, wants a recipe for a good moist carrot cake without nuts. She especially likes those sold at Darrenkamp's Store.

QUESTION Frances Hanlin, Mt. Storm, W.V., writes that she is having trouble churning butter. They have churned butter for years, and she thinks they are doing everything the same as before. The cows are the same and the feeding the same, but when the cream is churned, it whips up but the butter particles won't gather together. Anyone have some insight into the cause of this problem?

QUESTION — Shirley Schwoerer, Wysox, would like a recipe for strawberry butter.

QUESTION — R. Diehl, Bloomsburg, wants a recipe for white chocolate brownies and for white chocolate cake.

QUESTION — Jackie Hall, Saye, Va., wants a recipe to make butter from milk purchased from supermarkets. She also is looking for a used butter separator. Editor's Note: I don't think it is possible to make butter from homogenized milk because the cream will not separate from the milk. However, purchased cream may be used.

QUESTION — Kelly Judge, Hampstead, Md., requests a recipe for hot pepper relish that sub shops use as a hoagie spread. She would like to can the spread.

QUESTION — Rachel Beiler, Paradise, requests a recipe for steak sauce.

QUESTION — A steady reader would like to know why the pickled garlic she made turned green. She used a recipe in this column, but after several weeks the garlic turned green. Is it safe to eat? Also, how can you keep garlic during winter months without it drying out? Any information and recipes for garlic would be appreciated.

QUESTION — Bob Snyder, Akron, Ohio, requests a recipe for hot rice, which includes onions, tomatoes, and other ingredients. He has tasted the mixture in restaurants, but isn't sure of the ingredients.

QUESTION — Jody Applebee wants a recipe for corned beef hash that tastes like that served in restaurants.

QUESTION — Jacob Beiler, Holtwood, would like to have some recipes for cheese making. Also, he would like to know where to buy rennet tablets.

QUESTION — Annie Kauffman, Honey Brook, wants a recipe to make butterscotch or caramel topping for ice cream that tastes like Smuckers' toppings.

QUESTION — A reader would like a recipe for chocolate filled cookies and for raspberry filled cookies like they make at Bird-in-Hand Bake Shop.

QUESTION — Em Snyder, Red Lion, would like a recipe to make venison sweet bolgona. How long does it need to hang before smoking and how long should it hang before using?

QUESTION — Dotty Gaul, Douglassville, writes that when she was growing up in the Harrisburg area during the 1950s, her family went to the Blue Parasol, a drive-in restaurant with curb service. They served pork barbecue sandwiches with no tomato sauce but with relish. She thinks it was pork simmered in chicken broth with some other ingredients. Does anyone have a recipe that sounds similar to what Dotty describes?

QUESTION — A. Guidas wants a recipe for pumpkin funnel cakes.

QUESTION — A Gordonville reader wants a sour dough recipe. She tasted some from the Reading Terminal Market, and would like to have a recipe that is similar to that sold there.

QUESTION — C. Faus wants to know how to make homemade rice cakes. She writes they are nice for wheat-free diets but expensive to buy.

CORRECTION — Eugenia Emert, Catasauqua, wanted a recipe for pumpkin cream cheese cupcakes, which are similar to the chocolate or black bottom cream cheese cupcakes. Debbie Reynolds, Wrightsville, submitted one that was printed in last week's issue. However, she inadvertedly forgot to include the baking soda, so here is the corrected version.

Pumpkin Cream Cheese Cupcakes

2 cups flour
2 teaspoons baking powder
½ teaspoon salt
¼ teaspoon baking soda
½ teaspoon cinnamon
¼ teaspoon ground cloves
½ cup butter, softened
1½ cups brown sugar
2 eggs
¾ cup pumpkin
¼ cup buttermilk

Sift together flour, baking powder, salt, baking soda, cloves, and cinnamon.

Beat together butter and brown sugar. Add eggs and beat until light and fluffy.

Mix pumpkin and buttermilk in a small bowl. Alternately add flour mixture and pumpkin mixture to butter, end with flour.

Cream Cheese Filling:
Beat until well mixed:

8-ounces cream cheese
1 egg
½ cup sugar

Fill cupcake papers one-third full with cake batter. Add ½ teaspoon cream cheese mixture on top. Bake at 350 degrees for 15-20 minutes or until cupcakes are done.

Thanks to Mrs. Sensenig, Ephrata, for sending this recipe that she clipped from this column several years ago. Whenever she makes these, she gets quite a few requests for the recipe.

Yummy Pumpkin Cupcakes

2 cups pumpkin (mashed)
2 cups sugar
4 eggs
¾ cup vegetable oil

Mix the above ingredients together. Sift together the following ingredients and add to the pumpkin mixture.

2 cups flour
1 teaspoon salt
1 teaspoon baking powder
2 teaspoons baking soda
1 teaspoon cinnamon

Mix well and fill cup cake papers half full of batter and top with 1 teaspoon of topping. Bake 15-20 minutes at 350 degrees.

Topping:

8-ounces cream cheese
1 egg
½ cup sugar
Dash salt
6-ounces chocolate chips

Cream cheese, egg, sugar, and salt, add chocolate chips and mix.

Makes 36 cupcakes.

ANSWER — Thanks to Ruth Klingler, Selinsgrove, for sending two different recipes, which had been requested by Linda Smith, Walpole, N.H.

Brandied Fruit Starter

15¼-ounce can pineapple chunks
17-ounce can apricot halves
16-ounce can sliced peaches
10-ounce jar maraschino cherries
1¼ cups sugar
1¼ cups brandy

Combine all ingredients in a clean non-metal bowl and stir gently. Cover and let stand at room temperature for three weeks, stirring twice a week. Starter is now ready to use.

Reserve 1 cup of starter at all times or you'll need to start all over again. To replenish starter, add 1 cup of sugar and 1 of the four fruits listed. Add another fruit every week for the next three weeks, stirring gently each time. Cover and let stand at room temperature three days before using. Apricot or peach brandy can be used and fruit cocktail substituted for peaches or apricots.

Brandied Fruit

For starter, place in a 1-quart container with loose-fitting top, stir 3-4 times the first day:

¾ cup drained, chopped pineapple
¾ cup drained, chopped peaches
6 chopped maraschino cherries
1½ tablespoons dry yeast

At the end of two weeks, add 1 cup chopped pineapple and 1 cup sugar. Stir every 2-3 days.

After another two weeks, add 1 cup chopped peaches and 1 cup sugar. Stir every 2-3 days. Two weeks later, add 1 cup chopped maraschino cherries and 1 cup sugar. Stir every two or three days and let it work for at least two weeks. To keep the starter going, add more fruit and sugar every two weeks.

At the end of the eighth week, the addition of fruit and sugar in the above order and amounts should be started all over again. You may have to put the starter in a larger jar. Never use citrus fruits or let the starter drop below 3 cups. Apricots can be used. Never refrigerate or seal the jar.

Friendship Cake

1 yellow cake mix
⅔ cup oil
4 eggs
⅓ cup starter juice (drained liquid from starter)
1 small box instant vanilla pudding
2 cups starter fruit
1 cup chopped nuts

Mix together all ingredients for cake and bake in greased tube or bundt pan at 350 degrees for 50-70 minutes.

ANSWER — Polly Weiss, Woxall, wanted to know where to find yellow corn meal to make mush. She wrote that the stuff sold in supermarkets doesn't taste like the corn meal that feed stores used to sell. Thanks to Karen Moyer, Portage, for writing that she had the same problem in Cambria County, but she found a good source called Brinser's Best manufactured by James H. Haldeman, 1466 Jerry Lane, Manheim, PA 17545. The homeground corn meal is available in many stores in the Lancaster and Lebanon County area.

If you are really ambitious, Elizabeth Stoltzfus, Millersburg, writes that you can make your own yellow corn meal to make mush. If you live near a neighbor who farms, ask if you can gather ears of corn in the fall after the corn has dried. Bring the ears of corn into the house and lay them out to dry in a warm place for another 2-3 weeks. Then shell off the corn and take it to a grinder at a feed mill to be ground into corn meal.

ANSWER — Carrie Sponseller, Gettysburg, requests a recipe to make homemade pot pie to dry and store until needed. Thanks to Karen Moyer, Portage, for sending this recipe.

Homemade Pot Pie

1 egg
1 tablespoon shortening

(Turn to Page B9)

Charging Your Grocery Bill?

Supermarket checkouts are just another place to hand over your credit card. Supermarket chains accept credit cards as a convenience to their shoppers in the hopes of winning sales from the added service.

Now that you can charge your weekly groceries, be cautious. Consumers do spend more when they begin to use credit. If you are used to going to the grocery store with a list of items, continue to shop by sticking to your list. Also, have a certain dollar amount that you plan to spend, and don't exceed it. It's too easy to go through each aisle and fill your cart with more than you need, knowing you're going to charge it.

Now that credit card acceptance in grocery store check-out lines is the norm, remain a smart shopper with the following tips:

• Log your credit card purchase just like checks or share drafts. Keep a register for your charges so that you can keep track of each charge amount you make.

• Clip coupons and shop with them. Most grocery stores offer "double coupons." If yours does not, find one that does. You'll be surprised how much money you can save.

• But don't buy an item just because you have a coupon for it, and don't assume an item is a bargain just because it's on sale.

• Compare brands for the lowest price offered for the same item. Items are easy to compare, just check the list of ingredients if you're not sure.

• Consider trying generic paper products, toiletries, canned goods, etc. If you don't like them, you can always go back to your regular brand.

• Seek out a food warehouse in your area. No-frills warehouses are usually located on the outskirts of larger towns and are open to members who pay a yearly membership fee. Warehouse-sized supermarkets are usually operations with minimum service and maximum discounts for food, clothing, appliances, toys, etc.

• Make sure the credit card you carry is the best one for you. If you pay off your balance each billing cycle, look for a card with a grace period and no annual fee. If you do not pay off your balance each month, make sure to use a card with a low annual percentage rate. It's worth noting that the Consumer Federation of America says that credit unions are the best thing since sliced bread.

• When charging items, watch your card after giving it to a clerk. Take your card back promptly after the clerk is finished with the transaction and make sure it is your card.

• Never sign a blank receipt. Draw a line through any blank spaces above the total when you sign receipts.

• Check your credit card bills when they arrive and compare them with your receipts to make sure that are no unauthorized charges or billing errors.

Charging groceries may be a great convenience, but also an expensive way to finance food purchases if you don't keep a handle on your credit card use. It pays to use credit wisely.

Cook's Question

(Continued from Page B8)

2 tablespoons water
½ teaspoon salt
½ teaspoon baking powder

Add flour enough to make a stiff dough. Roll on floured board. Roll thin and cut into squares.

Karen allows the squares to dry at room temperature for about a day. Turn the squares over every now and then to assure they dry on both sides.

ANSWER — A reader wanted a recipe for chocolate chip cookies with a fudge-like filling. Thanks to Michele Schwerin, Peach Bottom, for sending a recipe she received from her aunt several years ago.

Filled Chocolate Chip Cookies

Cookie recipe:
3 cups flour
1 cup butter
1 cup brown sugar
2 teaspoons vanilla
1 egg
½ cup mini-chocolate chips

Cream butter, sugar, and vanilla. Add egg, beat until creamy. Add flour, mix well. Stir in chocolate chips.

Roll a teaspoon full-size of dough into a ball. Place on a greased cookie sheet. Make a thumbprint dent in center. Bake at 375 degrees for 5-7 minutes. Press down center and bake until slightly brown (another 5 minutes).

Cool, then roll cookie in powdered sugar.
Prepare filling
Filling:
1 cup semi-sweet chocolate chips
1 tablespoon butter
2 tablespoons light corn syrup
1 tablespoon water
1 teaspoon vanilla

In a small saucepan over low heat, melt chocolate chips and butter. Stir in remaining ingredients and stir until smooth. Fill cookies and let cool until filling hardens.

ANSWER — N. Kring, Somerset County, wanted a recipe for kettle corn, which is a sweetened, salted popcorn sold at county fairs and festivals. Thanks to Stanley Owens, Beech Creek, who writes that this recipe tastes like kettle corn.

Sugary Popcorn
¼ cup vegetable oil
½ cup unpopped popcorn
3 tablespoons sugar

Heat oil in 3-quart saucepan over medium-high heat. Add popcorn and sugar. Cover and shake over heat until the popcorn stops popping. Add a little salt. Yields: 11 cups.

ANSWER — G. Sweitzer, Airville, wanted to know where she can buy "A Complete Guide to Home Meat Curing," published by Morton Salt. Also, did the Enterprise Meat Grinder Company publish detailed instructions or a recipe book? Thanks to C. Martin writing that they have the book. Write to them at 504 Grist Mill Rd., Ephrata, PA 17522.

'Love And Chocolate' Celebration Draws Big Hearts To Hershey

ANDY ANDREWS
Lancaster Farming Staff

HERSHEY (Dauphin Co.) — About an hour into the celebration of "love and chocolate," according to fundraising promoters, the hall was packed to capacity. Tickets were sold out.

Chocolatefest, a benefit for Keystone Human Services, tempted fest-goers with all sorts of goodies.

About 3,000 packed the Great American Hall at the Hershey Lodge and Convention Center Sunday for a little indulgence — all for a good cause, of course.

Eighty-nine booths and 75 volunteer vendors (out of a total of about 300 volunteers altogether) served up anything under the sun in chocolate.

More than 3,000 people paid about $15 at the door to sample the Chocolatefest treats.

This is the sixth year for the event, noted program coordinator Ann H. Moffitt, chief executive officer of the Keystone Partnership, Harrisburg.

Moffitt noted that last year's weekend event drew more than 3,500 chocolate lovers from all over the region.

Sunday's event also featured a silent auction, live entertainment, cake competition, and children's activities.

The ChocolateBall, what Moffitt describes as an elegant, black-tie affair, was conducted Saturday at the Hershey Lodge and Convention Center.

Last year, Chocolatefest Weekend raised more than $100,000 for Keystone Human Services, which includes Keystone Children and Family Services, Capitol Area Head Start, Family Support Associates, and others.

Entertainment was provided by Rosie and the Naturals and the Central Dauphin High School Jazz Ensemble.

Craig Yerger, chef at the Holiday Inn in Grantville, served chocolate soup and "succulent chocolate pizza." While the Cracker Barrel in Harrisburg served fudge — and lots of it Mid-Atlantic Coca-Cola Bottling Company in Lemoyne ladled out Hershey's Chocolate Drink.

Shane Hiner, sous chef of Felicita Golf Retreat in Harrisburg, poured Grand Marnier onto fried strawberries, while fellow chefs doused them deliciously with chocolate syrup.

No celebration of chocolate for a good cause can come complete without the self-described "Got Milk Girls," volunteers for Harrisburg Dairies. From left, Julie Bologna, Julie Grierson, Mallory Meehan, Erika Cook, and Lauren Rowan.

Of course, Hershey Foods itself was present. Jennifer and husband Christian Goss handed out mini Mounds bars, Hershey Kisses with almonds, and plain Kisses.

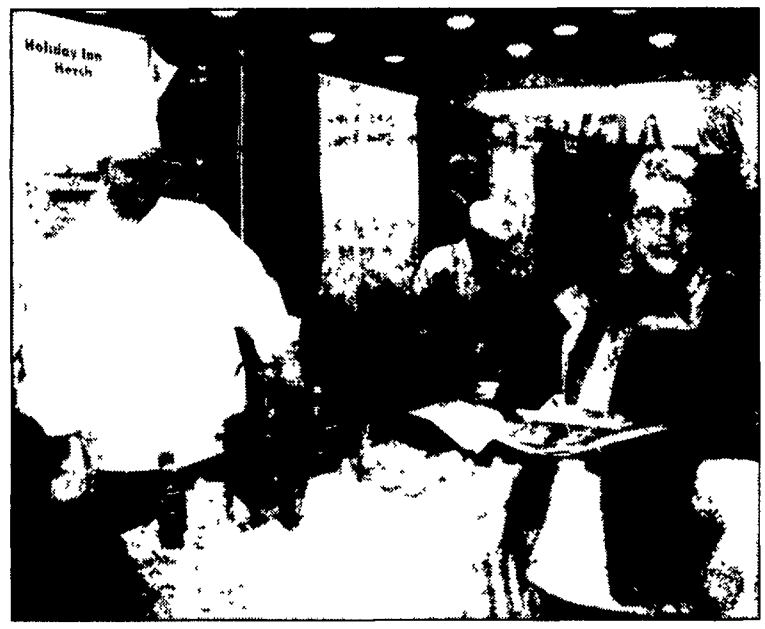
Tracie Gotshall, instructor in baking and pastry arts at the Lancaster County Career and Technology Center, Mount Joy, marked a chocolate praline torte to cut.

And Mui Nocket, Manhattan Bagel in Harrisburg, described two bagels, stacked like giant Hershey Kisses, surrounded by chocolate.

Mari Rowan, whose kids donned balloon hats, said the Chocolatefest is a "wonderful event." Mari said she comes to enjoy the band playing for the delight of attendees.

And while Heather Rose Leiby, daughter of Gena Leiby of Lancaster, feasted on cotton candy ice cream courtesy of Greene's, the "Got Milk" girls were present. They included Julie Bologna, Julie Grierson, Mallory Meehan, Erika Cook, and Lauren Rowan, volunteers for the Harrisburg Dairies.

All photos by Andy Andrews.



Craig Yerger, chef with the Holiday Inn Grantville, dished up chocolate soup and succulent chocolate pizza at Chocolatefest on Sunday.

Alex Kohn, at left, and Mari Rowan and Mari's brother Michael at the Wilbur Chocolate booth at Chocolatefest.

Heather Rose Leiby with mother Gena, Lancaster, sample cotton candy ice cream from Greene's.

Three Inputs Can Directly Affect Corn Yield

ANDY ANDREWS
Lancaster Farming Staff

NEW HOLLAND (Lancaster Co.) — Three basic producer inputs can have a direct relationship on yield, according to an agronomy agent who spoke during a young farmer twilight pesticide meeting

Bob Anderson, Lancaster County crops agent, said the factors are seed, fertilizer, and planting.

When purchasing corn seed, "spend to get the best variety you can afford," Anderson told more than three dozen producers and agri-industry representatives

Anderson, who spoke at a twilight pesticide meeting at the Sylvan Blank Farm in New Holland in late June, said that growers should purchase the company's "top line, not something cheap

"It will pay for itself," he said

Fertilize, noted Anderson, when necessary If you don't need it, "don't buy it," he said "You only need so much of it" Fertilizing includes proper liming

(Turn to Page 2)

Jeff Stoltzfus, center, spoke about different corn herbicide trial rates at the twilight field meeting at the Sylvan Blank farm in June. Producers and ag representatives toured the crop trials at the farm, planted by New Holland farmer Gene Martin. The corn was planted May 5 in about two dozen corn plots, measuring 50 feet long by 10 feet wide (four rows across). *Photo by Andy Andrews*

Nutrient Use Advantage To Dent Versus Flint Corn?

ANDY ANDREWS
Lancaster Farming Staff

QUARRYVILLE (Lancaster Co.) — Dairy producers-corn growers have to start putting a "value to what you're growing, instead of thinking it's a 'bushel of corn' or a 'ton of silage,'" said Leland Miller, owner of Advanced Agronomics, an agronomic consulting firm located here

Miller, who spoke in mid-November to about a dozen Solanco Young Farmer Association members, outlined some advantages dent corn provides over the more popular flint varieties.

In a test conducted in France and published in a leading dairy science magazine, according to Miller, dent corn showed improved percent starch in dry matter compared to flint corn. It also showed marked improvement in other areas, including dry matter and percent starch digestibility

The dent corn exhibited a 30 percent improvement in starch use by the cow

Looking at how well the

Utterback To Speak At Decisions 2001 Conference

ALLENTOWN (Lehigh Co.) — Bob Utterback, ag marketing adviser for Farm Journal magazine, is the featured speaker at the Decisions For the Real Beginning of the 21st Century Seminar Jan. 23 here at the Days Inn and Conference Center.

Paul Knight, Pennsylvania State climatologist, instructor of meterology at Penn State University, and manager of the Weather Communications Group, will also talk. Paul has been the senior forecaster for The New York Times since 1986. Paul is also the producer, co-host, and on-camera meterologist for WPSX-TV's Weather World.

Dan Wolf, president of the Pennsylvania Master Corn Growers Association, will give his organization's perspective on public policy.

For information on the conference, contact John Berry at the Lehigh County Cooperative Extension office, (610) 391-9840.

Cut Flower Growers Gear Up For Spring Plantings

LOU ANN GOOD
Lancaster Farming Staff

HERSHEY (Dauphin Co.) — "I've been coming since 1950, and I figure I still get at least one good thing from each class," said Paul Harner.

Although 87 years old, Harner continues to plant and care for 3,000 perennials at Harner Farm, State College.

He and many other participants at last week's Mid-Atlantic Fruit and Vegetable Convention voiced their enthusiasm for the in-depth seminars offered during the three-day event.

"The hardest part is deciding which seminars to attend," a participant said of the hundreds of courses and activities on the schedule.

"As good as the classes are, we also learn so much from each other," Kathy King said of the impromptu conversations with other growers during mealtimes.

During a lunchtime break, King conversed with other cut-flower growers, including Morgan Maskewitz of Flinthill Flower Farm in Buckeystown, Md.; Bob Ambrose of Ridgeview Acres Farm, Stahlstown; Steward Mathias of Honey Crest Farm, Hummelstown; and a few others who came and went at the table.

"You can either learn the hard way or the accelerated way," King said of the benefit of the annual convention.

All growers have some devastating circumstances that forced them to learn things the hard way, but most mistakes can be avoided if you listen to the experience of other growers, Maskewitz said.

"One of the growers said that he raised two acres of flowers, but had no place to market them when in full bloom.

"If you have a perishable item, you'd better have a market," King said. She helps her husband Art and his brother Larry on their Harvest Valley Farms in Valencia.

Primarily a vegetable farm, the Kings are finding a rapidly expanding market in fresh cut flowers, which opens up a whole new venue. Customers want flower arrangements.

"I need to take a good flower arrangement course," King said.

Maskewitz never took a flower arranging course, but he's considered an expert in arrangements. He said that for years, he has been growing flowers, which he markets in the Washington D.C. area.

In recent years, he started arranging flowers because 75 percent of the customers want to buy flowers already arranged compared to about 20 percent who want to make their own arrangements.

Trained as an architect and in art, the background has helped him develop an eye for flower arrangement.

"It's called value-added, but you wouldn't believe, the problem I have at farmers' markets," he said. Other growers murmured their agreement because farmers' markets require all items to be homegrown, and a watchdog group is constantly worried that purchased flowers might be sneaked into the market. Plus, they frown upon the containers needed to hold the arrangements and other items sometimes incorporated into value-added products.

"During off season, being able to include shipped flowers would help," Maskewitz said of the eye appeal a variety of blooms offer.

A grower's time is largely consumed by educating customers on flowers and preserving them.

"Even retailers don't know how to use many varieties," Maskewitz said.

Designers are often searching for new varieties of cut flowers and often are eager to guarantee sales. However, if cut blooms are not properly conditioned, they will not last long.

"Properly conditioned flowers can last three weeks," Maskewitz said.

Depending on the variety, flowers are conditioned in different ways. Some require seared stems. Most need to be stuck in tepid water up to 100 degrees when first picked and then transferred to cool water.

Workshops at the convention can help growers determine proper care and save them many dollars lost through learning by trial and error.

Growers also discussed the best methods for drying flowers fast and easy while retaining color. While some have had success with the microwave and with silica jel, they agreed that the most economical and less labor-intensive method was hanging blooms upside down in a hot, dry, dark area.

Another problem faced by market-goers is the time required to set up and tear down displays. Most of the growers interviewed estimated set up and tear down time required 1½ hours each.

Despite the best laid plans, flower sales are largely dependent on weather.

"If it's a cool, dark day, people don't buy flowers," King said of market days. "But if it's bright sunny weather, everything goes."

"Even if its drooping," Maskewitz injected.

The most popular homegrown cut flower among most of the growers interviewed was lisanthus. Curly willow is also popular. It's prolific and fast-growing, which is both a positive and negative trait.

"After awhile you wish you didn't grow it," Maskewitz said of the plant's aggressive nature.

Ambrose and his wife Sally grow 200 varieties on two acres in Stahlstown. "Labor rules keep getting worse," Ambrose said of never-ending changes. Gone are the days when a housewife could fill in a few hours on occasion. "You need to withhold taxes if a person earns $150, or a crew $2,500."

Nasturtium seed germinates in 7-10 days. In addition to their beauty, the abundant blooms can be cut for use as an elegant entree garnish and the leaves add a tart flavor to fresh salads.

Robert Shaeffer of Dauphin County is retired from Penn State extension but attends the annual convention to renew his pesticide license for his home gardening hobby. More than 30 pesticide credits are available for convention-goers.

In addition to the workshops, Mathias considers the convention a boom for finding and buying new equipment at the convention's comprehensive trade show.

A beekeeper, Mathias looks for promotional materials to pick up and use in his Honey Crest Farm operation. He also raises cut flowers and two acres of broom corn for florists in his area. Although growers face frustration with florists who say they can purchase cut flowers cheaper from international markets, Mathias said, "We have a 48-hour advantage over shipped flowers. Fresher is important in our market."

Mathias also forces fruit blossoms from his orchard pruning. Springtime blooms of pear, cherry, apple, and peach are highly favored by florists. Mathias sells them in bunches of 10 stems, which florists use to insert with other flowers in arrangements.

To save a lot of headaches, Mathias believes growers should take the Capitol Area Beekeeping course offered through Penn State.

The annual convention is a joint effort of the State Horticultural Association of Pennsylvania, Pennsylvania Vegetable Growers Association, Maryland State Horticultural Society, New Jersey Horticultural Society, and Penn State, Rutgers, and University of Maryland Cooperative Extensions.

Bring Your Home To Life With Fresh Flowers

(NAPS) — Flowers are a growing trend in home decor. From carnations to roses, floral arrangements can be an inexpensive way to make a house feel more like a home.

The good news is decorating with flowers may be easier than you think. Whether you pick up a few stems at the florist, supermarket or corner stand, with a little budding creativity, you can add elegance and color to your house in no time. Try following these decorating tips to add a natural flair to your house with flowers:

• Use Creative Containers. A good rule of thumb is that if it can hold water, it can hold flowers. Old watering cans, cast iron kettles, antique coal holders and teapots can make great bases for doorstep, country kitchen or bath arrangements.

• Spruce Up And Cover Up. Flowers can be an elegant and creative way to hide your home's flaws. For example, a bouquet of flowers can be a colorful way to hide a water stain on table linens.

• Let Your Imagination Bloom. Collect an assortment of plain bottles and add a few colorful stems to each. Another idea is to float flower heads in bowls filled with water. Add floating candles for a bright and shining effect on the window ledge.

• Let Every Room Bloom. Try some flowers across the mantle or bookshelf in a den or an empty juice bottle filled with flowers in the kitchen or a cup of flowers in the bathroom to freshen up the room.

In addition, a few beautiful stems can add a soft and relaxing feel to the bedroom, or a bright and cheery look to your office.

Flowers can bring most any room alive with possibilities. For more creative decorating ideas visit www.flowerpossibilities.com.

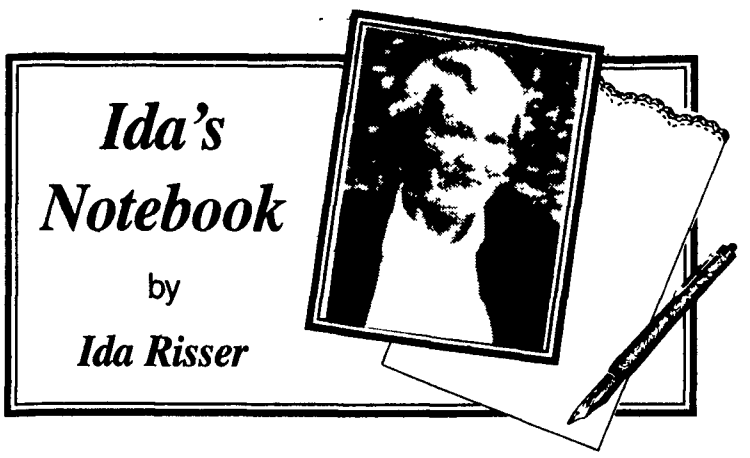
Salvias make great cut flowers. From spikey height to miniature bouquets, salvias add touches of color whether fresh or dried. Dahlias are another favorite with designers.

Home Gardeners' School Is March 10

DANVILLE (Montour Co.) — Penn State Cooperative Extension in cooperation with area garden clubs will present a home gardeners' school on Saturday, March 10 from 8:30 a.m. until 4 p.m. at Mifflinburg Area High School.

Participants include "Gardening with Native Plants," David Beattie, Penn State University; "Floral Design," Ed Auman, Rine's Flower Shop and Greenhouse; Selinsgrove; "The Aquatic Gardener," Jon Stauffer, Aquatic Gems, Dillsburg; "Plant Propagation," Earl Ferry, Selinsgrove H.S. Vocational Ag.; "Tree and Shrub Care," Jim Sellmer, Penn State University; "Container Gardening," Keith Phelps, Country Farm and Home, Mifflinburg; "Weed Free Gardens — Organically," Mark Guenther, Tait Farms, Port Matilda.

Registration fee is $20. This fee includes a box lunch and refreshments. Deadline for registration is Feb. 28. Registration forms are available at area garden centers or Mary Carbaugh, 161 Moser Road, Danville, PA 17821, Phone: (570) 275-7848.



Recently, I looked through an old record book that my great, great grandfather, Henry Shreiner, kept. He was a surveyor and a Justice of the Peace for 43 years in Manheim Township.

This book has over 100 names in it of people to whom he sold oak, hickory and ash wood. A cord of wood sold for two to five dollars in the 1840s. In the 1820s, he only charged one dollar per cord.

A cow was sold for eight dollars and a fat hog for the same price. Often bills were paid with a buffalo robe and straps or wagon whips. Two bushel of turnips went for 50 cents. Two corn brooms were 37½ cents and an ax handle was 12½ cents.

He surveyed land for 61 years into lots and laid out roads in northern Lancaster County. He also wrote wills and clerked at sales.

I was surprised to see that he drew up the conditions when my other great, great grandfather, Benjamin Landis, sold the Oregon Mill in 1850. When he traveled to Harrisburg to be a witness in court, he charged three cents a mile.

In 1835, he purchased a one-horse carriage from Thomas E. Franklin for $150. Another receipt found in the record book states that he had wool carded at a local mill. They wove a blanket for him for $4.36, and dyed a pair of stockings black for ten cents.

Among other papers was a recipe for "Sweeny" whatever that is. You were to mix one-ounce of balsom sulphur, one-ounce senica oil, and one-ounce of spirits of turpentine. Directions were "to be used the third, sixth, and ninth of each new moon."

It is interesting to read about things in the early 1800s, but I am sure that I would not have wanted to live during that period. Guess I appreciate modern conveniences too much.

Make A Spicy Valentine Treat

The warm and spicy aroma of cinnamon is with us throughout the year, with assorted associations from cinnamon and sugar on summer tomatoes, to the many apple preparations in autumn, and then on to mulling spices in December. As we enter February, we can carry that spicy warmth on to Valentine's Day as well.

Cinnamon was one of the first and oldest spices known to man. It grows on evergreen trees in the laurel genus. The two varieties that produce the best cinnamon are: Cinnamomum zeylanicum (Ceylon cinnamon) and Cinamomum laurii (cassia).

Ceylon cinnamon has a light tan color and delicate flavor. This is the cinnamon favored in Mexican cuisine. Cassia is harvested in Indonesia, China, and Vietnam, and produces a spice that is stronger in flavor and deeper in color. This is the flavor favored in the United States.

The part of the plant that gives us the spice, cinnamon, is the bark of the two trees mentioned above. If you think of the loose bark of some birth trees, you can make a comparison to the look of the C. zeylanicum and C. laurii. Harvest takes place during the rainy seasons. This aids by making the bark more manageable. Using a system of rotation and pruning, the bark is peeled from the trees and rolled into quills (cinnamon sticks). It is then dried and ready to be shipped.

The aroma and flavor we experience when we smell or taste cinnamon is based on its essential oil content. The primary essential oil that gives us the familiar flavorings is cinnamic aldehyde. Whether your spice is harvested from the C. zeylanicum or C. laurii (cassia) the essential oil is the same. The amount of the cinnamic aldehyde varies and therefore you will experience different strengths and flavor nuances accordingly.

Using the Mexican influence, the recipe combines chocolate, a native to the Americas, and cinnamon. So, on Valentine's Day or just a day to watch the snowfall, sit back and enjoy a cup of warm Mexican hot chocolate.

Super Chocolate Syrup

1 cup water
½ cup unsweetened Dutch process cocoa powder
1 cup dark brown sugar
1 teaspoon instant coffee granules
1 teaspoon cinnamon
1 teaspoon vanilla

Pour 1 cup of water into a small saucepan and whisk in the cocoa powder, sugar, instant coffee and cinnamon until dissolved. Bring the mixture just to a boil over medium heat, whisking, then remove from the heat. Stir in the vanilla. Cool to room temperature, then cover and refrigerate. Will keep indefinitely under refrigeration. Makes 1-½ cups.

To make Mexican hot cocoa: Stir 1 tablespoon of syrup into 6 ounces of hot milk. Top with whipped cream or marshmallow.

Valentine's Day And Roses

Roses are very popular around Valentine's Day. In fact, roses are one of the most popular flowering plants. And although you can't make outdoor rosebushes bloom in the middle of February-at least not in the East-you can plant a rose bush and enjoy its bloom in late spring and early summer.

To plant a rose, you need to pick out the perfect site. Roses need a space where they get at least six hours of direct sunlight each day. The more sun they get the happier they'll be. You can plant rosebushes from early spring until fall, but it's best to plant in the spring. This will give your rose time to establish a strong root system before winter.

Roses come in two forms, bare-root and potted. The bare-root roses are wrapped in burlap or plastic and should be soaked in a bucket of water for an hour before planting. The potted plants may be removed from the pots and put directly into your flower bed.

First, place the bush in a hole about 15 inches deep and 18 inches wide. Fill with soil and mound dirt around the canes of the plant to protect it from the weather. Give it enough water to wet the roots, and then sit back and watch it grow. You'll have your own beautiful roses soon!

Have a happy Valentine's Day!

Sensation Soups Workshop

LANCASTER (Lancaster Co.) — Learn soup making basics, quick soups, make-your-own mixes, tips, soups for gift giving, and safe food-handling practices at a workshop scheduled at the Farm and Home Center, Lancaster, Feb. 15, from 7 p.m.- 8 p.m., and repeated Feb. 16, 10 a.m.-11:30 a.m. Cost is $3, which covers materials and handouts.

Register by sending your name, complete address, phone number, and check made out to Agriculture Extension. Mail to Farm and Home Center, 1383 Arcadia Rd., Lancaster. For more information, call Nancy Wiker at the Penn State Cooperative Extension office (717) 394-6851.

Glucose Is A Great 'Brain Food'

If you've heard that eating something sugary in the morning was actually good for your brain, you probably heard of the importance of glucose, or blood sugar, and how vital it is to make sure your glucose level gets a kick-start in the morning.

You can do that and avoid heavy doses of sugar, which (sadly for your sweet tooth) nutritionists still don't recommend.

You can raise your blood glucose with just about any carbohydrate. Healthy breakfast choices such as a glass of juice or milk, a slice of toast or a piece of fruit will do just the trick. Notice none of these contains sucrose — the type of sugar we put in the sugar bowl.

Glucose is important for brain functioning for a very important reason: The brain, while making up only two percent of the body, uses about 25 percent of the body's glucose for energy. In fact, glucose supplies nearly 100 percent of the energy used by the brain. No other organ relies so heavily on blood sugar for energy.

Recent studies support the notion that eating breakfast can improve brain functioning. A British study in a 1998 issue of the "American Journal of Clinical Nutrition" showed that 33 university students improved their retention of new information if they ate breakfast or drank a high-glucose drink.

Another study, presented at the U.S. Department of Agriculture's Symposium on Breakfast and Learning in Children in 1999, showed that glucose improved short-term memory of both young adults and the elderly by about 40 percent. Even patients with Alzheimer's disease showed marked improvement in memory-related tasks after consuming a glucose drink.

It's not yet known exactly how the mechanism works, but some scientists believe that consuming carbohydrates can help quickly resupply specific areas of the brain with the energy they've used to work on a task. Whatever the reason, your mother was right again: Breakfast is the most important meal of the day.

Intimate Side Of MS

HARRISBURG (Dauphin Co.) — On Thursday, Feb. 15, MS Learn-on-Line, the National Multiple Sclerosis Society's monthly Internet educational program, will focus on "The Intimate Side of MS." A thoughtful discussion of sexual dysfunction, rehabilitation, and intimacy, Elizabeth McDonald, MD, Medical Director of the MS Society of Victoria, Australia, will present viewpoints on what these terms mean and how intimacy can be achieved. Dr. McDonald's live presentation will be followed by a question and answer session where participants can e-mail in their questions.

MS Learn-on-Line programs are presented live the third Thursday of every month. They can be viewed during the interactive sessions or from the archive on the National MS Society website, www.nationalmssociety.org. Free audio software, Media Player, can be easily downloaded from the website.

MS is a chronic disease of the central nervous system usually diagnosed during the early adult years. It's devastating because of its unpredictability; people with MS never know when attacks will strike, how long they'll last, or how severe they'll be. Since 1946, the National MS Society has supported more research and served more people with MS than any national voluntary MS organization in the world.

For more information on this or other programs of the National Multiple Sclerosis Society, call the Central PA Chapter of the National MS Society at 717-652-2108 or 1-800-227-2108.

You ask 'ou

This column is fo· readers who have questions but don't know who to ask for answers.

"You Ask—You Answer" is for non-cooking questions. When a reader sends in a question, it will be printed in the paper. Readers who know the answer are asked to respond by mailing the answer, which will then be printed in the paper.

Questions and Answers to this column should be addressed to You Ask—You Answer, Lancaster Farming, P.O. Box 609, Ephrata, PA 17522. Attention: Lou Ann Good.

Or, you may e-mail questions and answers to lgood.eph@lnpnews.com

Please clarify what question you are answering when responding.

Do not send a self-addressed, stamped envelope for a reply. If we receive the answer, we will publish it as soon as possible. Please include your phone number because we sometimes need to contact the person to clarify details. We will not publish your phone number unless you request it.

QUESTION — Ron Paronish wants to know where to find information on creating or planting a cornfield to resemble a corn maze.

QUESTION — Robert Lammers, Laurel Md., wants to know of someone who restores or sells parts for a 1940 Montgomery Ward wood cookstove.

QUESTION — John Rausch wants to know where to purchase Pepsodent firm bristle toothbrushes. Editor's Note: We weren't aware that these are hard to locate, but evidently are for John.

QUESTION — Donald K. Love, 1600 Walters Mill Rd., Somerset, wants to know where to locate wholesale sources for plastic or glass spice jars, homemade (licensed) baked goods, and old-fashioned Country Store merchandise and memorobilia such as shopping carts, store shelving, cash register, scales, slicers, grinders, bandsaws, produce supplies such as baskets, bins, and display equipment.

QUESTION — David Sensenig wants to know how other goat farmers handle kids that jump into the feeders.

QUESTION — Naomi Becker writes that she has a pair of emu's laying eggs and asked if any readers would be able to incubate them for her. She did not include a phone number or street address, only an e-mail address at nrbecker@juno.com.

QUESTION — Frank Heavner, Flinstone, Md., writes that his 92-year-old mother has a very bad memory but recently began to sing the following song. He and his siblings have never heard her sing it until recently. They think it might be a school song from her youth and are curious to know all the words to the song. Here are the words that she sings: "Said Washington to Betsy Ross, a flag our nation needs to lead us on to higher ground to high and noble deeds. Now can you make one for us and then she did reply, I am not certain that I can, but at least I'll gladly try. So she took some red for the blood they shed, some blue for loyalty....."

QUESTION A reader is looking for counted cross stitch patterns of the state birds, flowers and capitol buildings of each of the 50 states. The patterns previously appeared in Mary Maxim's Magazine, but are discontinued. Unfortunately the reader did not include her name and address so you will not be able to mail them to her unless she responds with her complete address. Notice to readers, if you need something mailed to you, or need to be contacted personally, you must include your complete address. However, we want answers to appear in this column as much as possible. Many other readers are also interested in the answers. If it is information requested, we do not print full addresses as this can be handled through this column.

QUESTION — Kim, from Hancock, New York, needs a load of sawdust. If you know a source, please e-mail her wildbill@dmcom.net.

QUESTION — Margaret Diamond, 43 Newbury Dr., Southampton, N.J., would like the patterns for "Boxabilities," offered from H&G TV about 1996.

QUESTION — Yvonne Lauchman, East Berlin, wants to know if anyone has and would be willing to sell a Hershey's Chocolate No. 3 Vintage Edition Tin, which sold with Hershey's chocolate bars inside sometime between 1992-1995. The company no longer sells that particular tin box. Call Yvonne at (717) 259 9471.

QUESTION — Kattileen Filler, 1839 Skibo Rd., Bethlehem, PA 18015, has 1,000 cooking magazines for sale. Included are "Bon Appetit," "Chocolatier," "Cuisine," "Food & Wine," "Gourmet," etc. Make an offer.

QUESTION — J. Doherty, Needmore, wants instructions to make a baling twine wreath.

QUESTION — Ruth Ann Loose, Altoona, is looking for the following Hall's china pieces to complete her collection: Rose Parade, 3 cup teapot and 6-inch five-banded bowl; Royal Rose: 6", 7½", and 9" straight-sided bowls, custard cups, and Aladdin teapot. Rose White, 3 cup teapot, French fluted baker, 6", 7½", and 8½" thick-rim bowls, custard cups, and 9" salad bowl. Call (814) 684-1551.

QUESTION — A reader wants to know of a supplier for plastic rings to put on chicken feet to distinguish old chickens (2 years old) from one-year-olds when combined in the same room to conserve space. She also wants to know what causes some chickens to continue plucking feathers from other chickens. Is it a deficiency in the feed, and if so, what should be added to chicken mash made from homegrown grains?

QUESTION — A reader wants to know of a supplier for skillets made with cast aluminum or other metal (not cast iron) that has dividers to heat at least three different items on the stove at the same time. Lehmans' of Ohio has only cast iron skillets.

QUESTION — A reader wants the words to a song, which was popular in the 1960s and includes the words, "Sing, Sing, Sing, Sing a happy song and you will soon be forgetting that anything is wrong...."

QUESTION — John Weaver, Boiling Springs, would like to know of a home gardener in Cumberland County or surrounding area who could hull sunflower seeds.

QUESTION — Dianne Decker, Shippensburg, wants to know where to purchase lady mannequin legs. The legs must be straight and from the knee down. Used ones will serve the purpose.

QUESTION — Mrs. Paul Zeager, Danville, wants to know where to find "musterole," a salve used for sore throats, etc., and the price required.

QUESTION — Samuel Zook is looking for a good used Pfaff sewing machine in the 700, 800, or 900 models. Send price and condition to him at 592 White Oak Rd., Christiana, PA 17509.

QUESTION — Ray Engblom, 33 Whiskey Mill Rd., Clarksboro, N.J. wants the address of "The Ohio Store," located in Lancaster. He understands they deal in kerosene lamps, parts, globes, and chimneys.

QUESTION — Alma Trego, 1246 Division Hwy., Ephrata, PA 17522, would like to know where to find a copy of "God Healed Me," by Robert Baker published in 1968 by Choice Books.

QUESTION — Cindy Eshleman, Jonestown, wants to know if anyone is willing to sell an unopened tin — a 2000 tin from Target that pictures a snowman on front with the words, "minty chocolate." Call her at (717) 865-2589.

QUESTION — Rose Diehl, Bloomsburg, is looking for 8¼-inch cookstove lids. She also needs parts for a Welcome Glode Cookstove made in Pa. Call her at (570) 356-2511.

QUESTION — Evelyn Goss, Conestoga, wants the ingredients and instructions for making the mothball centerpiece in which the mothballs bounce. In the past, we printed some of these instructions. Some old recipes no longer work because the ingredients in mothballs have been changed to comply with FDA standards. I believe it is necessary to buy a chemical from the drug store to make the mothballs bounce, but I don't recall the name of the ingredient. If anyone has complete instructions for making one that works, please send it.

QUESTION — Samuel Stoltzfus, Christiana, writes that a barn built in Millersville in 1830, has a stone among other stones that is laid rather flat and sticks out 12-15-inches and is approximately 5 feet off the ground. Stoltzfus wants to know the purpose of this stone.

QUESTION — Amos S. Kauffman, 1860 Cambridge Rd., Honey Brook, wants an old-fashioned carom board to use in a school. Should be in good shape.

QUESTION — Agnes Skeba, Monroe Township, N.J., wants to know where to purchase an old French Provincial love seat that has a wooden frame that shows. Is interested, no matter what the condition. Call her at (609) 448-0800.

QUESTION — Tom Clowney, 361 Barlow Rd., Gettysburg, PA 17325, wants to purchase an antique wooden cow stanchion.

QUESTION — Ben Kimsinger, Meyersdale, inquires if anyone remembers that some Farmall Cubs had a one-arm high lift in the 1950s. Where could he find one? Anyone know of an upcoming sale for his collection? Bob Stockdale, Macungie, writes that this is not an answer but some information for Ben. The loader he mentions is a No. 1000 international model. The Cub, with its 12-inch front wheels, is really too light for this loader. It also fits (with no changes or other parts) on the Super A where it is a very useful and trouble-free loader that can lift about 600 pounds. It would be OK on the Cub for very light use or as a collector item. Stockdale writes that he has seen a few of these advertised in the Mailbox/Classified Ads of this paper during the past 10 years. Check out these ads or items, although it may take awhile until it can be located.

QUESTION — Scott Bordner has a two-wheel standard Monarch walk behind cultivator. He would like sales literature, operating manual, original colors, and other information that will assist him in restoring the cultivator.

QUESTION — Bea Minamot, 10141 River Landing Rd., Denton, MD 21629, has a ¾-inch solid maple rope bed for sale at $800. The bed features spiral-turned sides and a pretty headboard. All pegs are intact.

QUESTION — Marion Capp, Mechanicsburg, wants to know where to locate an erector set for her grandson.

QUESTION — Charlie Gallagher wants to know where to get a throat chuck and screw on head for a Toledo Chopper 32 electric meat grinder. The threads on his are worn and keep popping off.

QUESTION — Bill Angert, Manheim, wants a Stanley 77 handcranked dowel and rod turning machine. The hand crank attached to a speed gear, turns a cutter and a round dowel is created as you push a square stick of wood into it. It has 8 or 9 different cutter heads. Call him at (717) 665-5152.

QUESTION — Jean Patches would like information on who designed the Hershey quilt and the story behind the quilt pattern.

QUESTION — A reader is looking for a magazine called "Closeout News" or "Closeout Letter." Scott writes that the publication lists odd lot and overrun merchandise available.

QUESTION — D. Weaver, 395 N. Railroad Ave., New Holland, PA 17557, wants to purchase a copy of the Golden Book, "The Huffin Puff Express," copyrighted in 1974.

QUESTION — William Dereaney, 128 Primrose Rd., McDonald, wants to know where he can get waterproof glue that can be used for bee boxes and that withstand weather conditions.

QUESTION — M. David Watts, Geigertown, wants to know of a supplier for Revival Hemorrhoid Salve.

ANSWER — John Weaver, Boiling Springs, wanted to know where to purchase bull blinders. Alvin writes that blinders are available from Martin's Harness Shop, 7034 Amstutz Rd., Shiloh, Ohio 44878. Call (419) 896-2872.

Elam G. Blank, 105 Windy Top Rd., Christiana, PA 17509 has a used pair to sell for $40, which cost $90 for a new set.

ANSWER — Joanne Passmore writes that she received several answers to her request for having carpet rags woven into rugs. For several readers who wrote that they will do it, here are their addresses in case other readers want to use their services. Mrs. Moses F. Stoltzfus, 39 Pequea Valley Rd., Kinzer, PA 17535. Arlene Stauffer, P.O. Box 115, 27990 Point Lookout Rd., Loveville, MD 20656.

Safety First When Using Portable Heaters

NEWARK, Del. — You don't need to be a meteorologist to know that this winter has been cold, and there's more chilly weather to come. Meanwhile, home heating costs are escalating with no relief in sight.

Colder temperatures plus higher heating bills can lead to increased dependence on portable space heaters as a way to keep warm at home, according to Ron Jester, Cooperative Extension safety specialist at the University of Delaware. Supplemental heaters are great for keeping the chills away, says Jester, as long as users don't take safety for granted.

"Any auxiliary home heating equipment increases the possibility of fire and other risks," Jester warns. "Problems typically stem from lack of consumer awareness of safety and operational guidelines.

Portable heaters, says Jester, are usually either powered by household electric current or fuel-burning, using kerosene or propane gas. For all types of heaters, he advises, choose only those that have been approved by an independent testing lab such as Underwriters Laboratories Inc. (UL)." Appliances that meet test standards are clearly labeled," he says.

"Read all the manufacturer's instructions before operating the unit," Jester adds, "including the fine print. Pay attention to warning labels, too, and be aware of warranty information."

Never use a heater to dry wet clothing, and keep kids and pets a safe distance away, he continues. Choose heater location carefully — away from high traffic areas, (exits) and combustible materials such as walls, furniture, curtains or papers.

Don't use electric heaters in wet or damp areas. Keep them away from sinks, tubs and places where moisture can collect," Jester cautions. "And don't overload electrical outlets; keep the heater on a dedicated circuit. Always unplug the unit when it's not in use. Check the cord occasionally — beware of a hot cord. Don't connect to an extension cord."

An important safety practice when using propane and kerosene-burning heaters, says Jester, is to ensure adequate ventilation, even if it means cracking a window open.

"Fuel requires oxygen to burn, and letting fresh air in prevents buildup of harmful gases as room oxygen is depleted," he says. "Also, use the proper type of fuel for the heater, only those recommended by the manufacturer. Keeping fuels in properly identified storage containers will help eliminate such as mishap. Refuel kerosene heaters outdoors in a well-ventilated area, only after allowing the unit to cool down. And never, ever refuel a kerosene heater with gasoline."

Carbon monoxide is always a danger from fuel-burning heaters. An odorless, tasteless toxic gas, carbon monoxide can build up in poorly maintained appliances, reaching unsafe levels quickly.

"Install carbon monoxide detectors along with your smoke detectors. You need both types of detectors to give enough time to evacuate your home in case of emergencies," Jester advises. "Don't forget that preparation for emergencies also includes practicing exit drills in the home."

"Using common sense when using supplemental heaters can make this a warm, comfortable and above all, a safe winter," he asserts.

Jester offers a checklist for the safe use of portable space heaters:

- Purchase only heaters that have tested in independent labs.
- Look for heaters with automatic shut-off features.
- Install smoke and carbon monoxide detectors on each floor level and outside bedrooms.
- Keep portable heaters out of the way of family traffic and combustible materials.
- Never use electric heaters in kitchen, bath or laundry areas.
- Use only recommended fuels or proper electrical outlets.
- Always turn heaters off when you leave the house or go to bed.
- Follow all manufacturer's directions for safe operation.
- Provide fresh air for gas or kerosene-burning heaters keep a window open ½ to one-inch per heater.
- If you suspect any problems, turn the heater off and call a reputable repair service.

To receive more information about space heater safety or other safety information, call you county Extension office.

Bagged Salad To Transform Meal Preparation

SAN ANTONIO, Texas — In the same way that fresh-cut salads revolutionized the lettuce industry, Farmland National Beef introduces a new product that will dramatically change meal preparation and create a new market for the ground beef industry. The National Cattlemen's Beef Association Annual Convention, Farmland National Beef introduced Farmland Ground and Browned™ Fully Cooked Seasoned Beef, a fresh beef product that will be available in grocers' meat departments. National rollout of the product will begin in select markets in April.

Available in three flavors — original, Mexican, and Italian — "Ground and Browned" is fully cooked, which means less time spent over a hot skillet and no greasy mess to dispose of either. It's ready to microwave and eat, or add to a favorite recipe, reducing preparation time for many meals.

"Our research has consistently shown that consumers want simple meal solutions," said David Hall, senior vice president of sales and marketing, Farmland National Beef. "At the same time, we know our customers want to maintain that tender and juicy homemade flavor of fresh ground beef. "Farmland Ground and Browned" does both. It's convenient and it offers the same delicious flavors our customers love."

"Ground and Browned" joins a wide range of Farmland National Beef's branded beef products to give consumers another value-added, timesaving option. Convenience foods have significantly altered consumers food preparation habits and created new, high-value markets for commodity items. Consider, for example, bagged salad mixes. Over the past decade, sales of these ready-made products have increased dramatically — from about $82 million in 1989 to a whopping $1.7 billion in the year 2000.

Based on two years of extensive research, Farmland National Beef expects similar results from "Ground and Browned" fully cooked seasoned beef products. Last year nearly five billion pounds of ground beef was sold at retail. Nearly 80 percent of test consumers indicated they would definitely or probably purchase "Farmland Ground and Browned" in the future. Convenience played heavily into that decision; 82 percent of test consumers cited convenience as a top motivator for purchasing "Ground and Browned."

"Farmland Ground and Browned" is sold in the fresh meat case, is made from real ground beef; no filler products are used. USDA inspected and approved, Farmland National Beef's latest product line offers the quality consumers associate with the Farmland name.

"Ground and Browned" will be marketed in a 12-ounce package, equivalent to one pound of uncooked ground beef. The resealable package allows consumers to use as much or as little of the beef as they choose, while retaining the original flavor and freshness. Suggested retail price is $3.49.

4-H HAPPENINGS

15th Annual 4-H Sausage Sale

Cambria County 4-H Club members and leaders are conducting their 15th annual sausage sale, which benefits youth programming/4-H in Cambria County and is sponsored by the Cambria County 4-H Program Advisory committee.

Like last year, lean ground beef also will be offered for sale.

Cambria County 4-H members and leaders will be taking orders on loose and casing sausage, kielbassa, and hamburger patties until Feb. 23. The 4-H members and leaders will deliver orders on Saturday, March 3.

All meat is packed in two-pound packages. Sausage can be purchased as either regular or hot, loose or casing, and costs $5 per package. The hamburger patties are ¼ pound, eight per package, and are $5 per package. The kielbassa is packaged in two pound packages for $5. The goal of the 4-H'ers is to sell 4,000 pounds of meat.

For more information on Cambria County 4-H, contact the Cambria County Extension Office, (814) 472-7986.

Centre County 4-H

Centre County 4-H Beef Club met Tuesday, Jan. 16 at Logan Grange Hall, Pleasant Gap.

2001 Guidelines, enrollment books, and a 4-H steer reference guide were handed out to the members. Six new members were introduced.

Officers elected for the year 2001 are president: Samuel Peters, vice president: Devon Warner, secretary: Toni Capparelle, assistant secretary: Ryan Knepp, recreation leaders: Erin Knepp and Luke Harding, historian: Jacob Gates, news reporter: Jayson Harpster, and county council representative: Tammi Deibler.

The Centre County 4-H Beef Club will continue to meet every third Tuesday of the month throughout the rest of the year.

Conodoguinet 4-H Sheep Club

The Conodoguinet 4-H Sheep Club met Jan. 18 at 7:30 p.m. at the extension office.

Under old business, a report was given on the 4-H achievement banquet. Jake Zeigler was named outstanding secretary, John Witter was named outstanding treasurer, Jeanette Bouch was honorable mention in news report, and the club was third in the Clover Award.

A report was given on the livestock banquet. Several members gave reports on taking lambs to area places for the nativity scene. Sonya Rinker gave a report on the Farm Show. Books and pins were handed out to the members.

Under new business, two new club members, Mike and Jennifer Garman, were introduced. Ethel Myers let everyone know that there will be a cookie sale. The extension office will send out details in a couple of weeks.

Elections were held for the coming year: Sonya Rinker — president; Austin Durf — vice president; Jeanette Bouch — secretary; Jake Zeigler — treasurer; Mark Myers — social chairperson; and Mike Garman — news reporter.

The next meeting will be Feb. 15, 2001, at the home of Mark Myers.

4-H Day Camp

The Washington County Chapter of the Penn State Cooperative Extension Service has been awarded a $1,200 state grant from the Agriculture and Rural Youth Organization Program.

The grant was announced by state Reps. Peter J. Daley, Victor J. Lescovitz, Tim Solobay and Leo J. Trich Jr., all D-Washington.

"This money will be used to develop a new program for 4-H Day Camp called '4-H Goes Wild With Wildlife' that later will be used as a traveling education program kit by leaders and members of the 39 4-H clubs in Washington County," Daley said.

The two-day camp will be in July.

Lescovitz is encouraged by the program's subject matter.

"I am very pleased to see a program created to educate young people about Pennsylvania's endangered wildlife," Lescovitz said. "It is unfortunate such animals as the Bald Eagle and Short-Eared Owl are endangered here in our state. However, educating area youth about these creatures is a proactive step toward their long-term preservation."

The money benefits an already successful local organization, according to Trich.

"It was encouraging to see that the Washington County Chapter was honored. Our cooperative extension office has continually done an outstanding job. I am glad they are being recognized," he said.

"Although agriculture is Pennsylvania's most lucrative industry, our youth are our most important resource," Solobay said. "It's important that the youth of our area know all the options they have in the agricultural field, and 4-H clubs give them the opportunity to learn about those options."

Youth Turkey Hunting Safety Workshop

The Berks County 4-H program is sponsoring a Youth Turkey Hunting Safety Workshop during the Hamburg Sports and Outdoors Show Feb. 17 from 1 p.m.-3 p.m.

Instructor Steve Werley 4-H volunteer, will cover calling techniques, scouting, safety, and habitat. It is open to all Berks County youth, ages 11-17.

Parents are encouraged to accompany their children. The workshop is free, but you must pay admission to the show.

The workshop is limited to 40 participants and you can preregister by calling the 4-H office at (610) 378-1327. Handouts and door prizes will be given to all participants. If room is available, you can check in at the show.

North Mountain Market Goat Club

The club's first meeting is at 3 p.m. at the Dresch farm, Kenbrook Road, Lebanon.

The first meeting is at Doug and Nancy Dresch's farm Saturday, Feb. 24, at 9 a.m.-11 a.m. The meetings will be held in the goat barn. Please dress accordingly.

The club plans to conduct meetings every other Saturday morning from 9 a.m.-11 a.m. At the meetings, members will review feeding, grooming, health care, preparing for the 4-H Fair, any up-and-coming events, club requirements, etc. We will also answer any questions the members or their parents may have. If we do not have the answer, we will find them out for you.

Cumberland County Wide 4-H Dairy Club

The last meeting of the Cumberland County Wide 4-H Dairy Club was Dec. 11.

Under old business, a county council report was given. The council met to discuss the Farm Show. They decided that the club will set up a booth to encourage people to join 4-H. The Christmas Giving Committee gave a report. They said that the names were chosen, and they just had to set up the date.

Under new business, Mrs. Walton gave judging information for Donald Harwood. Judging practices will begin in January. The Farm Show was also talked about, reminding people of the rules and check in times.

The club was given a flag set from Speak Out Night. They also donated $25 to the Warm A Child Fund.

Brandon Kendrick gave a demonstration on how to make homemade ice cream. Mariah Paynter gave a demonstration about Texas.

In January, Pennsylvania has its annual Farm Show. Many club members showed there and did well.

Tack Swap

The annual tack swap at the Northampton County 4-H Center will be Saturday, April 21, from 11 a.m.-2 p.m.

The Northampton County 4-H Center is located on Bushkill Center Road, Nazareth. The tack swap is open to anyone who wishes to come to sell or to buy a wide variety of horse related items, apparel, and tack. All sellers must have a table area, — no consignment items will be sold at the tack swap.

Sale areas will be offered to the public at a cost of $15 per table for the indoor area, $12 per table for the pole barn area, and $10 per "area" in the outdoor arena, weather permitting. Anyone wishing to sell during the tack swap must preregister for spaces in the indoor and pole barn areas; outdoor areas will be allocated on the day of the event.

Any item from small to large may be sold. No live animals or food will be allowed to be sold at this event. Persons with large equipment to sell are welcome to display on the open grounds for the registration fee.

Anyone wishing further information, directions, or registration for this event may call (610) 837-7294.

Spinnin' Spurs 4-H Horse Club

Spinnin' Spurs 4-H Horse Club ended its 2000 4-H year with a trip to the 5th Annual Horse World Expo in Timonium, Maryland on Jan. 20.

The Expo featured equine exhibits and demonstrations by top horsemen and trainers such as Pat Parelli, John Lyons, and many others. The highlight of the evening was a program featuring world class and Olympic riders Alison Firestone, Beezie Madden, Karen O'Connor, David O'Connor, and Philip Dutton.

The club will begin its new year with officers as follows: Callahan Schillaci, president, Brooke Reist, vice president, Whitney Rehm, Secretary, Hillary Grube, treasurer, and Emily Riden and Anne Whitely, news reporters.

The first meeting of the new club year will be the Brunnerville Fire Hall. Anyone interested may attend. The club does not provide horses for club activities, but there are plenty of opportunities for "horseless" members. For more information, call Karen at (717) 665-3222 or Cindy at (717) 733-4178.

Carbon Monoxide In Homes And Workshops

RUTGERS, N.J. — Carbon monoxide (CO) is a toxic gas produced when any carbon-based fuel is burned. It is colorless and odorless; therefore, you may not be aware of its presence. Carbon monoxide can collect in enclosed spaced (including homes, offices, and workshops) without the awareness of the occupants.

According to the National Safety Council and the Centers for Disease control, approximately 500 to 1,000 people are killed in the home each year by CO. Nearly 5,000 people in the United States are treated in emergency rooms for carbon monoxide poisoning. It is believed that many other people are made ill by exposure to elevated CO levels but are either misdiagnosed or untreated.

Sources

Most carbon monoxide produced in homes comes from combustion of fuel for heating and cooking. Carbon monoxide may accumulate in the home when a blocked chimney, broken chimney flue, or damaged furnace heat exchanges allows gases to enter the home. It can also enter the home from the garage when an automobile, lawn mower, or other engine is in operation. Backdrafting chimneys and flues (common when ventilation fans are used in tightly sealed homes) may allow combustion gases, including carbon monoxide, to enter the home.

Gas stoves and ranges can produce CO, which can present problems if the appliances are used for prolonged periods or if they are not operated properly. Gas ranges are not intended to be used to heat the home. Some other common sources of carbon monoxide include unvented fuel-burning space heaters and indoor use of charcoal for heating or cooking. Charcoal should never be burned indoors.

Symptoms

Carbon monoxide bonds to hemoglobin in red blood cells, interfering with the capacity of the hemoglobin to transport oxygen throughout the body. Common symptoms of CO poisoning include nausea, dizziness, weakness, muscle aches, vomiting, and a general weakness or sleepiness.

Because the symptoms may resemble the "flu" or food poisoning, carbon monoxide exposure may be mistaken for these common illnesses. Carbon monoxide usually affects all occupants of a household at the same time (which may help distinguish carbon monoxide poisoning from the flu). Higher dosages of CO can cause impaired judgment, confusion, paralysis, coma, and death.

Victims of CO poisoning must be removed from exposure as quickly as possible. They require prompt medical attention. Symptoms may not disappear immediately after the victim is removed from exposure to the gas; in some cases, symptoms may recur days or weeks later.

Protection

Regular inspection and maintenance of all fuel-burning appliances (stoves, furnaces, water heaters, dryers, etc.) should be conducted by a qualified technician. Metal flues and heat exchangers should be inspected for signs of rusting and cracking. Follow recommendations in owners' manuals to ensure proper use of all appliances. Gas ranges, ovens, and clothes dryers are not intended to be used to heat the home.

Do not use "outdoor" appliances (such as barbecue grills or construction space heaters) indoors. Garages and workshops are "indoors" — they are enclosed spaces in which combustion gases may accumulate.

Carbon monoxide detectors carrying the Underwriters Laboratories (UL) listing are recommended. Carbon monoxide detectors meeting UL standard 2034 can detect long-term, high-level CO concentrations and short-term, low-level CO concentrations. Carbon monoxide detectors should be installed on a wall or ceiling near a sleeping area.

Gartley Promoted To Director Of UD Soil Lab

NEWARK, Del. — Karen L. Gartley has been promoted to the position of director of the Soil Testing Laboratory at the University of Delaware (UD). She replaces Dr. J. Thomas Sims, who will concentrate on nutrient management issues for Delaware.

Program coordinator for soil testing at the UD for the past eight years, Gartley oversees all laboratory operations, including testing procedures and fertilizer recommendations for farmers, homeowners, and landscapers. Gartley provides analytical support and research-based interpretations of soil analyses to university and state scientists.

Recognized in the soil testing community as an expert on soil testing and nutrient management, Gartley serves on the national board of directors of the Soil and Plant Analysis Council and is a representative to the National Proficiency Testing Program for soil testing and plant analysis laboratories. She also acted as a regional and national liaison to other analytical laboratories by participating on committees for the Soil and Plant Analysis Council and the Northeast Coordination Committee on Soil Testing.

Gartley received bachelor degrees in bioresources engineering and plant science in 1987 from the University of Delaware. In 1992, she received a master's degree in soil chemistry, also from UD.

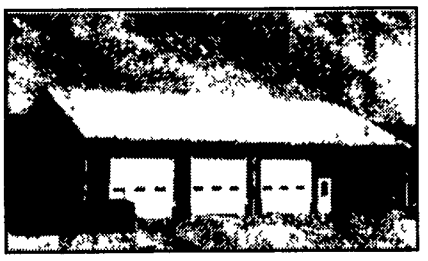
Use on Barns Or Garages



Light Commercial.

Reroof w/Metal

ADVANTAGES:

New Construction

- Roof can last for 100 years - cost efficient
- Can be installed over existing roof (Asphalt, roll roofing, wood shingles)
- Is environmentally safe
- Beauty - colorful (galvanized, 40 lb. terne, terne-coated stainless, and painted steel in over 20 different colors.)
- Can be installed on flat roof with as little as 1/2" pitch per foot.
- Good for homes, farm buildings, garages, commercial buildings.
- Sheet in continuous length installed with concealed fasteners with double lock seam for water tight application.

PUBLIC AUCTION
of
87.37 Acre
Valuable Farm Real Estate
SAT., MARCH 3, 2001
@ 1:00 PM
Location: 9 Shuman Road, Newburg, (Hopewell Twp.), Cumberland County, PA
***Directions:** From Blue Mountain Exchange (PA Turnpike) go East on Route 997 Approx. 3 miles to Auction.*
This property is to be offered in three tracts and/or as a whole tract of 87.37 acres more or less. Tract #1 is approx. 25.57 acres with road frontage, and stream. This tract is ideal for a horse farmette, Estate location, etc., good drainage & elevation level to gentle slope. Present usage is cropland.
Tract #2 is approx. 7.4 acres and has a very early log home with siding and new furnace 2 years ago. There is water and septic system. The log home needs renovation and or it could be moved to another site if you so desire. There is also an old cornbarn garage/workshop with some work needed. This tract is situate to the immediate north of Rt. 997 and also has frontage on Shuman Road.
Tract #3 is approx. 54.4 acres and has a bank barn with box stalls, milkhouse, chicken house or workshop, implement pole shed, and a 40' by 80' m/l 1 floor hog, sheep, chicken, or most any farm usage potential. This tract also has approx. 5 acres of woodland and is presently cropland. This would be ideal for an executive estate location and or horse farm. Fields are level to gentle slope to the south.
Terms of Auction $15,000 down on each tract or $40,000 for entire tract if sold as 1 parcel day of Auction Down payment MUST BE CERTIFIED FUNDS PAYABLE TO. Sanford G. Leaman, Escrow Acct Settlement on or before April 10, 2001.

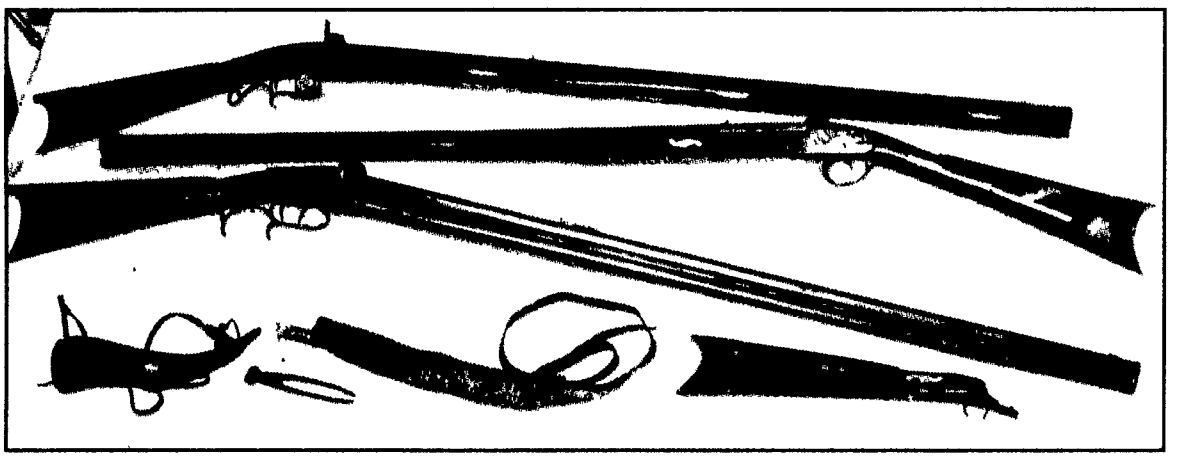
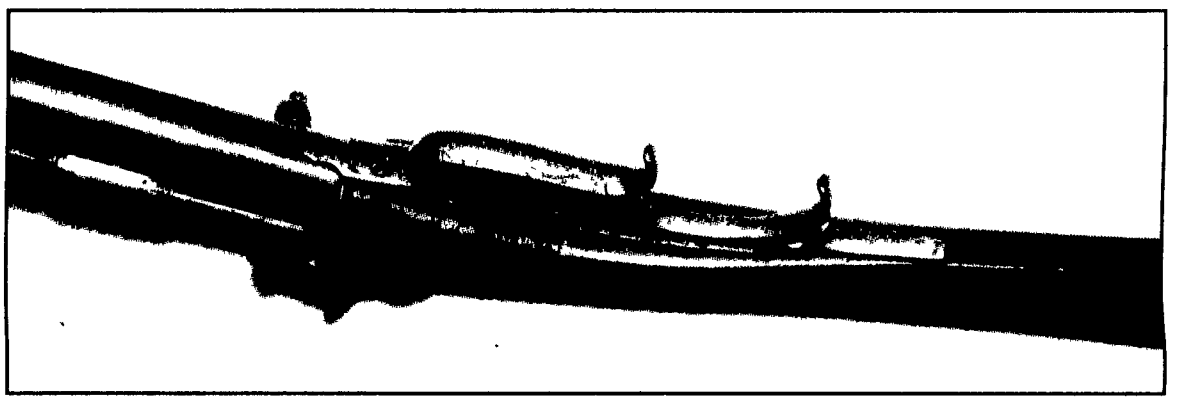
Antique Collector Preserves Family's Gunsmithing History

This picture shows Jacob F. Gehrett standing between his gun shop and house in Orbisonia. The house is still in use today.



The top rifle, made by Jacob Gehrett, features 11 inlays and an earlier style of patchbox. The middle shotgun or fowling gun has a tulip inlay at the right. The third gun is a rifle/shotgun combination. Left to right at the bottom shows a powder horn that once belonged to James B. Doyle, a bullet mold, a bullet pouch, and a butt of a rifle with an early patchbox.



Early gunsmiths took time to decorate their guns with inlays and engravings. This shows a patchbox on the butt of a rifle made by Jacob F. Gehrett. Brass patchboxes stored pieces of cloth and animal fat to lubricate the ball.

GAIL STROCK
Mifflin Co. Correspondent

ORBISONIA (Huntingdon Co.) — Guns made in the mid-1800s by Jacob F. Gehrett of Orbisonia, Huntingdon County have a reputation.

The book, "The Kentucky Rifle and Me," by Edith G. Cooper includes this description about Gehrett's handiwork: "Many fine guns were produced by this maker both plain and highly decorated, and his guns were also known for their excellent shooting qualities."

Several years ago, when Jacob's great-great grandson, someone we'll call J.B., had the chance to buy one of his great-great grandfather's rifles, he didn't think twice.

"I bought this from Robert Doyle formerly of Shirleysburg. Doyle's great grandfather had bought it directly from Jacob Gehrett," J.B. explains. "It was still being used in the early 1930s to hunt turkey and butcher hogs."

The history of Gehrett gunsmithing spans three generations earlier. Jacob's grandfather, Samuel Gehrett (1789-1854) began making guns in Haines Township, Centre County, while apprenticing under Zachariah Albright. Gehrett moved to Huntingdon County, and his son, John (1806-1896), continued the trade in the town of Cassville. John's sons, Jacob (1836-1908) and James (1832-1914), also built guns, James in Smithfield, and Jacob in Orbisonia around 1860.

Jacob served in the Civil War in the 110th Pennsylvania regiment and returned home to resume his trade. Records show that almost 60 gunsmiths lived and worked in Huntingdon County from the 1700s through the late 1800s.

According to J.B., Jacob and James made rifles during the late percussion period from the 1850s through the 1880s. Before the 1820s, gunsmiths made flintlock rifles.

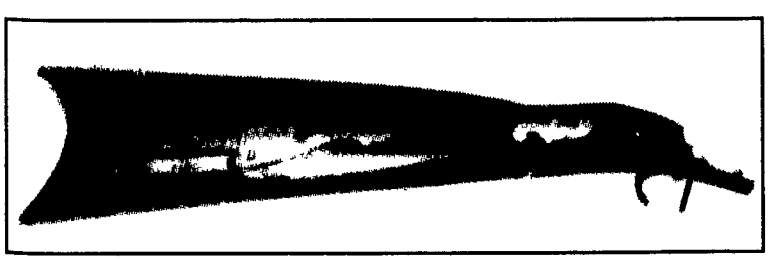
The Jacob F. Gehrett gun (c. 1860), which J.B. owns, features an engraved inlay star made of silver with high nickel content on one side of the butt and a pear-shaped brass patchbox, which stored cloth and animal fat used to lubricate balls, on the other.

The gun's shape and characteristics follow historical records of the type of guns commonly made in Huntingdon County. James B. Whisker has this to say about guns made in Huntingdon County in his book, "Arms Makers of Pennsylvania:" "Stocks are slim, notably at the butt end, often making the commercial percussion locks look disproportionately large."

Another book, "Behold the Longrifle," by Roy Chandler and James Whisker, shows a photo of one of Jacob's father John's guns, an over and under with a rifle on top and shotgun on the bottom. It was built around the 1840s and features a silver tulip pattern inlay.

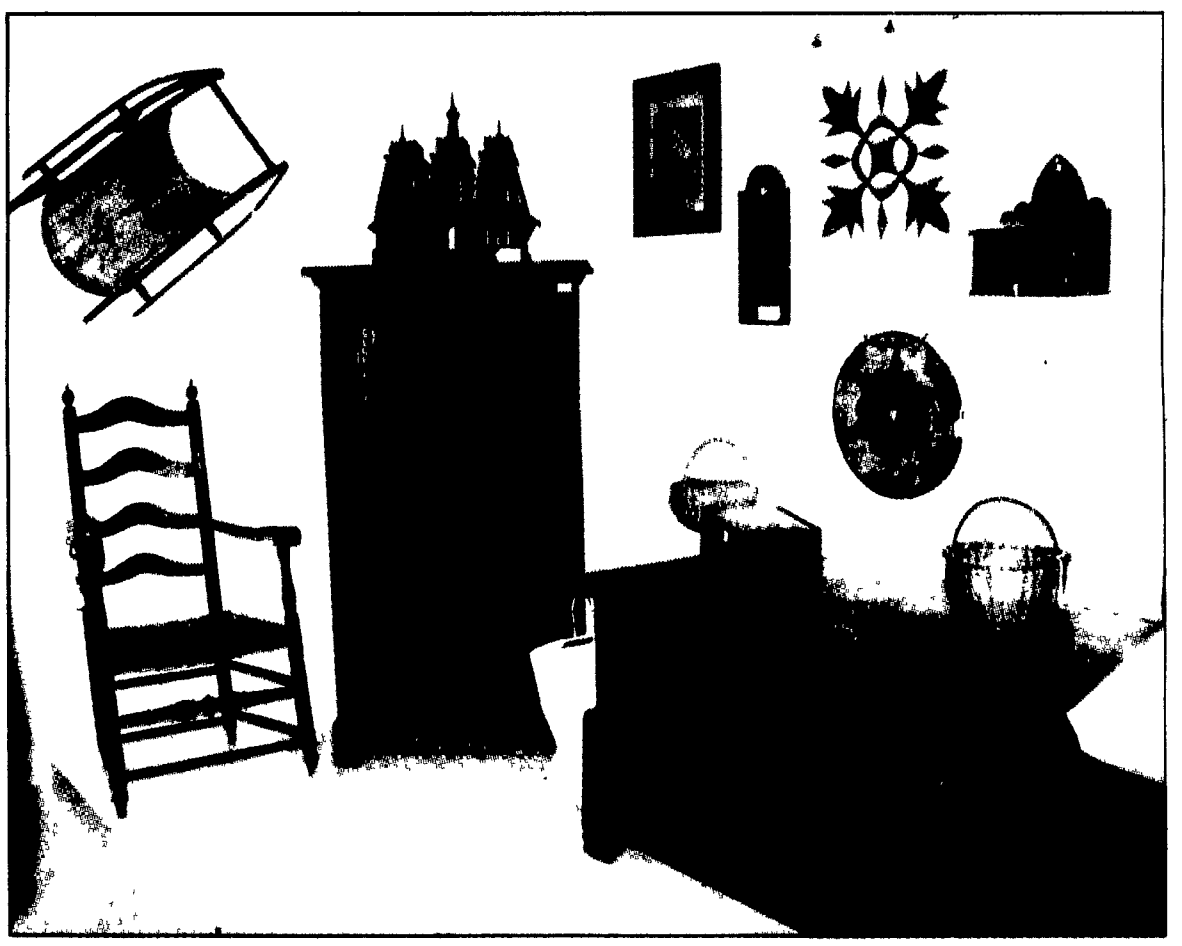
"I never saw any guns made by Samuel other than in a photo, but they're around," J.B. comments. "One sold 10 years ago for $14,000."

In 1971, J.B. visited Orbisonia for the first time. He and his parents took his grandmother to visit her aunt — Jacob Gehrett's daughter, who was living in Jacob's house. J.B. pulls out an old photograph of Jacob Gehrett standing between that house and his gun shop next door. The gun shop is gone, but the house still remains as does the guns and history of the Gehrett gunsmiths through their great-great grandson.



Engraving on the brass trigger guard became part of the art of gunsmithing.

Antiques Show Features 18th-19th Century Treasures



If you need a sled for this winter's snow, here is a cherished one displayed by Steve Smoot at the York Antiques Show and Sale. The mid-19th century handmade sled commands a price of $2,250 — not exactly the one you'd want to use for wintertime fun — but a wonderful addition for collectors. Also displayed are a Lebanon County drawer blanket chest and various items from the same era.

Dog Paintings Put The Bite On Collectors

Here's proof that "every dog has it's day!" On Feb. 13, not only will proud owners display their pooches at the annual Westminster Kennel Club Dog Show in New York City, but doggy paintings will be offered at Doyle Galleries "Dogs In Art" Auction. Ever since last year's specialized Doyle dog painting auction collector interest has grown in a category that has remained relatively quiet for decades.

The success of the first specialized dog art auction, two years ago in London at Doyle's counterpart in London, Bonhams Auction House, caught the eye of Lois Webre, Doyle's New York vice president director of marketing.

"Most of the buyers were Americans," he noted. "Wouldn't it be a coup to not only have a dog painting auction in America, but have it during the week of the Westminster Kennel Club Dog Show? In fact, why not a whole week of dog related events?" The result is four days of lectures, a doggy brunch and the auction."

Serious interest in dog paintings began with Queen Victoria's love of dog breeding that led to dog portrait in the 1880s. The earliest portraits were of hunting hounds followed by lap dogs

(Turn to Page B26)

Oil on canvas. Signed Franklin Whiting Rogers. "Setter in a Landscape." Estimated between $30,000-$40,000.

Dog Paintings

(Continued from Page B24)

painted with their mistress. In general, paintings have depicted purebreds as sporting dogs to show the animal's working abilities, highlight the breed's physical characteristics, and as a pet portrait.

"There are three categories," Webre pointed out. "Sporting, pet and mixed breed. I'm fascinated by the breed portraits because they show how breed standards have changed. For instance, an 18th or early 19th century Pekinese has a snout that is different than today's dog." He also noted that many of the early dog paintings depict the dog in hunting scenes.

Alan Fausel, director of paintings at Doyle, observed that "early paintings of bull dogs and pugs show how the breed has evolved." An example in the auction is a dog that has the color and body of a Border Collie, but the head is not typical. "Often these paintings will have a naive or 'folk' look to them."

Estimated prices in this auction cover a wide spectrum from engravings for $200-$400 to $30,000-$40,000 for an oil portrait of a King Charles Spaniel by noted English painter Thomas Woodward. He is now considered one of the leading animal painters of the first half of the 19th century. The painting up for auction was commissioned in 1844.

"Certain dog portraiturists such as John Emms always bring top dollar," said Fausel. "Especially appealing is his 'A Hound and Puppies' oil on canvas that is estimated between $40,000-$60,000. However, some wonderful studies that aren't signed can do very well.

"If last year's standing-room-only group of bidders is any indication of collector interest I expect new records," said Fausel. At that sale, a John Emms painting, "A Jack and Two Knaves" zoomed over estimate to $140,000.

Clues: "One of the finest and most popular dog painters of the 19th century was Sir Edwin Henry Landseer. "He was a perfectionist who studied and dissected animals so that he could paint them more realistically," said Fausel. "His pieces sell for top dollar when they come to market. However, there are also problems for collectors. Many amateurs copied his oils and others are "after Landseer." They should be so marked "after."

"Usually people collect by breed and the quality of the work," Fausel says. "Most costly are pictures of such sporting dogs as retrievers, hounds and setters. Next expensive would be Afghan hounds and Salukis, known as sighthounds.

On down the money scale, would be lap dogs (spaniels, terriers and pugs). And last would be working dogs such as German Shepherds and border collies.

Antique Detective Questions and Answers

I purchased this small desk with the lacquer finish and neoclassical painting of a woman, cupids and flowers. The interior has four small drawers below a shelf. The entire desk, except for the apron, is framed with dore' bronze. Is it French? How old is it?

D.D.T. — Naples, Fla.

Your lady's desk is Louis XV style, probably gilt metal mounted, c.1900, French with a Vernis Martin lacquer finish, invented in the 18th century by the Martin brothers in Paris. Check the underside for cross hatched, 18th century saw marks. If circular, the piece is 19th century. To be sure the trim is dore' bronze, make a small scratch. If it comes up silver, it is not, and probably the desk is one of many late 19th, to early 20th century reproductions. As such, it could sell at auction for $4,000-$5,000.

I have a postcard size, autographed photo of President Theodore Roosevelt, c.1900s, showing him seated on a Cunard steamship with the Captain and officers. How would I go about selling it?

K.M.B. — Bridgewater, N.J.

Write to Christina Carver Cahill, specialist, autographs/photographs, c/o William Doyle Galleries, 175 East 87th Street, New York, NY 10128, with details.

I would like to sell a heavily carved, open cabinet that appears to be Oriental. Can you tell me something about it, where to sell it and the value?

L.C. — Staten Island, N.Y.

From you photostat, your made-for-export Japanese display cabinet, c. late 19th to early 20th century could sell at auction for $1,500-$2,000. Contact James Callahan, Asian specialist, Skinner Galleries, 357 Main Street, Bolton, MA 01740.

Dog Paintings

(Continued from Page B26)

There's humor in the three, offbeat, contemporary dog paintings by Thierry Poncelet being offered. Poncelet hunts down old ancestral portraits from estate sales, flea markets, and antique shops. He "restores" each piece by carefully choosing a dog breed and then painting in the head of the animal over the subject's. A bit macabre perhaps are the human hands in all the portraits.

PUBLIC AUCTION

OF

VALUABLE EASTERN LANCASTER COUNTY REAL ESTATE

3 VACANT LOTS CONTAINING 14.6 ACRES +/- IN SALISBURY TOWNSHIP

★TUES., APR. 3, 2001 5:00 PM★

LOCATED AT: 6246-47 PLANK ROAD, NARVON, SALISBURY TWP., LANCASTER COUNTY, PA. From Route 340 & Route 10 intersection at Compass, take Route 340 West to Churchtown Road (1st right), turn right approximately 1 mile to Plank Road, turn right to Auction Watch for signs

★REAL ESTATE INFO & METHOD OF SALE★

PARCEL #1, & #2 WILL BE OFFERED INDIVIDUALLY AND TOGETHER

PARCEL #3 WILL BE OFFERED INDIVIDUALLY

PARCEL #2 (5 829 acres), 6247 Plank Road, and PARCEL #3 (3 279 acres), 6246 Plank Road, have been probed and are suitable for a standard on-lot septic system

PARCELS #1, #2, AND #3 are in an agriculturally zoned area. Zoning board approval has given approval for the building of a house on PARCEL #2 and PARCEL #3

PARCEL #1 contains no road frontage. No house can be built on this parcel without road frontage. If buyer purchases both PARCEL #1 and PARCEL #2 and combined them into one parcel which would equal 11 344 acres, buyer could place house on PARCEL #1 or PARCEL #2 and an additional one acre lot could be subdivided off 11 344 parcel, providing buyer transfers that lot to buyer's family member, which would include son, daughter, mother or father.

Prospective buyers are encouraged to contact Robert Mohn, Zoning Officer of Salisbury Township, to verify information at (717) 768-8059

AUCTIONEERS NOTE: Great country lots with easy access to major routes and most Chester County areas Don't miss this opportunity to purchase large homesites all ready to build on

PAYMENT TERMS: 10% down payment day of auction Balance by May 4, 2001 Buyer pays all Realty Transfer Taxes

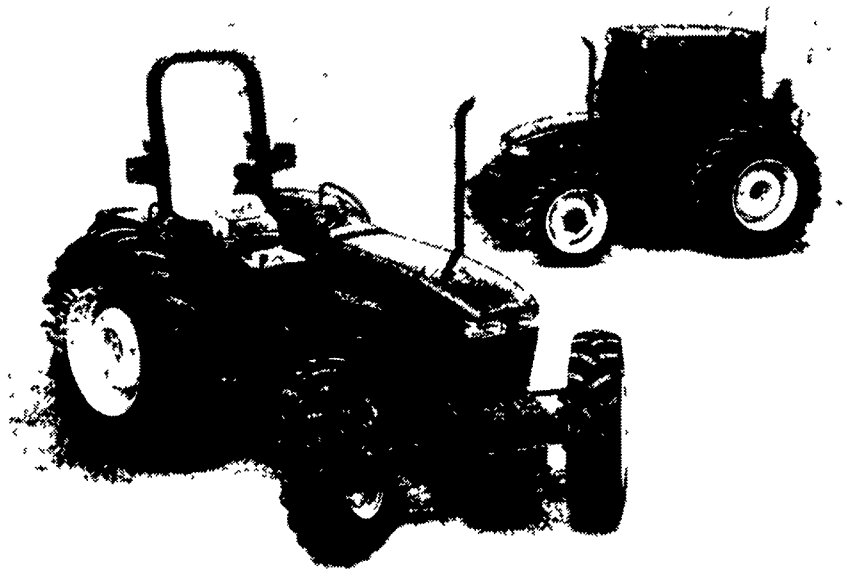
• For Qualified Buyers - Ask Your Local Dealer For Special December Rebates



A new standard from the 3-cylinder leaders

New Holland has raised the standards for 42 to 62 PTO hp tractors with the introduction of TND and TNS models

The higher standards include:

- Proven engines: up to 36% torque rise
- Exclusive SuperSteer™; 76 degree turning
- Exclusive Traction Management System
- Iso-mounted, fully enclosed cab with standard A/C, heater, tilt/telescope steering, front/rear washers/wipers, best electronic dash, best visibility, and more
- Clutchless power shuttle fingertip control
- State-of-the-art 16x16 Synchro Command™ transmission with 4 speeds under 1 mph

NEW HOLLAND

Building on a good thing

You might recognize the engines, drivelines and axles on the new New Holland TS tractors. They have excellent reputations based on past performance. Thousands of customers have put these components to hard use and benefited from their performance and durability.

So, New Holland wasn't about to change a good thing. They made other improvements to these 70- to 90-PTO-hp tractors instead – like increasing the horsepower, improving the comfort of the cab, relocating the fuel tank for added convenience, adding a top road speed of 25 mph, upgrading the electrical system and adding outlets and modernizing the styling.

Better see these exciting 70- to 90-PTO-hp TS tractors for yourself. And find out how good design can become even better.

WHITE AGCO PRECISION PERFORMANCE

On The Mark, Get Set, Grow!

Precision farming starts with precision seed placement. And that's exactly what you'll get with the White 6100 Series planters. Our pull-type planters feature an exclusive air-metering system that's designed to singulate every seed. Its low air pressure, edge-drop seed discs and short, 18" seed drop ensure precise seed placement for maximum germination.

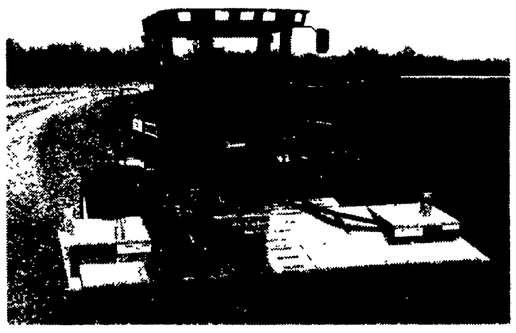
Introducing The ALL NEW Hesston Self Propelled WINDROWER



For unmatched windrowing speed and capacity, you can't beat the Hesston 8550S Self-Propelled Disc Windrower. Thanks to its 165-hp Cummins diesel and a 15'3" rotary disc header, it offers the potential to run 30 to 100% faster than a sicklebar header.

Chassis
- Rear tilting hood for easier and improved access to the engine compartment
- Larger tires (23.1x26 compared to 21.5Lx16.1)

Hydraulic System
- Increased header lift pressure for better lift capability (2500 psi vs. 2000 psi)
- Hydraulic header angle tilt is standard

Engine and Accessories
- Fuel fill platform and access ladder for easy access
- 80 gallon fuel tank (60% larger)

Cab
- Cab is wider and quieter for added comfort
- Seat mounted control console adjusts both vertically and horizontally relative to the operator for more comfort

8070 Rotary Disc Header
- Full 10 spindle cutoff (compared to 8+2 design on 8500)
- Three 90° gearboxes eliminated from drive system
- 33% wider skid shoes for improved wear (8" wide)

Water Quality On Your Dairy

Is water quality on your farm an important component of your overall management program? Do you know the quality of water that your cows are drinking? Do you know what impact poor quality water can have on your cows levels of milk production?

The answers to these questions, along with management changes to make the necessary improvements, can help you to increase the productivity and profitability of your dairy farm.

Improving and maintaining high quality water for your dairy cows is an important factor to the success of your dairy business. According to a University of Nebraska publication, Water Quality and Requirements for Dairy Cattle, dairy cows need to consume about 4.5-5 pounds of water for every pound of milk they produce.

Even a small limitation of water intake will cause dry matter intake to decrease 1-2 pounds daily which could limit peak milk production by 2-5 pounds. If peak milk is reduced by that amount, your cows' milk production will likely be reduced by 400-1,000 pounds per year. At $13 milk, that can be $130 or more per cow per year.

The first step in assessing the situation at your dairy is to collect and test a water sample from your well or other water source. It would be helpful to select a good independent water lab to complete the water tests. The lab should be able to provide clarification on the tests they complete and make recommendations about acceptable levels of bacteria and other components found in your water.

If the tests come back with good or acceptable results, you should then schedule the next regular water test for six months later. It is very important that you regularly reassure yourself that you still have an acceptable water supply.

Then move on to the next step and test water from your drinking troughs or cups.

If the results of the test show that one or more aspects of the water is unacceptable, take action to make the necessary improvements. Work closely with the testing lab, water quality specialists and water treatment specialists to design the most effective system for your dairy. Water conditioners, chlorination systems, and ultraviolet (UV) light are some common treatment systems found on Pennsylvania dairies.

Generally, once you are assured that you have acceptable water being supplied to your cows, most dairymen are confident that the cows are drinking good quality water. This may or may not be what is actually happening. Similar to nutritionist doing TMR tests from the feedbunk, it is recommended to test water quality from the water trough or cup.

A research study that was recently completed shows extremely variable results on tests of water taken from the drinking source. Cow manure, feed other debris can recontaminate even the highest quality water.

According to Tom McCarty, Water Quality Extension Agent, the research did not prove that any particular management practices directly lead to higher quality water being consumed by your dairy cows. However, it did show quite profoundly that farms can achieve high quality water in their troughs.

In addition, more than half of the farms sampled could dramatically benefit from improving the quality of water in the drinking troughs.

Table one shows a summary of the results. These results are quite alarming, considering that many of the farms sampled thought they were providing good water to their cows. Much of the bacteria that was identified in these samples likely came from manure, feed and other contaminates that was introduced into the water at the trough.

Managing the watering trough is the primary control point for you or your herdsmen to monitor. This is the point where you need to make some important management decisions, develop a strategy to implement those decisions and begin a method of monitoring your progress.

The key objective of this process is quite simple. Minimize the amount of manure, feed and other debris that enters the water supply. While this objective is much easier said than done, you should set up a system to regularly monitor your water quality directly from its source and at the point where the cows drink it.

Table 1: Summary of water tests taken from the drinking troughs and cups.

Test	25th %	50th %	75th %	100th %	Acceptable*
Total Bacteria	50,000	1,415,000	3,950,000	7,740,000	< 1 million
Total Coliform	0	2000	14,000	170,000	< 50
Fecal Coliform	0	0	4000	90,000	< 10
Fecal Strep	0	0	12,000	1,420,000	< 30
Pseudomonas	0	2000	40,000	3,790,000	< 10,000?
pH	6 4	7 2	7 5	8 8	5 5 to 8 5

*Acceptable levels are taken from the Northeast Dairy Practices Council publication NPDC 30 July 1990

Points About This Research Study Summarized by Tom McCarty

Water quality was not different on the farms that suspected problems when compared to those that didn't. The use of drinking cups provided about the same quality of water to the cows as did drinking troughs. There were herds with high production levels with both good and poor water quality.

There also were herds with lower production levels with good and poor water quality. This data cannot say what would happen if the water quality were improved for any one herd.

However, we would expect improvements in water quality should lead to the opportunity achieve higher production levels.

The one firm conclusion from this study is that the bacteria test taken in the milk house bears no relation to the quality of water the cows are drinking. The bacteria counts depend on the cleanliness of the trough or drinking cup.

Dairy Extension Agent
Adams County

MILK AMERICA'S HEALTH KICK

Evaluate 'Two Pools Of Energy' To Maximize Production

DES MOINES, Iowa — Selecting a hybrid for corn silage means assessing both nutritional and production agronomics to maximize livestock performance and reduce feed costs.

"Producers need to consider a silage hybrid's total value package in terms of agronomics, yield potential, and nutritional quality," said Dr. Bill Mahanna, general manager of forage products at Pioneer Hi-Bred International, Inc. "To maximize yields, producers should make sure a hybrid provides the maturity, standability, disease and insect resistance and drought tolerance traits needed in their area.

"Then, to ensure optimum animal performance, it is important to select hybrids based on grain yield because grain is about 80 percent more energy dense than stover," Mahanna said. "And, there's only a small range in stover digestibility among hybrids."

Results of a four-year University of Wisconsin Corn Silage Consortium study to prioritize corn silage selection criteria confirm Mahanna's recommendation. The studies determined five targets of equal importance with corn silage selection. Nutritional targets included silage yield, grain (starch) content, and fiber quality. Agronomic targets included disease resistance and correct relative maturity.

"We did find some variability in quality measurements for corn silage, and as a result, we concluded producers should consider nutritional value, but still need to consider silage yield first when selecting a hybrid for silage," said Dr. Jim Coors, professor of agronomy at the University of Wisconsin.

"Many companies provide ratings for silage quality, and it's especially important to consider fiber digestibility within ratings such as University of Wisconsin's milk per acre equation, which is a calculation that combines yield and nutritional value," said Coors.

Nutritionally, corn silage is unique because it consists of both forage and grain, which are energy sources of carbohydrates. However, Mahanna notes the type of energy from each component greatly varies, and that is why Pioneer distinguishes between the importance of starch content (readily available energy or RAE) versus fiber digestibility.

"Corn silage supplies two pools of energy — a stover or green pool and a grain or yellow pool," said Mahanna. "Starch provides a rapidly available source of energy to the animal, while the green pool releases energy more slowly. Both pools are important."

Grain supplies more energy on a pound per pound basis than stover, but stover makes a significant contribution to proper rumen function. When the two pools are balanced appropriately, animals receive a more consistent supply of energy and nutrient quality that greatly affects animal performance and profitability.

Mahanna notes that by keeping the advantages of both the "green and yellow" pool in mind, producers can more easily narrow the range of hybrids they should consider for silage. Producers should also consider their ration needs and primary feedstuffs in their herds' diets when selecting a hybrid for corn silage.

"If a ration consists of 50 to 70 percent corn silage, producers should choose hybrids that have high total plant yield, good grain content and high total digestibility," said Mahanna. "Highly digestible fiber from the stover and moderate levels of readily available starch from the grain are important to optimize rumen function."

When alfalfa makes up 50 percent or more of the ration, producers need to consider the grain content of the silage. "Selecting a silage hybrid with high grain content can boost the energy level of the ration," Mahanna said. "A high grain-to-stover ration will deliver a higher level of starch as readily available energy in the diet."

Mahanna advises producers to consider planting only silage hybrids that have undergone extensive agronomic and nutritional screenings before being offered for sale. Hybrids should have a minimum of 20 side-by-side plot comparisons over a two- to three-year period to ensure that yield or nutritional differences in hybrids are due to genetics, not environmental causes, maturity differences, sampling or laboratory errors.

"Pioneer takes these steps to ensure that the company can predict with a high level of certainty the future performance of a hybrid in a customer's environment," said Mahanna.

CORN TALK

PENNSYLVANIA MASTER CORN GROWERS ASSOC., INC.

Corn Talk, Lancaster Farming, Saturday, January 20, 2001

Three Inputs Can Directly Affect Corn Yield

Jeff Stoltzfus, center, spoke about different corn herbicide trial rates at the twilight field meeting at the Sylvan Blank farm in June. Producers and ag representatives toured the crop trials at the farm, planted by New Holland farmer Gene Martin.

The corn was planted May 5 in about two dozen corn plots, measuring 50 feet long by 10 feet wide (four rows across). *Photo by Andy Andrews*

ANDY ANDREWS
Lancaster Farming Staff

NEW HOLLAND (Lancaster Co.) — Three basic producer inputs can have a direct relationship on yield, according to an agronomy agent who spoke during a young farmer twilight pesticide meeting

Bob Anderson, Lancaster County crops agent, said the factors are seed, fertilizer and planting

When purchasing corn seed, "spend to get the best variety you can afford," Anderson told more than three dozen producers and agri-industry representatives

Anderson, who spoke at a twilight pesticide meeting at the Sylvan Blank Farm in New Holland in late June, said that growers should purchase the company's "top line, not something cheap

"It will pay for itself," he said

Fertilize, noted Anderson when necessary If you don't need it, "don't buy it," he said "You only need so much of it ' Fertilizing includes proper liming

(Turn to Page 2)

Nutrient Use Advantage To Dent Versus Flint Corn?

ANDY ANDREWS
Lancaster Farming Staff

QUARRYVILLE (Lancaster Co.) — Dairy producers-corn growers have to start putting a "value to what you're growing, instead of thinking it's a 'bushel of corn' or a 'ton of silage,'" said Leland Miller, owner of Advanced Agronomics, an agronomic consulting firm located here

Miller, who spoke in mid-November to about a dozen Solanco Young Farmer Association members, outlined some advantages dent corn provides over the more popular flint varieties

In a test conducted in France and published in a leading dairy science magazine, according to Miller, dent corn showed improved percent starch in dry matter compared to flint corn It also showed marked improvement in other areas, including dry matter and percent starch digestibility

The dent corn exhibited a 30 percent improvement in starch use by the cow

Looking at how well the

Utterback To Speak At Decisions 2001 Conference

ALLENTOWN (Lehigh Co.) — Bob Utterback, ag marketing adviser for Farm Journal magazine, is the featured speaker at the Decisions For the Real Beginning of the 21st Century Seminar Jan 23 here at the Days Inn and Conference Center

Paul Knight, Pennsylvania State climatologist, instructor of meterology at Penn State University, and manager of the Weather Communications Group, will also talk. Paul has been the senior forecaster for The New York Times since 1986 Paul is also the producer, co-host, and on-camera meterologist for WPSX-TV's Weather World

Dan Wolf, president of the Pennsylvania Master Corn Growers Association, will give his organization's perspective on public policy

For information on the conference, contact John Berry at the Lehigh County Cooperative Extension office, (610) 391-9840

Ed Herrmann, Solanco Young Farmer adviser, at the young farmer program demonstration plot, measuring three acres at the Swift Middle School. Half the plot was planted in Roundup Ready corn and half conventional. *Photo by Andy Andrews*

Supplementation Of Grazing Beef Cattle

Beef cows are agriculture's great scavengers. During most of the year, beef cows can meet most of their nutritional requirements from byproduct foods, crop residues, and pasture. There are situations, however, when supplementation is needed. The steps in determining these needs are:

1. What are the productive goals of my beef cattle?
2. What metabolic and (or) health issues are related to grazing and pasture management?
3. How can I best deliver supplements in my herd?

Production Goals

Production goals for grazed beef herds are usually grouped in either reproduction in the cow-calf enterprise, or in growth of younger, backgrounded cattle in preparation of feeding high grain diets. For the cow-calf enterprise it has been shown that supplemental feed purchases can greatly influence profitability.

Data from the 1995 NCBA Cattleman's College using the SPA database shows the most important tool is rotational grazing and better pasture management. In combination, it follows these factors overwhelm all others in cost reduction.

We need to know if the cows indeed have a nutritional deficiency. Nutritional needs are based on the average weight of the animal to be maintained and the function performed by the animal such as growth or lactation. Maintenance is the feed "overhead cost" calculation that must be considered first.

For example, a 1,000-pound cow has 15 percent less maintenance cost than a 1,200-pound cow. The nutritional needs of cattle are very different both within and across classes of production. Table one illustrates the variability in needs for different classes of cattle and the same cattle in different phases of production.

The key to nutritional requirements in beef cattle is meeting energy needs. Protein needs are relatively low, and energy needs have much more variability. Consider the data shown in Table two. These results are taken from the same pastures over two years.

Again, variability both within and across years on the same pastures is the key issue. Note also that, when comparing protein needs from Table one with protein provided in pasture in Table two, grazing beef cattle seldom have a protein deficiency when grazing fresh forage.

Secondly, note also in Table two the energy value of the forage (NEg) stays relatively constant during the typical season in rotationally grazed pastures and is lowest in mid-season when dry matter is also lowest. It follows that beef cows that have access to sufficient amounts of growing forage in rotationally grazed pastures will seldom have a deficiency of energy and protein in their diet.

There are, of course, always exceptions. Fresh, growing forage will always be superior to mature, dormant material or to most crop residues. For mature, dormant material, energy is again most likely to be the deficient nutrient. For example, fresh, growing orchardgrass will have about 70 percent higher protein and energy content than that in mid-bloom.

Grazing corn crop residues requires the following supplementation strategies:

1. Using portable electric fences to rotationally graze the field will increase the value of the residue. Allow one-half acre per cow for each 25 days of grazing.
2. For the first 30 days, a mineral supplement is adequate. For example, 40 percent T.M. salt, 40 percent dicalcium phosphate, and 20 percent vitamin A premix (5,000 I.U./gm.). After 30 days, a protein supplement that supplies one-third to one-half of actual protein per head daily with the mineral mix will be required.
3. After 30 days, supplemental protein and energy should be considered.

- Lick tank placed well away from water source to avoid over-consumption (1-2 pounds of a 40 percent CP supplement is adequate).
- Five to 10 pounds of hay, depending upon condition of cows and amount of stalks in field.
- Three to six pounds of corn, depending upon condition of cows and amount of stalks left in field.
- Combination of the above, but do not discourage grazing by overfeeding.

Growing Cattle

While the data in Table two show there may be no deficiency in pastures for steers to gain 2.5 pounds per day or more, this will seldom occur for two reasons: the intake required to reach this level of production is seldom achieved; and, secondly, protein digestibility and quality factors can create a protein deficiency.

These factors are usually overcome in mature cows because of higher dry matter intake. In cases where forage protein level is very low (less than seven to eight percent crude protein), the relative amount of digestible energy and protein will dictate performance because rumen microbes cannot use the available energy in the forage. Protein supplements will be highly effective in these conditions.

Nursing calves will also require additional nutrients not supplied by milk after about 90 days after birth. Pasture alone may not allow peak growth potential to be reached as shown by Wilson (1989) where creep grazing resulted in 75 percent of the calf growth compared to grain creep.

Early weaning is practiced when forage supply is limited, but it can be shown (Comerford et al., 1995) there must be some supplemental grain feed available even for high quality pastures to attain the same seven-month weight as calves allowed to continue to nurse. Faster growth is not always economical. In the Comerford et al., (1995) study, it was shown grain feeding resulted in non-economical costs of grain. This was also shown by Comerford et al., (1996) when supplementing grazing Holstein steers with molasses-based liquid feeds. Steers consumed 9.6 pounds of liquid feed per pound of additional weight gain compared to pasture-only, which results in a cost of gain over $1. per pound. These results are also shown in data from Rouquette (1995) in the following table:

Corn-based supplements for stocker cattle on winter annual pasture

Supplement (lbs./day)	added gain lbs/day	supplement efficiency (lbs. supplement/lbs. wt. gain)
.74	.38	1.9:1
1.43	.77	1.9:1
2.44	.45	5.4:1
4.06	..45	9:1

It is obvious from these results that supplementation for grazing cattle is effective only at low levels that do not force substitution of forage intake with grain intake. Substitution rate depends on forage quality, level of nutrients in the supplement, energy sources, and feeding rate (T. McCollum, 1997).

Conversely, producers have the opportunity to reduce forage intake by feeding high levels of energy supplements. Work by Cravey et al., (1994) showed feeding 0.7 to 1.0 percent of body weight of corn supplements to grazing cattle resulted in a 1:1 substitution rate, and stocking rate could be increased by 33 percent without changing animal performance. These results have application during drought conditions or dormant periods.

Supplementation of growing cattle must depend on growth rate targets, the price of supplemental feeds, the availability and quality of forages, and the age and sex of the animals.

Mineral Nutrition And Metabolic Disorders

Mineral supplements for grazing beef cows have traditionally included calcium and phosphorus mixed with salt in free-choice blends. Phosphorus was generally recommended to increase reproductive performance, but there is some indication the need for additional phosphorus in the diet of cattle is not needed.

Forage species will influence the availability of phosphorus, and data in Table two show there is an increased need in high-milking cows and growing cattle. The need for phosphorus in diets will continue to be under close scrutiny because of its implications in nutrient management.

Magnesium is deficient in grazed forages during periods of lush growth. Free-choice mineral mixtures with salt are the most effective way to deliver magnesium to grazing cattle. Many commercial mineral mixtures are available for this purpose.

Copper and zinc needs are usually met in this region from grazed forages and water. Selenium is deficient in soils in many parts of Pennsylvania, and should be part of any mineral supplemental program. The daily requirement for cows is about .2 ppm, and this may come from mineral supplements, forages, and water.

Excessive supplementation is not necessary and can be toxic. From a practical standpoint, it is difficult to prepare a "homemade" mineral mixture to supplement selenium. When using selenite as the selenium source, a 500-pound batch designed for ____ pound per day of intake would require only 0.1 pound of sodium selenite in the mixture. Failure to mix the material properly could result in toxicity problems. Commercially-prepared mixes are available that will provide correct mounts of selenium. Conversely, many so-called "trace-mineralized" salt products do not provide sufficient selenium supplementation.

Bloat is caused by excessive gas production from ingestion of many legumes. A report from Majak (1995) provides the following supplementation strategies for bloat.

Mineral supplementation will not reduce the incidence of bloat.

The only additive tested that would reduce bloat was poloxalene, (Bloatguard®) delivered either in a block form or as a water additive.

Seasonal weather conditions, including a killing frost, did not influence the incidence of bloat.

Waiting until the dew was off alfalfa before grazing is a method to reduce bloat.

Fescue can contain a fungus that will cause increased body temperature and poor performance in grazing cattle. Methods to control the influence of infected fescue pastures include:

1. Eradication: fescue pastures are killed with a herbicide and replanted with an endophyte-free variety of fescue or another forage.
2. Strategic grazing: toxicity increases with plant maturity, so graze infected pastures before seedheads appear.
3. Dilution: cattle are supplemented with grain or pastures are interseeded with legumes to dilute the amount of toxic forage that is eaten using the substitution principle.

Bin-Run Seed Offers Pitfalls To Growers Seeking To Cut Corners

DES MOINES, Iowa — With low commodity prices, producers are looking for ways to cut costs.

Saving nonpatented soybeans for seed next spring may seem like a good place to start. However, leading university experts advise growers to think twice before turning to the bin for next year's seed.

"I generally discourage growers from saving seed, primarily because I'm not sure all farmers are aware of which products are patented," said Ellsworth Christmas, extension soybean specialist at Purdue University. "Beyond that, growers have to evaluate the true investment they will have in using grain for seed and realize, when they are all done, there is no guarantee of quality on seed from the bin. There is a guarantee on purchased seed."

Christmas encourages growers to compare the economics and value of saved seed with that of purchased seed. First, consider the percent of grain lost in the cleaning process. According to Christmas, more than 25 percent of soybeans in Indiana were discarded during cleaning in 2000. The lost income in grain sales must go against seed cost.

Other costs to include are cleaning itself, storage, handling, and germination testing.

Furthermore, Purdue studies show a yield loss of 1.2 bushels per acre when bin-run soybean seed is compared to certified seed of the same variety. That alone can make up the difference between saved and purchased seed.

"Farmers can produce just as good a quality seed as a seedsman can, but they must realize when using their own seed there is no recourse if the seed has poor germination or poor vigor," Christmas said.

Keith Whigman, extension soybean specialist at Iowa State University, also discourages planting from the bin. Patented varieties, such as those with the Roundup Ready gene, are his first concern. Major penalties exist for growers who save these herbicide-tolerant varieties for seed. Past that, he said, there are a great many benefits to new seed, particularly when the relatively minor cost of seed is compared to other costs of soybean production.

"The biggest benefit to buying seed is the opportunity to purchase new varieties. These usually have better disease packages and improved yield potential," Whigham said. "Over the long term , we've found new varieties offer a one-half bushel average yield advantage each year."

- *37-INCH WHEELBASE*

GEHL 4835

- *STANDARD 57-HP OIL-COOLED TURBO-CHARGED DIESEL*
- *SAE-RATED LIFT CAPACITY OF 1,625 LBS. (counterweights Increase Lift To 1,775 Lbs.)*
- *41-INCH WHEELBASE*

BETTER NUTRITION & PEAK FORAGE HARVESTING CAPACITY!

6, 7, & 9 Ft. Hay Pickup Attachment Available

Increase Production & Profits with a Gehl Crop Processor™ Better feed starts with better harvesting. That's what you get with a Gehl crop processing forage harvester. First to put crop-processing rolls in a pull-type forage harvester, Gehl remains the leader with the original Model 1275 and the all-new Model 1075.

- ***HIGH-SPEED GROOVED ROLLS*** crack kernels, break-up the cob and shred stalk material
- ***BENEFITS*** include increased milk production and improved herd health.
- ***MODEL 1275*** is today's top-capacity pull-type forage harvester, handling up to 300 PTO horsepower.
- ***NEW MODEL 1075*** handles up to 225 PTO horsepower
- ***EXCLUSIVE AUTOMAX™ LOAD MANAGEMENTS SYSTEM*** helps boost capacity.

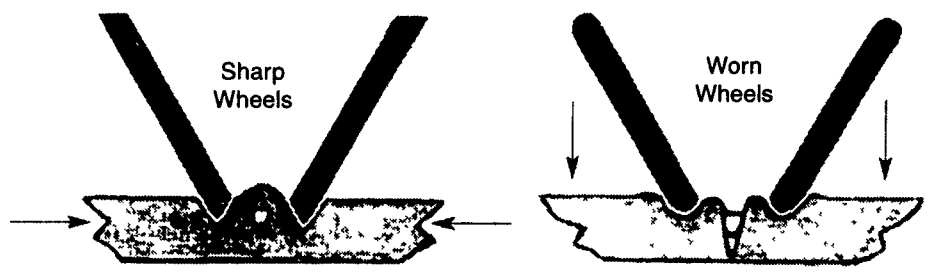
Ph. 717-656-6109

Attention:

Kinze/John Deere Planter & No-Till Drill Owners

Did you know that those old cast iron closing wheels can be **reconditioned** to "like-new" performance for a **fraction** of replacement cost?

Now is the time to get ready for tough planting conditions like sod and dry, hard soil. **We** can help your older planter or drill to close those seed trenches properly. (See illustration)



After all, if a field is worth planting, why not do it right?

Benefits include:
✔ Less closing pressure
✔ More uniform germination
✔ Improved stand population
✔ Increased yields

A Better WAY to Process HAY!

The Reel Auggie® HAY MAXX® SYSTEM
is a better way to effectively process hay without adding stress to the mixer.

KNIGHT HAY MAXX SYSTEM
advantages . . .

- **RATION QUALITY AND FLEXIBILITY**
- **QUICK HAY PROCESSING**
- **LONGER PARTICLE LENGTH**
- **NO OVER PROCESSING**
- **MORE LEAVES, FEWER FINES**
- **LESS POWER REQUIRED**
- **LESS FRICTION AND WEAR**
- **BETTER RUMEN HEALTH**

Call your local Knight Dealer for a demo!

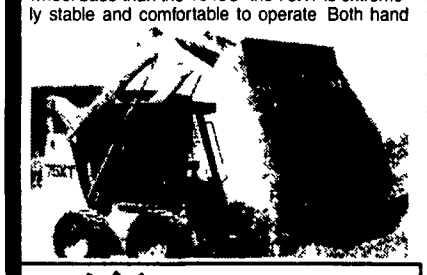
New Increased HP Model - Now 70 HP! *w/Optional Counterweight*

New 75XT Lift and Carry Skid Steer

The 75XT with its extremely stable and maneuverable wheel base and power reach lift design is the perfect machine for virtually any lift and carry application The 75XT features 2200 pounds of operating load for handling heavy loads in agricultural landscaping and general construction applications Large square bales and silage bales are easily handled by the 75XT With 10% greater wheel base than the 1845C the 75XT is extremely stable and comfortable to operate Both hand control and foot control options are available to match operator preference The field proven, reliable Case 4-390 engine, rated at 60 Horsepower provides low cost of operation Coupler attachment pickup specifications are the same as the 1845C, so buckets, brooms, augers, bale spikes, auto rakes, snow blades, and scrap grapples can be used Other attachments, such as pallet forks, must be matched to the increased lift capacity of the 75XT

The 75XT is a perfect skid steer for a wide variety of applications in the rapidly expanding lift and carry market It sets new standards in power and lift capacity with added value and more performance for the investment.

(The loader with more reach).



The All Purpose Spreader
Skid loader mounted (Universal hook-up), hydraulic driven, unloads right or left, can be used to spread bedding or feed silage, etc Simple cost efficient design

Utility/Snow Blade
Hydraulically adjusts for light utility dozing, backfilling and removing snow

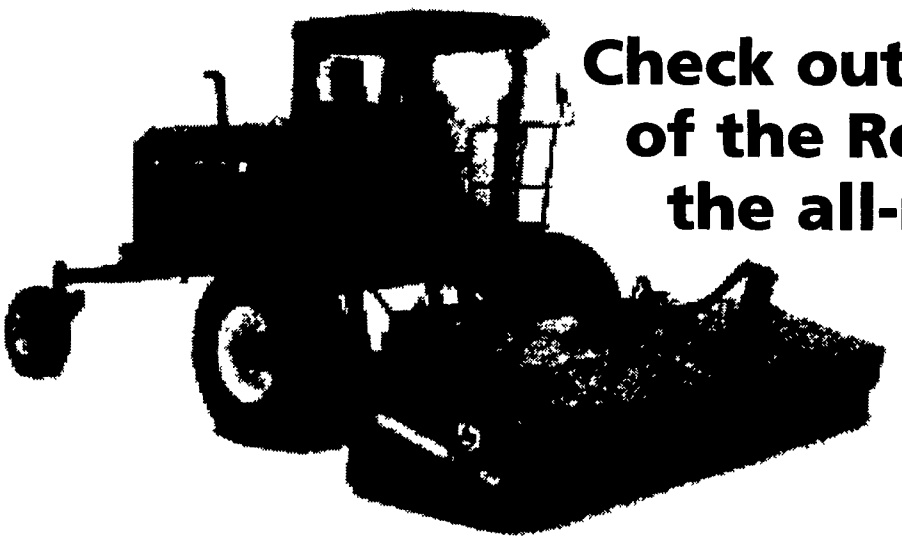
Start Productive Stay Productive!

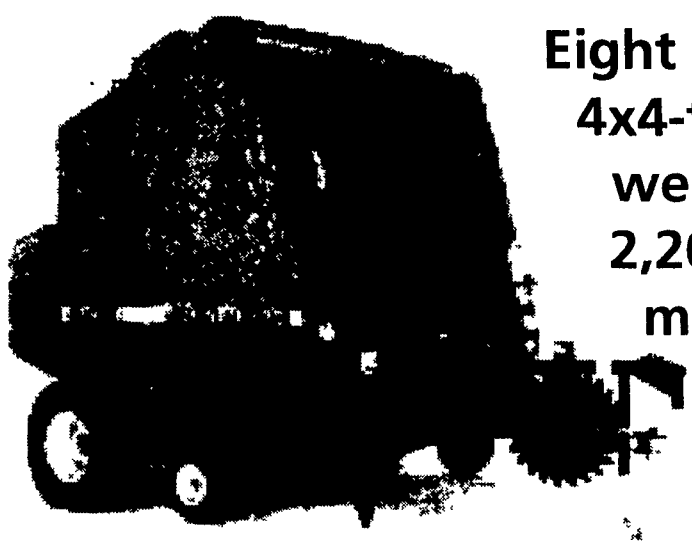
For harvesting productivity, you've come to the right place.
Because making you more productive is what Deer Creek is all about.



Check out the President of the Rotary Club, the all-new 4990 Rotary Windrower!

*In Stock

America's most popular round balers

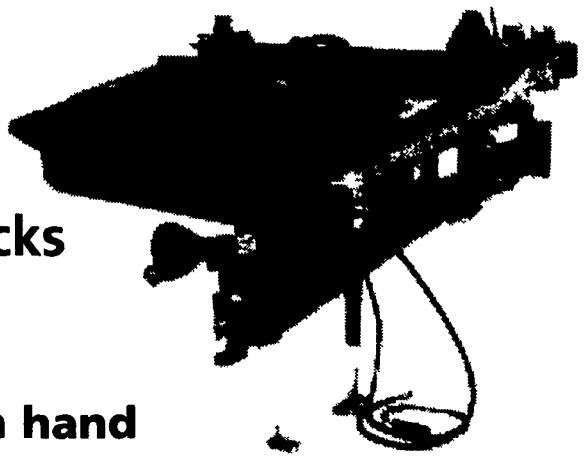


Eight models make tight 4x4-to 5x6-foot bales weighing up to 2,200 pounds. Two models are designed specifically to bale silage.

Rotary MoCo's with exclusive shearhubs

Do you have collision insurance? Exclusive shearhubs minimize cutterbar damage from rocks or debris. Standard on all John Deere rotary MoCo's.

*All sizes on hand



Here's all you really need to remember...
We do it RIGHT, at the RIGHT price, RIGHT now!

Are Your Seeds Looking For a Finer Bed?

The Krause 6150 Landsman's thorough tillage and incorporation action provide a seedbed that's level and encourages good emergence through excellent seed to soil contact. There's not another finishing tool made that can match the performance record of the Krause 6150 Landsman. Krause's large selection of rear finishing attachments lets you tailor your Landsman to your specific soil and residue conditions.

LANDSTAR 6318	18'	22045	McAlisterville
LANDSTAR 6318 (With Hydraulic Disc Gang Attachment)	18'	22043	Intercourse

Single Pass Tillage Saves You Time and Money.

Save Your Time

Single pass tillage allows you to disc, incorporate chemicals, cultivate and finish in one trip.

Save Your Money

Because the Landsman is designed to operate at 7½ MPH, you'll save time and burn less fuel, and have less wear on your tractor. You can reduce your tillage costs by up to 70%.

These Landsman machines are in stock and ready for immediate delivery. Call a Hoober salesman today!

Built for you

For a tractor that matches your needs perfectly, choose a TN tractor from New Holland. It's packed with big tractor features that save you time and make you money.

- New 3-cylinder engines deliver lugging power that will send you looking for bigger jobs to tackle
- Clutchless power shuttle option lets you shift from forward to reverse with only the touch of a finger.
- Faster cycle times thanks to the highest pump flow in the business.

Stop by and pick out a tractor that's built for you. A New Holland TN tractor

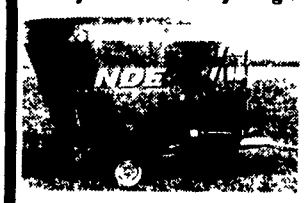
David Good
717-933-9186 Myerstown, Pa

Give your cattle everything they need - every last leaf!



With the NDE Vertical Mixer, you won't watch your feed nutrients blow away Cut your baled hay or baled silage fresh each day right in the mixer! The NDE Vertical Mixer will cut large or small, round or square bales Then add the other ingredients your ration calls for

The NDE Vertical Mixer will give your cattle a TRUE TMR that is light and fluffy, and truly palatable, no matter what you add to it by products, commodities, long-stemmed hay, silage, grain

MASSEY FERGUSON
Massey Ferguson® is a worldwide brand of AGCO Corporation, Duluth, GA

In Loving Memory Of

Lloyd W. Weaver
Born: June 27, 1942
Entered Into Rest: January 30, 2001
Aged: 58 Years, 7 Months, 3 Days
Husband of
Esther S. (Nolt) Weaver

The accident happened on January 29 at 11:55 a.m. on a farm north of Allentown. He fell from a skid loader while trying to counterbalance it when loading a hay head. The loader tipped forward and threw him to the ground.

BUSINESS ❖ NEWS

11th Annual Ag Outlook Successful

CARLISLE (Cumberland Co.) — AgChoice Farm Credit brought two nationally known agricultural experts to a well-attended 11th annual Ag Outlook Forum here at the Clarion Inn and Conference Center.

Theme of this year's forum was "Ten Golden Rules of Management."

Lou Moore, professor of agriculture economics at Penn State led the forum with predictions on the commodity trends and prices for this year. Moore warned if the economy continues to slow down in the second quarter, we could be headed for a recession.

Dr. David M. Kohl, professor of agricultural economics at Virginia Polytechnic Institute and State University, discussed the skills in management that today's farmer must have to be successful.

Kohl's "Ten Golden Rules of Management" included advice that most businesses could use, such as invest outside the farm as to not put too many eggs in one basket, set goals of 10 to 15 percent for annual growth, realize that family living is an overhead cost, that cash is king, that networking with community and politicians is essential, and that time is a commodity.

Stream Bank Fencing: Conservation That Pays Twice

HARRISBURG (Dauphin Co.) — Generous funding now allows landowners to install stream bank fencing at a net financial gain — conservation that pays twice.

The first payoff is the benefit to landowners, livestock, and the land from the fence system. This is nothing new, but the second payoff — a financial one — is new, and worth taking notice.

Under current USDA programs, farmers can expect $3,800 to $35,000 *above costs* for each half-mile of stream fenced. The highest payments are for buffers 50-feet or wider. But there are options for narrower buffers that can pay for the fence and still put money in a farmers' pocket.

Until now, many farmers have installed stream bank fencing for its many benefits, even though it came at a net cost to them. These benefits include:

• Improved herd health: Clean, dry cattle are healthier cattle. Wet, muddy conditions increase the risk of udder infections, foot problems, and several other serious diseases. Controlled access at stabilized crossings also reduces leg injuries from steep, slippery banks. Better water quality means better drinking water and higher production.

• Options for pasture management. Stream bank fencing splits a typical pasture in two. Once the electrified stream bank fence is in place, creating additional paddocks is cheap and easy. Improved management options can significantly increase the efficiency of pasture use.

• Good public relations. Agencies and the public are increasingly aware of farm management, especially how it affects streams. Stream bank fencing is a big step in protecting streams and being a good neighbor.

• Stewardship of the land. Buffers provide habitat for a host of wildlife from songbirds to waterfowl to game animals. Improvements to streams and fisheries are large and rapid. Reduced bank erosion protects property like fields, buildings, lanes, and bridges.

Federal, state, and private conservation groups are focused on streams and watersheds. The result is unparalleled incentives for installing stream bank fencing. Landowners can install fences at a net monetary gain.

USDA programs, with added sweeteners in some areas from Pennsylvania Department of Environmental Protection, Chesapeake Bay Foundation, and Ducks Unlimited, provide the biggest return. A 50-foot buffer with typical requirements for fence, crossings, and plantings of trees and shrubs will pay $3,800 to $35,000 above costs for each half mile of stream enrolled. Roughly half comes as a one-time payment when the project is completed.

The balance comes as annual payments over the 15-year contract. Payments vary with soil type, project details, and geographic location. Landowners interested in USDA programs should contact their county FSA office.

The other stream bank fencing program that gives monetary compensation for land converted to stream buffers is the Habitat Stewardship Program of Chesapeake Bay Foundation and Ducks Unlimited. By design, incentives are less than USDA programs. The program is intended to accommodate certain land not eligible under USDA.

This includes building buffers as narrow as 15-feet, putting buffers on streams with existing tree cover, and fencing cattle out of wetlands where there is no stream. CBF/DU is also a non-governmental option for those preferring this. Chesapeake Bay Foundation's full-page ads in two February issues of *Lancaster Farming* provide additional details on both USDA and CBF/DU programs. Contact your county conservation district if interested in CBF/DU.

In Pennsylvania, Chesapeake Bay Foundation has worked with more than 300 landowners to create buffers on more than 130 miles of stream banks. These projects have provided funds beyond the cost of the fence to help farmers pay for other BMPs including barnyard renovation and runoff controls, stabilized cattle lanes, and heavy use area protection, grassed waterways, silage leachate collection systems, rotational grazing systems, additional fencing, wildlife habitat projects, and more.

If a landowner does not expect financial compensation for land converted to buffers, there are additional programs to consider. The Pennsylvania Department of Environmental Protection pays 100 percent of fence and one crossing. U.S. Fish and Wildlife Service pays 50 percent to 100 percent of fencing and crossings. USDA and CBF/DU programs require trees and shrubs in the buffer. Pennsylvania DEP and USFWS programs do not. Some areas have additional fencing programs with varying details — your county conservation district should know.

F.M. Brown's Customers Learn About Biotech

LEESPORT (Berks Co.) — Recently 275 people attended two of Brown's customer appreciation dinners at Shady Maple and Leesport Auction Center's multipurpose room.

Topic of the meetings was "Keeping Your Farm On The Cutting Edge."

Dr. Carl Brown, sales manager at F.M. Brown's Sons, Inc., started the meeting with a short discussion of the program and on the impact of new ideas on your farm. He reviewed some of the ways Brown's has kept their customers on the cutting edge of dairy nutrition in the past 30 years.

Brown's was one of the first to provide computerized dairy rations, add fat to dairy rations, use Megalac and bicarb in dairy rations, and recommended the use of added biotin for hoof health and milk production. Keeping customers at the cutting edge of nutrition is important at Brown's.

He then introduced Mark Wagner, Brown's director of nutrition. Wagner followed with a discussion of biotin. Biotin is a B vitamin that was long felt to be unnecessary in dairy rations. Last year at customer meetings, the company discussed recent biotin research in detail. At that time, Wagner summarized research that suggested feeding 20 Mg. of biotin per cow per day would achieve maximum production response and optimum improvement in hoof health. This recommendation was recently validated by a 14-week feeding trial at Ohio State. Their research noted a 6.1-pound improvement in milk yield when biotin was fed at 20 mg compared to a two-pound milk increase when biotin was fed at 10 mg.

Wagner then spoke on Micro-Aid, a product used in monogastric animals since the early '70s and being used in specific dairy rations that contain highly soluble protein sources.

Dr. Marj Faust was the next speaker on the program with the topic, "Biotechnology For the Future — Healthy, Wealthy, and Wise." Faust is an associate professor and extension dairy specialist at Iowa State University. Her background includes degrees from Penn State and North Carolina State, and farm experience working for Rothrock Farms and Keystone Farms. Her research included conducting some of the first feeding trials on Bt and Roundup Ready corn. She stressed that when we talk about these types of crops, we should use the word "biotechnology crops," not GMO crops, because of the negative connotation GMO has for the consuming public. Faust reviewed how genes and chromosomes work to transmit genetic information to the next generation, and the various ways this information can be modified to improve desired traits.

Roy Breneman spoke about mycotoxins and MTB-100, the first patented product that strongly binds mycotoxins to it under a wide range of pHs. Breneman reviewed how various mold mycotoxins could cause immune system suppression, intermittent diarrhea, reproductive problems, and poor appetite. MTB-100 can be fed at the low inclusion rate of ⅓-ounce versus clays that must be fed at eight-ounces to achieve the same level of binding. In addition, since MTB-100 is an organic product harvested from the inner cell wall of the yeast cell, it is broken down by nature and thus is more environmentally friendly than clays.

Speakers at Brown's customer meetings. From left, Mark Wagner, Brown's director of nutrition; Roy Breneman, Alltech: Roy Glocke, Nutraceutix, and Dr. Marj Faust, dairy extension specialist, Iowa State University.

Roy Glocke followed from Nutraceutix. Nutraceutix started in the early '80s as an agricultural company manufacturing Lactobacillus for agricultural purposes. Today its facilities at Redman, Wash. and Lafayette, Colo. manufacture and package bulk microbials for a wide array of human and livestock products sold under various private label brands.

Faust finished up the program discussing biosecurity pitfalls observed in the Midwest as herds expanded from 75 cows to 500+ cows. In her study, 12 percent of expanding herds did so by raising their own replacements and thus kept a closed herd. Another 47 percent purchased heifers 17 percent purchased cows, and 35 percent purchased both heifers and cows to meet expansion needs. When animals were purchased, 59 percent came with unknown health histories and 41 percent came from herds with known health histories. The results of her research showed that no matter which procedure was used to acquire cattle, problems were observed after expansion.

Meeting Hosts Farmers In New Holland

NEW HOLLAND (Lancaster Co.) — Renaissance Nutrition, Inc., sponsored a winter farmer meeting Thursday, Jan. 18 here at Yoder's Restaurant.

Many area farmers attended the event, which included presentations by several experts in agriculture, as well as numerous representatives from other companies.

Dr. Brian Perkins, technical service specialist for Monsanto Dairy Business and noted expert in dairy nutrition, gave a presentation on how to manage the high-producing herd. He entertained questions throughout the presentation.

His materials covered such topics as nutrition and ration planning, cow comfort, and special attention to all aspects impacting the "transition cow."

Two other dairy experts presented topics. They included Dr. R. Tom Bass II, a noted nutritionist and veterinarian, who spoke on foot and hoof care and the impact this has on productivity and profitability, and Ian Shivas, known for his work in forage digestibility in Canada and the U.S. He spoke on forage quality and testing done to help ensure a standard for nutrient effectiveness.

The day's events also featured a drawing, with prizes provided by all represented companies. The first prize, an 18-inch chain saw, went to Daniel Lapp of Lancaster County.

Seedway Expands Emmaus Facility

EMMAUS (Lehigh Co.) — Seedway recently announced the expansion of its Emmaus location.

Seedway Emmaus operates as a warehouse, seed conditioning, and office location, serving customers in southeast Pennsylvania, New Jersey and Delaware.

Continued sales growth has necessitated the increase, which includes additional personnel, seed storage space, and equipment.

Additional seed mixing capability has also been installed to accommodate increased demand for turf and forage seed mixtures. "These investments all focus on insuring our customers superior service," said Jerry Davis, Emmaus location manager.

Potato Breeding Program Helps Feed Industry Demand

WOOSTER, Ohio — In the late 1970s, Ohio joined regional USDA potato breeding and genetics projects for the purpose of identifying varieties suitable for the state's climate and demanding markets. Nearly 26 years later, the effort has contributed to a potato industry that impacts Ohio's overall agricultural production and caters to a variety of customers, from potato chip companies to consumers choosing potatoes in the grocery store.

Most potato varieties developed for production in the years Ohio has participated in the projects began as experimental selections. Few experimental selections become varieties but when they do, their impact can be significant. In fact, variety selection is a key component of successful production and all varieties commonly grown in Ohio were borne from USDA regional projects. Popular commercial varieties include Jemseng, an early maturing variety from Canada; Monona, a midseason variety grown primarily for the potato chip industry; Katahdin, a USDA introduction; and Red Pontiac, a late maturing red-skinned variety used for home gardens and roadside selling.

"Any variety being grown on a large scale initially came through these projects in Ohio or elsewhere," said Matt Kleinhenz, an Ohio Agriculture Research and Development Center scientist who is a member of the program.

Kleinhenz recently presented his findings at the projects' technical meetings and will also present an update on the potato germplasm evaluation program at the Ohio Fruit and Vegetable Growers Congress Feb. 7-9 in Toledo, Ohio.

Ohio participates in the North central and Northeast regional breeding and genetics projects, made up of potato geneticists, breeders, physiologists, and others from areas ranging from Maine to North Dakota and from Canada to Louisiana and Florida. Each year, participants gather to discuss the results of their evaluation of numerous potato genotypes — evaluations employing criteria such as maturity, disease and stress resistance, and physical and chemical tuber traits. Comprehensive evaluations are needed to distinguish from among many selections and to meet strict market requirements.

"The members meet to decide which genotypes will be tested and at which locations. We also decide the fate of each experimental selection — will it be tested further, discontinued, or will the breeder be encouraged to release it as a variety? For the cooperating states, it is a very important process for science and the industry," said Kleinhenz. Last year, OARDC researchers evaluated 157 genotypes, five or six of which may potentially become a variety grown commercially in Ohio.

If not for efforts like these put forth on a large scale, potato production in Ohio and elsewhere would be limited. The success of the potato industry lies partly in the crop's ability to perform well in different climates.

"A variety may perform well in Maine and New York but not in Pennsylvania or Ohio. The climates are completely different," said Kleinhenz. "To get varieties that are adapted to Ohio, they need to be grown and tested here."

The breeding programs are also beneficial since the potato industry relies heavily on research completed by USDA and university breeders, rather than private industries. Such breeders, however, are few and located primarily in the northern states, so collaboration with project members is essential. So also is the support Ohio's potato industry has given to the projects. "Ohio's industry has really stepped forward over the years to assist the projects with personnel and support. This support is a big part of what we've been able to accomplish," said Kleinhenz.

The potato industry in the United States is big business. The crop is grown in every state in the country. In Ohio, more than 150 million pounds of potatoes are produced each year, with an estimated farm gate value exceeding $8 million. It is one of Ohio's most significant vegetable crop commodities, providing customers and potato-chip makers with a desirable product that comes in different colors and shapes and with various chemical traits. Some varieties are oblong, thick-skinned, dry, and best for baking, while others are round, thin-skinned and best for making chips. Many are moist and red or purple in color. Having varieties with specific traits is important, said Kleinhenz, as potatoes have so many uses.

"Potato chip companies, retailers, and the restaurant trade each look for a particular set of traits," said Kleinhenz. "Our goal is to assist the industry in finding that right potato for a given market."

In addition to conventional potato production, OARDC researchers are also working to identify varieties suitable for use in the growing organic production industry. "There are reasons to suspect that varieties suited for conventional production may not be suited for organic production. Also, variety selection may help overcome challenges in organic production, like weed management," said Kleinhenz. Last year, three red-skinned potato varieties (Dark Red Norland, Red LaSoda and Red Viking) faired well under preliminary tests completed by Kleinhenz and John Cardina, a weed scientist at OARDC.

2001 CONFERENCE

2001

Mid-Atlantic Dairy Management Conference

"Implementing Competitive Business Strategies"

March 7th and 8th, 2001

Radisson Penn Harris Hotel and Convention Center, Camp Hill, PA

Make Your Plans Today!

2001 Program Highlights

Wednesday, March 7th

11:00 Registration
1.00 Opening Session - Dairy Industry Trends and Opportunities
1:45 Session #1 - Organizing/ Structuring the Dairy Business for Profitability
U S Top Dairies· Benchmarks for Success
A Family Farm Growing for the Future· Goals, Priorities & Planning
Management and Farm Evolution
BREAK
3 30 Session #2 - Personnel Management
Taking the Stress out of Performance Appraisals
Organizational Structure of the Family Business
Turning Talents into Productivity
5 00 Trade Show, Social and Buffet Stations
7·15 Drawing for Door Prizes
7 30 Session #3 - Producer Panel
How the Competition Gets It Done
Motivation and Training Strategies
Working with Consultants

Thursday, March 8th

7 00 Continental Breakfast
8·00 Session #4 - Freedom to Operate
Forage Espionage Satellite Mapping
Making Regulations Work FOR You
Including Biosecurity Issues in your Expansion Plans
Producing Milk for a Competitive Market· The rules have changed
BREAK
10:30 Session #5 CAFO Panel
Concentrated Animal Feeding Operation at Evergreen Farms
CAFO Plans...and the Nutrient Management Component
CAFO Permitting Process for Evergreen Farms, Inc
1.00 Session #6 - Implementation Toolbox
BREAK
Session #7 - Implementation Toolbox (Concurrent Sessions Repeat)
3·15 We Can Meet the Challenge
3 30 Adjourn

Chambersburg, PA - Do you want to hear how successful dairy producers have organized and structured their dairy business for profitability? Are you ready to move from benchmarking and goal setting to action? Do you need ideas for motivating and communicating with your employees? If you answered yes to any of these questions, than the ***2001 Mid-Atlantic Dairy Management Conference*** is for you The planning committee of dairy producers, industry leaders and University personnel has scheduled an exciting conference with the goal of providing leading edge information and ideas to progressive dairy producers and industry leaders in the Mid-Atlantic Region.

The early registration discount ends February 14th, so make your plans today to attend this leading edge conference to be held at the Radisson Penn Harris Hotel and Convention Center in Camp Hill, Pennsylvania on March 7-8, 2001

For a complete program, list of sponsors, and conference details, visit our website at http //www das psu edu/madmc or contact **Beth Moore, Conference Coordinator by e-mail - beth@innernet.net or phone (717) 375-2639.** For registration questions call Sandy Gunsallus (814) 865-5491

MID-ATLANTIC MANAGEMENT CONFERENCE REGISTRATION FORM
Please return by Feb. 14, 2001

First & Last Name(s) for name tag _____

Business/Farm Name: _____

_____

Address _____

City _____ State _____ Zip _____ Telephone (___) _____

Email _____

Registration fee is $150, $125 for the second person from the same farm - discount is only for dairy producers. This includes a copy of the proceedings, three meals and access to all conference activites
Add $20 for late registration after February 14, 2001.

Mail this form and payment to: Sandy Gunsallus, Mid-At Conference Registrar,
324 Henning Building, University Park, PA 16802 (814) 865-5491
Make checks payable to: **Dairy Management Conference**

I'M NOT LION...

THE CLASSIFIED LIVESTOCK SECTION HAS BEASTLY SELECTIONS!

No-Till Conference Set

YORK (York Co.) — The annual Mid-Atlantic No-Till Conference will be conducted in three locations this year:

- Wednesday, March 7, at the Hotel Magee, Bloomsburg. Contact Mary Wagner at (570) 784-1310, ext. 114.
- March 8 at the Penn Dell Conference Center, Carlisle. Contact John Rowehl in Carlisle at (717) 240-6500.
- March 9 at the Delaware State Fair Grounds in Harrington, Del. Contact Herb Reed at (301) 855-1150.

Registration and time to visit our exhibitors will start at 8 a.m. with the first featured speech starting promptly at 9 a.m. While at the conference, participants will be treated to educational sessions taught by four leading conservation tillage specialists.

Highlighting the conference will be Carlos Crovetto, a world-famous Chilean no-till farmer. Crovetto will share his soil and crop residue management techniques. His methods for renovating badly degraded soils into some of the most productive in the world will be shared. These management practices are very applicable to making no-till soils healthy and productive under northeast U.S. conditions.

Don Reicosky, an internationally recognized soil carbon specialist, from the Agricultural Research Service in Morris, Minn., will discuss the loss of organic matter and carbon with different tillage systems. Reicosky will explain how tillage operations release carbon from the soil and describe the impact carbon loss has on maintaining soil organic matter and quality.

Don Reicosky.

At the Pennsylvania locations, Dr. William S. Curran from Penn State will share weed control strategies for no-till systems. Dr. Sjoerd Duiker from Penn State extension will lead a panel discussion on the use of cover crops in conservation tillage systems.

At Delaware, Steve Groff of Lancaster County will describe his innovative no-till vegetable rotation that includes up to 15 different crops.

Sponsors of the conservation tillage conference include Penn State, Pocono Northeast and capitol region resource conservation and development areas, and the USDA Natural Resources Conservation Service (NRCS) from Pennsylvania-New York and Maryland. Commercial exhibitor space is available.

Advanced registration for the conference is $20 and must be returned by Feb. 23. Registration after that date will be $25. This fee includes lunch and registration materials.

To receive registration materials, use the contacts provided for the specific location. Registration is limited, so register today.

$3 Soybeans A Possibility, Ag Economist Says

COLUMBUS, Ohio — The cumulative effect of high natural gas prices could very well result in both $3-per-bushel corn and soybean prices if farmers follow through by shifting enough corn acres to soybeans this spring, said agricultural economist Allan Lines, Ohio State University.

"This might be the year when corn prices and soybean prices are equal," said Lines. "This would be a historical reversal, because bean prices are usually 2-½ times as great as corn prices."

A massive acreage shift could be in the offing as farmers face either shortages of nitrogen fertilizers or huge price increases for it. Nitrogen is a key input for corn production, but not for soybeans. Natural gas is the source of hydrogen, as well as the source of energy, for producing anhydrous ammonia, from which other nitrogen fertilizers are derived.

"The price of natural gas has risen sharply from $3 per million British thermal units (Btu) last summer to current prices in the $9-10 mmBtu range," Lines said.

In most cases, farmers can't get their hands on any nitrogen fertilizer at all, Lines said. In the rare instances it is available, the prices have doubled or more since last year, he said. Anhydrous ammonia prices may be as high as $420 per ton, whereas 28 percent solution may be about $200 per ton, he said.

"One farmer told me that he secured all his nitrogen fertilizer last July, and that he was seriously considering putting it up for sale to the highest bidder and then planting all soybeans," Lines said.

Fewer corn acres would boost corn prices to possibly $3 per bushel or more, Lines said.

A massive acreage shift to soybeans would exacerbate already huge soybean supplies that have been steadily dragging down prices in the past three years. Last year, farmers raised a record 2.8-billion bushel soybean crop, while prices were forecast to range from $4.50-$5 per bushel, compared to per-bushel prices of $4.63 and $4.93 for crops harvested in fall 1999 and 1998, respectively.

Another thing that would push farmers to plant more soybeans is the government's generous marketing loan rates for soybeans that have been protecting farmers from the steady decline in bean prices. In fact, Lines thinks the subsidy insulates farmers from market signals that would tell them to plant fewer beans due to the lower cash prices.

Meanwhile, the fact that farmers planted two million fewer winter wheat acres last fall indicates they are thinking of shifting most of the reduced wheat acreage to soybeans due to the government's price protection, Lines said. U.S. farmers planted 41.3 million acres of winter wheat for the smallest total acreage since 1971, he said.

Lines cautions farmers they should carefully evaluate their soil fertility levels because they might need less nitrogen than they think to make good yields. If that's the case, they'd be able to take advantage of any corn price increase.

"The price of corn should get interesting this fall," Lines said.

For example, if a farmer knows his or her nitrogen supply will be down by 10-15 percent, then it'd be a good bet to stick to intended corn acreage, Lines says. Reducing nitrogen applications by 10-15 percent for most farmers will likely have little impact on yield, he said.

On the other hand, a farmer with 50-75 percent of a normal supply should consider shifting corn acreage to soybeans, Lines said.

In Ohio, farmers planted 4.45 million acres of soybeans last year, or 3.3 percent less than 4.6 million acres planted in 1999. Indiana farmers planted 5.65 million acres, or less than one percent more than 5.6 million acres planted in 1999.

For corn, Ohio farmers planted 3.55 million acres in 2000, or three percent more than 3.45 million acres planted in 1999. In Indiana, farmers planted 5.7 million acres of corn in 2000, or two percent less than 5.8 million acres planted in 1999.

Considering The Future Of Penn's Woods

Rance Harmon
Penn State School Of Forest Resources Associate

Has seeing a truck loaded with logs or evidence of a recent timber harvest ever left you wondering about the future of Pennsylvania's forests.

Timber harvesting can be a vital tool for enhancing forest vigor, diversity, ability to support wildlife, and beauty. However, a poorly planned or conducted timber harvest can cause a significant decline in the condition of the forest and its ability to generate useful products and income in the future.

There is concern among all sectors of the forestry community that high-grading — the harvesting of only those trees that will give the highest immediate economic return — may lead to a widespread decline in forest resource quality. Two practices, diameter-limit cutting and selective cutting, generally fall into this category.

Diameter-limit-cutting removes all saleable trees above a certain diameter, while selective cutting usually removes the largest, most valuable trees. Neither method gives any thought to the composition of the future forest.

Landowners may agree to high-grading because of a mistaken belief that they are high-quality trees. However, because most of Pennsylvania's forests have grown from old pastures, fields, burned-over, or otherwise cleared areas, trees in the same forest stand are usually about the same age. This means that the trees remaining after a high-grade harvest are not necessarily younger than the harvested trees.

The remaining trees are likely to be slower growing species, damaged, or genetically inferior to the trees that were harvested. By leaving behind physically damaged, slow growing, and genetically inferior trees, high-grading can significantly diminish the quality of the forest ecosystem.

Another reason landowners agree to a high-grade harvest is short-term economic considerations. It is true that high-grading usually nets a bigger financial return initially, but potential environmental degradation and decreased future timber values will more than cancel the immediate cash advantage.

Landowners can protect the future health and productivity of their forestlands by insisting that those who harvest timber or provide forest management advice adhere to best management practices (BMPs) for Pennsylvania forests. A consensus among natural resource professionals, forest landowners, scientists, and representatives from forest industries and environmental organizations went into developing the BMPs to ensure that both the short-term and long-term aspects of forest management activities have a beneficial effect on the entire forest ecosystem.

For more information about alternatives to high-grading, contact our service forester or cooperative extension office.

The Pennsylvania Forest Stewardship Program helps forestland owners learn how to improve and maintain the ecological health of their lands. To find out more about this voluntary program or request free publications about best management practices, contact the Forest Stewardship Program at Penn State's School of Forest Resources at (800) 235-WISE.

USDA Proposes Steps To Ensure The Safety Of Meat And Poultry Products

WASHINGTON, D.C. — In an effort to further reduce the risk of human illness from ready-to-eat meat and poultry products, Agriculture Secretary Dan Glickman announced a proposed regulation that would require meat and poultry processors to conduct environmental testing for generic listeria and establish food safety performance standards for illness-causing bacteria in all ready-to-eat and partially heat-treated meat and poultry products.

"USDA is committed to ensuring the safety of all meat and poultry products throughout their shelf life," Glickman said. "The best way to help ensure the safety of these products is to establish science-based, food safety performance standards and then closely monitor compliance with those standards."

The listeria performance standards proposed today would ensure that all categories of ready-to-eat meat and poultry products are covered by a performance standard. The standards set levels of pathogen reduction and limits on pathogen growth that official meat and poultry plants must achieve in order to produce unadulterated products that contain zero detectable pathogens.

The USDA proposal, which President Clinton directed the department to develop, would also require that establishments producing ready-to-eat meat and poultry products conduct environmental testing for generic listeria as verification that they are controlling the presence of L. monocytogenes.

Under the proposal, which will be published in the Federal Register, Salmonella performance standards for certain categories of ready-to-eat meat and poultry products also would be implemented and, to control the growth of C. perfringens and C. botulinum, performance standards for these pathogens would be required for all ready-to-eat, all partially heat-treated, and in thermally processed, commercially sterile meat and poultry products.

L. monocytogenes causes an estimated 2,500 serious illnesses and 500 deaths each year. On Jan. 18, USDA and the Department of Health and Human Services published a Listeria Risk Assessment, which found that many ready-to-eat meat and poultry products pose relatively high risks to consumers.

Three Inputs Can Directly Affect Corn Yield

ANDY ANDREWS
Lancaster Farming Staff

NEW HOLLAND (Lancaster Co.) — Three basic producer inputs can have a direct relationship on yield, according to an agronomy agent who spoke during a young farmer twilight pesticide meeting.

Bob Anderson, Lancaster County crops agent, said the factors are seed, fertilizer, and planting.

When purchasing corn seed, "spend to get the best variety you can afford," Anderson told more than three dozen producers and agri-industry representatives.

Anderson, who spoke at a twilight pesticide meeting at the Sylvan Blank Farm in New Holland in late June, said that growers should purchase the company's 'top line, not something cheap.

"It will pay for itself," he said.

Fertilize, noted Anderson, when necessary. If you don't need it "don't buy it," he said. "You only need so much of it." Fertilizing includes proper liming.

(Turn to Page 2)

Jeff Stoltzfus, center, spoke about different corn herbicide trial rates at the twilight field meeting at the Sylvan Blank farm in June. Producers and ag representatives toured the crop trials at the farm, planted by New Holland farmer Gene Martin.

The corn was planted May 5 in about two dozen corn plots, measuring 50 feet long by 10 feet wide (four rows across). *Photo by Andy Andrews*

Nutrient Use Advantage To Dent Versus Flint Corn?

ANDY ANDREWS
Lancaster Farming Staff

QUARRYVILLE (Lancaster Co.) — Dairy producers-corn growers have to start putting a "value to what you're growing, instead of thinking it's a 'bushel of corn' or a 'ton of silage,'" said Leland Miller, owner of Advanced Agronomics, an agronomic consulting firm located here.

Miller, who spoke in mid-November to about a dozen Solanco Young Farmer Association members, outlined some advantages dent corn provides over the more popular flint varieties.

In a test conducted in France and published in a leading dairy science magazine, according to Miller, dent corn showed improved percent starch in dry matter compared to flint corn. It also showed marked improvement in other areas, including dry matter and percent starch digestibility.

The dent corn exhibited a 30 percent improvement in starch use by the cow.

Looking at how well the

Utterback To Speak At Decisions 2001 Conference

ALLENTOWN (Lehigh Co.) — Bob Utterback, ag marketing adviser for Farm Journal magazine, is the featured speaker at the Decisions For the Real Beginning of the 21st Century Seminar Jan. 23 here at the Days Inn and Conference Center.

Paul Knight, Pennsylvania State climatologist, instructor of meterology at Penn State University, and manager of the Weather Communications Group, will also talk. Paul has been the senior forecaster for The New York Times since 1986. Paul is also the producer, co-host, and on-camera meterologist for WPSX-TV's Weather World.

Dan Wolf, president of the Pennsylvania Master Corn Growers Association, will give his organization's perspective on public policy.

For information on the conference, contact John Berry at the Lehigh County Cooperative Extension office, (610) 391-9840.

Lender's Status Upgraded

LEWISBURG (Union Co.) — AgChoice Farm Credit has been designated a preferred lender by the federal Farm Service Agency (FSA).

To quality, AgChoice Farm Credit originated more than $30 million in current FSA guarantees.

Preferred status simplifies AgChoice Farm Credit's process for getting loan guarantees. According to Tim Eshelman of the Lewisburg AgChoice Farm Credit office, the upgrade will allow "for quicker and more cost-effective service to our customers." Less information and documentation is required of AgChoice Farm Credit when requesting guarantees.

The Farm Services Agency is a USDA agency that provides direct loans to farmers and guarantees loans made to farmers by other leaders. FSA loan guarantees enable AgChoice Farm Credit to assist borrowers with limited equity or collateral, such as young and/or beginning farmers.

All AgChoice Farm Credit branch offices are capable of processing FSA guaranteed loans as preferred lenders. AgChoice Farm Credit staff will be training with FSA staff in January to review changes in the loan guarantee process.

DGS Issues Groundwater Report

NEWARK, Del. — A report on the distribution of selected pesticides in Delaware's shallow groundwater has just been released by the Delaware Geological Survey (DGS) at the University of Delaware.

"The Occurrence and Distribution of Several Agricultural Pesticides in Delaware's Shallow Groundwater" is the title of the report prepared by DGS members and the Delaware Department of Agriculture. The investigation was supported in part by the U.S. Environmental Protection Agency.

The area of investigation encompassed all of Delaware, south of the Chesapeake and Delaware Canal, where the pesticides studies are predominately used. It summarizes data collected from 136 wells from 1995 through 1998. During that period, 350 water samples were collected and screened for the agricultural herbicides atrazine, alachlor, simazinc, metolachlor, and five others.

Approximately 80 percent of the 1,725 analyses performed showed no measurable concentrations of the pesticides studied. Although some analyses indicated the presence of a pesticide, confirmatory tests showed that all domestic wells meet state and federal drinking water standards.

Copies of the report may be obtained by calling DGS at (302) 831-2833 or by sending e-mail to delgeosurvey@udel.edu. Copies also are available from the Delaware Department of Agriculture pesticides section by calling (800) 282-8685. The report also is available on the DGS Website at http://www.udel.edu/dgs/webpubl.html and the department of agriculture website at http://smartmap.com/dda/.

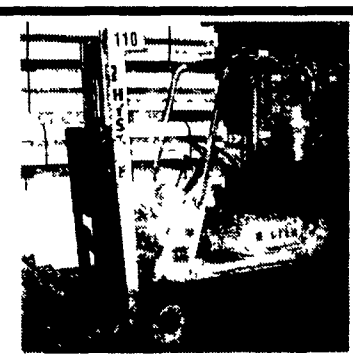
Heavy Equipment Loader Parts, Inc.
10070 Allentown Blvd Grantville, PA 17028
No Sunday Calls (717) 469-0039



For Sale: Hyster forklift. I believe this unit is pre-1980, I am not sure. It has a single stage mast, solid rubber tires, and 3000 pounds lift rating. Because we were planning on keeping this for along time, we spent over $2000 on repairs and maintenance The engine has been rebuilt, it has new rubber tires, and a new starter and flywheel. It runs and drives fine The lift height is approx 12 ft. We moved to a new building and now I need a higher lift. That is the only reason I am selling it $3200.
717-657-9252 ask for Creed or email me creed@redrose.net

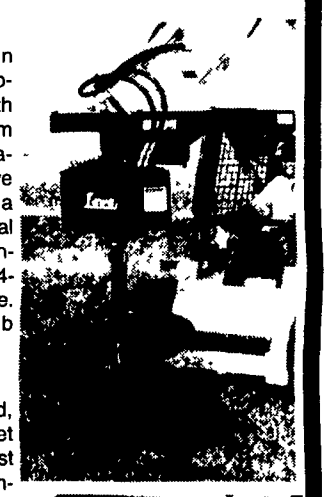
Dozer Blades
Deluxe multiple position hydraulic controlled dozer blade Heavy duty design for heavy duty dozer work

Snow Blade
Snow removal is simple with these easily mounted blades. Complete with trip springs and skid shoes, blades are available in six and seven foot widths Unit hydraulically angles to remove snow or perform light dozing and backfilling duties

Augers
Hydraulically driven augers provide fast, economical digging. With auger bits available from 6-inch to 36-inch diameters, these augers give you the ability to handle a multitude of tasks. Normal digging depth is 48 inches. Optional 14- and 24-inch extensions available. A 30-inch tree/shrub auger is also available



Steel Tracks
For sand, snow or mud, Gehl steel tire tracks get you through the toughest weather and working conditions to get the job done. A patented self-cleaning design keeps mud, ice, rocks and other debris from wedging in the tracks.

Power Landscape Rake
The perfect tool for landscape contractors With a unique rake action, these units collect rocks and surface debris, leaving soil in a loose, level condition They remove rocks, sticks and metal from the ground surface, leaving you with several inches of loose, relatively debris-free soil Their unique action will also dethatch tired turf, leaving the surface ready to re-seed

Having Problems Getting Milk Cold?

Consider a Mueller pre-cooler. It's an excellent way to lower the cost of cooling milk. It reduces milk temperature with water pumped straight out of your well. Mueller® precoolers are available in sizes to work with any system. If lower electric bills would make your life easier, call us and ask for more information on Mueller precoolers.

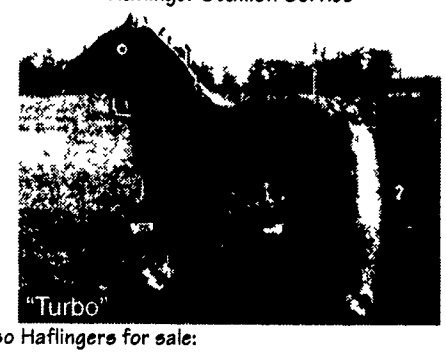
SPRINGVIEW FARM
State and International Grand Champion Haflinger Stallion Service


"Turbo"
Also Haflingers for sale:
Two yearling fillies from imported stock and national champion parents.
A pair of yearling geldings. Half brothers sired by national champion stallion - Marveli of Hylite.
A two year old gelding. He will make a show or pleasure prospect. Well trained to drive.
A team of geldings. Well broke. Nice to be around and to use. They are good enough to be show horses. Well matched.
A two year old mare by two time national champion stallion - Star Standard. Her dam also won the national show. Well started in the cart.
Now taking deposits on stallion prospects from our 2001 foal crop. If you want a stallion, now is the time to buy.
If you would like some more information, contact Gerald Allebach at 814/353-8883 or 814/422-8125

ALFALFA SEED $1.40/Lb.
from the Dakota's Trask Family Seeds
- Features grower-to-grower direct seed sales
- SDSU tested
- Offered to growers for $1 40/per lb in 60 lb bags plus freight
- Varieties S D Common, Vernal and others
- These Alfalfa varieties are proven to compete with the expensive varieties in all conditions and always carry our money back guarantee.

PA farmers have great hay crops with South Dakota alfalfa seed. Emery Zimmerman, Mifflin, PA says, "The South Dakota seed we planted in late April. It's good and thick, has good height, makes good haylage and excellent dry hay. Protein test 21.6 and RFV 132."

Join the numerous farmers in the PA/NY area harvesting wonderful alfalfa from South Dakota seed

SWEETCAKE 16NU

FEED SUPPLEMENT BLOCKS FOR THE LIVESTOCK INDUSTRY

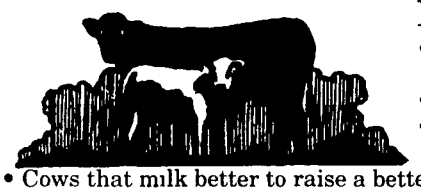
• High Natural Protein • No Urea • Fat Enhanced
• Balanced Supplementation • Safe For All Livestock Classes

Sweetcake Advantages

- Aids in making the best use of your available forage
- Promotes a more even herd consumption, with 24-hour availability to all cattle
- Reduces labor to save you money and give you more time to make important management decisions
- Supplies much-needed vitamins and minerals that forage lacks to help your cattle perform to their genetic potential
- Supplies fat in most formulations to enhance energy intake

For Dairy

- Replacement heifers that grow out soundly and economically
- Body condition on dry cows so they can return to lactation, producing at the maximum potential
- Healthier herds, with essential trace minerals that help prevent metritis, retained placenta and other health problems
- Prompt re-breeding, thanks to essential nutrients



For Beef

- Stronger, healthier calves at birth
- Heavier Calves at weaning
- Cows that cycle better for improved conception rates
- Cows that milk better to raise a better calf

- AVAILABLE IN 200 LB. SIZE -

Attention
Dairy, Swine & Poultry Producers!
New Products Now Available...

With the addition of our new soybean processing facility, we now offer these products to meet your nutritional needs Manufacturing these products ourselves allows us to utilize locally grown soybeans and support our local agricultural community!

GOLDEN PRO 46 XP
This natural, mechanically extruded and expelled soybean product is experiencing great acceptance with local dairymen A course golden colored meal with a 6% fat content, Golden Pro 46 XP is extremely palatable. Golden Pro 46 XP is a natural way to bring the value of high by-pass protein into diets that require a lower fat level

GOLDEN MEAL 40
An 18 percent fat content along with a 40 percent crude protein makes this mechanically extruded meal product a valuable component in a variety of rations. Full fat content gives you a high level of digestible energy, while high temperature extruding ruptures the oil cells for better nutritional absorbtions

CRUDE SOYBEAN OIL
A product of Keystone's expelling process, this oil can be used in a wide variety of on farm applications A natural alternative to animal fats, this oil provides needed energy in various rations

To make these products available, and to help you utilize your home raised soybeans Keystone Mills announces its

Soybean Exchange Program

As manufacturers and distributers of Golden Pro 46 XP and Golden Meal 40, we are anxious for you to try our products We are offering a soybean exchange program featuring these quality nutritional products

20 LAWN AND GARDEN

ALL NATURAL-HARDWOOD MULCH
We offer a premium quality, all-natural, hardwood mulch perfect for landscaping and home gardening applications.
We never use demolition material, ground pallets or chemicals–
so our customers can rest assured that there are no contaminates in our product that could harm plants or flowers. Our mulch is double ground and screened and naturally composted to produce a very rich dark color and fine consistency. Large quantities available for pick-up or delivery.

The Berks County Conservation District is requesting bids for the construction of an Animal Waste Storage Structure to be funded in part by the Chesapeake Bay Program. Construction of this project is expected to begin June 1st, 2001.

The site is in Bethel Township, Berks County.

Prospective contractors will receive a bid package, which contains instructions to Bidders: a Sample Contract Form, The Plans, and a Bid Sheet.

Small and minority businesses and women's business enterprises are encouraged to respond to this invitation for bids. Our Company is a State contractor and is committed to the principles of EQUAL OPPORTUNITY for all persons and AFFIRMATIVE ACTION. We have agreed to the Non-Discrimination Clause in our contract in accordance with the Commonwealth requirements.

The site showing date is schedule for Tuesday, February 27 at 10:00 a.m. at the site.

Sealed bids will be accepted until the public bid opening at the Berks County Conservation District on Monday, March 12 at 10:00 a.m. in the 4-H Conference Room.

To obtain a bid package contact:

An exciting new position with an industry leader

LANCASTER FARMING

publication, is currently searching for an individual with an Ag/Sales background

Become a part of a dynamic team, enthusiasm and persistence a must We will train the right candidate. Salary plus bonus and an opportunity for advancement

Send resume to

Lancaster Farming

1 East Main Street
Ephrata, Pa. 17522
or fax: (717) 733-6058
or call Bill Burgess
(717) 721-4417

EDITOR

Lancaster Farming, the Northeast's largest farm and dairy weekly, is searching for an editor. This highly visible position requires an individual with a proven track record in Management, Editing and Reporting skills. A creative approach to articles along with an eye for photography is what will be necessary in reporting news from a six-state area. Experience in the use of Newsmaker Pagination (Harris system), HTML programs and TMS (Phoenix) are helpful.

We will offer the successful candidate a competitive starting salary and benefit package including:

- Medical/Dental/Vision/Rx
- Drug Insurance
- Company-Paid Retirement Plan
- 401(k) Plan
- Paid Vacation and Holidays

Qualified candidates should submit resume and clips to:

Lancaster Farming

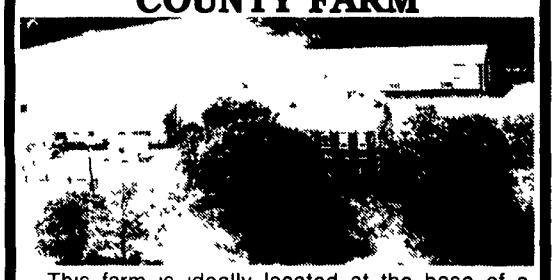
153 ACRE DAUPHIN COUNTY FARM



This farm is ideally located at the base of a mountain range in Northern Dauphin County, (Lykens Valley), near Millersburg The buildings are set several hundred yards off the main road, creating that perfect Currier & Ives setting everyone dreams about with the mountain as a back drop The buildings feature a very well maintained brick center hall farm house with 4 large bedrooms and a large country kitchen The out buildings consist of a 38x40 Bank Barn, 25x42 heated shop and 60x120 Morton pole building used for equipment storage The majority of 100 tillable acres is gently rolling productive farm land with approximately 12 acres of pasture and 41 acres of woodland This farm would be ideal for vegetable production with it's fertile crop land and abundant water supply for irrigation or it would make a perfect country estate, with it's beautiful setting and buildings

Switchgrass Provides Cattle Health Benefits

ANDY ANDREWS
Lancaster Farming Staff

ROCKSPRING (Centre Co.) — Switchgrass can provide some good forage for grazing cattle, particularly beef, according to one USDA-ARS animal scientist.

In one sample conducted before Ag Progress Days in Rockspring last August, a forage analysis of the variety Cave-In-Rock provided 19 percent crude protein and a "very vegetative" NDF of 65 percent, according to Kathy Soder, USDA-ARS soil scientist.

The switchgrass is "very vegetative and quite palatable," Soder said.

Purebred Angus beef from Penn State looked good in body conditioning from the pasture.

If producers want to use the warm-season grasses on pastured beef, they still have to take a "hard look at them," said Soder, to ensure the animals are doing well on pasture. That includes hip bones, rib cover, and how well and how much the animals are feeding.

The past year was good, with a hay yield of 4-5 tons per acre. The switchgrass planted at Rockspring was five years old. Though in some spots it was sparse, with some leaf blotch, one stand is 20 years old and still producing.

According to Jim Cropper, NRCS national forage management specialist, the switchgrass was no-tilled from a corn rotation. The switchgrass should be rotated back to corn after a time to kill any tall fescue or quackgrass that could emerge.

The switchgrass, he said, is very dominant and does well with its good moisture-holding capacity. Graziers should have the animals take the grass down to about six inches of stubble.

The variety, Cave-In-Rock, was developed in Quicksand, Ky. Cave-In-Rock is noted for its adaptability to growing conditions found in the East, especially the high humidity areas. It grows best in years of average rainfall and temperature.

Plants reach more than five feet at maturity. Late maturing, it grows best on fertile, well-drained soils.

At last year's Ag Progress Days at Rockspring in August, Jim Cropper, NRCS national forage management specialist, and Kathy Soder, USDA-ARS animal scientist, inspect the Cave-In-Rock variety of switchgrass. ***Photo by Andy Andrews***

Don't Overgraze, According To Pasture Beef Producer

ANDY ANDREWS
Lancaster Farming Staff

ROCKSPRING (Centre Co.) — Pasture beef producer Conrad Fisher recognized his worst enemy.

When it comes to grazing, "I am my greatest enemy," he told about a dozen producers and agribusiness representatives the past summer at Ag Progress Days in Rockspring. "I didn't recognize when overgrazing was done."

During the drought of 1999, pastures were grazed down too far.

But now, the most beautiful color, he said, is green. After the drenching rains of Hurricane Floyd in September 1999, "in 48 hours, they came back green," he said. "They do come back."

Fisher spoke at a Graziers Forum at Ag Progress Days in August in Rockspring.

Using previous methods of caring for pastures and fields didn't yield many earthworms, Fisher noted. He said that in one field, "I can came back with enough earthworms to go fishing for the day."

By restoring the grasslands of his farm in an 8-9 year period, "the work is allowing us to have some freedom to farm."

Fisher, who farms in the heavily populated area of Montgomery County, near Philadelphia, said his farm has been in the family since 1863. Some land is forest but a good deal is hay, including a mixture of orchardgrass and timothy. The Fishers also grow some sweet corn and pumpkins for a roadside stand.

After speaking with Tim Fritz, extension agent for the area at the

Pa. Grazing And Forage Conference Feb. 28-March 1

GRANTVILLE (Dauphin Co.) — The Pennsylvania Grazing and Forage Conference, scheduled here at the Holiday Inn from Feb. 28-March 1, will feature numerous presentations and discussions focusing on grazing and forages.

This conference is co-sponsored by the Pennsylvania Forage and Grassland Council and the Pennsylvania Grazing Research and Education Center.

Plan to attend the conference to learn more about watering systems for your grazing livestock, pasture establishment and renovation, dealing with the summer shortage of forage or low-cost milking parlors.

In addition to these topics, many more will be presented by a wide array of speakers. The keynote speaker will be Mr. Ben Bartlett, a

Pennsylvania Forage & Grassland Council

Newsletter Section February 10, 2001

PFGC Executive Director's Annual Report

HERSHEY (Dauphin Co.) — The Pennsylvania Forage and Grassland Council (PFGC) was supported by its 225 members and 25 supporting organizations as well as the Pa. state personnel during 2000. Some of the major activities and programs involving the council in 2000 were:

- Co-sponsored the Hay Show at the Pennsylvania Farm Show in January 2000.
- The council co-sponsored the 2000 Pennsylvania Grazing and Forage Conference March 1-2 at Grantville.
- The council supported the Penn State Ag Council in its efforts to build partnership with Penn State College of Agricultural Sciences.
- Seven members of PFGC attended the annual meeting of the American Forage and Grassland Council in Madison, Wis., July 16-19, 2000.
- A pilot forage growers program was conducted in 1999 and software was developed from the pilot and sent to interested counties to conduct their own program in 2000.
- The council presented scholarship at Penn State to Kendra Weaver, Timothy Reid, Matthew Jewart, and Taryn Wentzel, students in dairy and animal science and agroecostystems. A $750 scholarship was presented to Kenneth Cristfulli from Delaware College.
- Awards were presented at the annual meeting to New Holland North America with Richard Adams accepting the special award; to Penn Jersey Extension Partnership for the research/extension award; to J.B. Harrold, project grass coordinator, Somerset conservation district, for the conservation award; Dale Bracken, Indiana County, the conservation farmer award; to Don Bothell, Indiana County, and Glenn and Robin Gorrell, Bradford County, for the pasture producer awards.
- Co-sponsored the Agricultural Progress Days at Rockspring Farm of Pa. State Aug. 15, 16-17, 2000. The council conducted a hay show at Ag Progress Days.
- The council conducted its annual summer social event at the Wayne Harpster farm Aug. 16, 2000 during Ag Progress Days. This year was special in that this was the 40th year of PFGC and the history, "Pennsylvania Forage and Grassland Council — The First 40 Years 1960-2000," was written by John Baylor. Copies were presented to those attending and sent to members.
- *Lancaster Farming* newspaper provided a special forage section again this year called "Foraging Around" in four issues in 2000. This section has been very popular with readers of the newspaper.
- The Pennsylvania Forage and Grassland Newsletter was sent to members four times during the year.
- Council was represented by Roman Stoltzfoos in the forage spokesperson contest at AFGC annual meeting in Madison, Wis. in July, 2000.

PENNSYLVANIA FORAGE & GRASSLAND COUNCIL

Industry, Farmers, Scientist—Working Together Towards a Sounder Forage Program

Dear Supporting Organization, **HERSHEY, PA 17033** January 5, 2001

For 2001 we are planning to promote a Pennsylvania Forage and Grassland Council Coupon Program for the members of PFGC

A Coupon Program would be an opportunity for you to offer some discounts to the members of PFGC as well as making the members aware of the companies that are supporting PFGC

If your company is interested in participating in the 2001 PFGC coupon program please indicate below and fill out the information and return to me by February 15, 2001 A sheet(s) of coupons will be sent to members in April with the PFGC Newsletter We will also promote it, by indicating those supporting organizations that participate, in the April issue of *Lancaster Farming* in PFGC's "Foraging Around" section An expiration date of December 31, 2001 will appear on the coupon

We hope that you will to participate as we work together toward sounder forage and grassland programs

Pennsylvania Forage and Grassland Coupon Program

_____ Yes, I am interested in participating in PFGC's 2001 Coupon Program

_____ No, not this time,but possibly in another year

Maximize Your Yield Potential

For A Price That's Minimal

When it comes to improving Relative Feed Value and maximizing the Crude Protein in hay, nothing outperforms the New Idea® 5209 Disc Mower Conditioner Its high-speed disc cutterbar glides through fields with ease, even in extreme conditions And the unique Ti-Cor® Conditioning Rolls gently condition the stems, speeding drydown

The 5209's reliable design keeps you mowing and conditioning year after year With the segmented cutterbar driveshaft, a New Idea innovation, the cutterbar is truly modular, which makes for easy maintenance

To see the disc mower conditioner that'll exceed your expectations — not your budget, visit your AGCO® New Idea dealer today

THE LEADER IN THE FIELD

Don't Overgraze

(Continued from Page 1)

time (now a multicounty farm management agent), in 1992 the Fishers decided to take up intensive rotational grazing.

This is the third decade of a conservation plan on the farm. Fisher maintains a nutrient management plan.

The area is a hotbed of concern because a farm creek feeds into the Deep Creek Lake, one of the few remaining fresh water swimming areas in the state.

Though Fisher began his grazing operation in a small way, after installing fence, the cows took right to it. He maintains about 15 Polled Hereford brood cows and a 2-year-old stud bull. The Herefords are "excellent at pasture and grazing," Fisher said.

"The cows don't complain, as long as I give them something fresh and green and over eight inches in height," he said.

He uses a 12-hour rotational grazing schedule, beginning at 7 a.m. and shifting at 7 p.m. He uses a solar water pumping system, which pumps water 99 feet to a 3,000-gallon tank. Water is moved 3,600 feet to paddocks.

By allowing the cattle to feed themselves, "that is a milestone for one to relax and come here to talk," said Fisher.

He feeds a supplement mineral mixture, free choice, with selenium. Calves are creep fed. Calves are allowed the high protein content of fresh pasture before the dams are allowed to graze.

At the Graziers Forum in August at Ag Progress Days in Rockspring were, from left, Conrad Fisher, Tom Calvert, and Titus Martin. ***Photo by Andy Andrews***

Because of grazing, Fisher noted he has gotten rid of most equipment Where he used to have five tractors, now he has two. Fisher still has a square baler and two flat wagons.

Every day, he has a drawing of the paddocks he keeps on a pad of paper in his pocket, a pocket calendar/agenda maker, and a camera to take pictures of what the cattle are doing.

Titus Martin, Fayetteville, said he maintains about 123 acres, including 93 in grass and 30 in alfalfa. He maintains 125 milking cows on his farm.

He urged producers going into grazing for the first time to take it slowly. He said instead of taking the whole dairy out on pasture, take the dry herd out first and "learn how it works."

Tom Calvert, who maintains flocks of sheep in Somerset and Greene counties, spoke about the general health benefits of grazing.

1999 Lancaster Amish Profitability Survey Summary

Background

Survey conducted by Timothy J. Fritz, Farm Management Extension Agent
This is a summary of two surveys and a separate more detailed paper is available for each separate survey.
Conventional farms included 8 farms and were recommended by 2 loan officers.
Grazing farms included 7 farms and were recommended by an Amish seed salesman.
Farms from both groups were located in eastern and southern Lancaster County.
1999 growing season was extremely dry late spring through summer and very wet during the fall.

PFGC ❖ SPECIAL REPORT ❖

1999 LANCASTER AMISH PROFITABILITY AND BENCHMARK SURVEY

Tim Fritz
Farm Management Agent

A survey of seven Amish dairies using good grazing management and eight good conventional Amish dairies reveals some interesting findings.

Background

This survey was conducted by Timothy J. Fritz, Penn State Farm Management extension agent, during the later part of 2000 but using 1999 farm data.

The conventional Amish farms were recommended by ag bankers as being very good managers. The graziers were recommended by a seed dealer and had good pasture management. The survey was conducted to establish Amish financial benchmarks for different styles of dairying.

A few cautions need to be pointed out. This is data from one-year only and is only a small sample of farms. There was a lot of variation within the two different styles of dairying, but I believe this limited data can be used for benchmarks to compare individual Amish farms to this data.

Also don't forget about the weather of 1999. The farms were located southern and eastern Lancaster County. Drought was severe from late spring to late summer. Fall conditions were excellent for forage production.

The feed cost of horses and mules is included in the total cow costs. Records were not good enough to separate them out.

As with most data from surveys, there is probably some inconsistencies in expense categories and some best estimates were used to break down the data into the survey format.

Many conventional Amish dairies that I have worked with over the last year did not fair as well as the survey farms, thus I believe benchmarks should be used to serve as a basis for setting farm goals.

The Tables:

The tables included are only part of the survey, but because of limited space, they are limited to the summary and per CWT detailed data for each style. Call (610) 696-3500 for copies.

About the Farms:

Both styles averaged 44 milking and dry cows per farm. The grazing farm ranged from 31 to 60 cows. The conventional dairies ranged from 34 to 55 cows. Some of the farms had income from non-farm sources and was excluded from the survey.

The grazing dairies had a wide variation in their management style. I have attempted to break them into two groups. However, there is not enough of farms from each style of grazing to really make conclusions about the different styles.

Farms 1, 2, 4, and 7: I consider hybrid graziers in that they either were growing corn or feeding a fair amount of supplemental forage during the grazing season.

Farms 3, 5, and 6: I consider as hard core graziers in that they did not grow corn and only fed a little hay.

Special notes on some of the farms.

Farm 2: Grazing system was highly managed but only a limited land base is available.

Farm 3: Stocking rate was too low for not growing any corn.

SPECIAL REPORT

(Continued from Page 7)

Farm 5: Later stages of organic certification (feed cost was adjusted).

Farm 7: Supplemental feeding program may not have been balanced appropriately.

The conventional dairies forage program was a corn silage and alfalfa program and cows were confined for the majority of the day. There was variation in the "push" for production. In general, the push for production resulted in increased profits.

Bottom line difference between the profitability of conventional compared to grazing was very little. Graziers had higher profits per CWT but shipped less milk per cow, which resulted in a slightly lower per cow profit compared to the conventional dairies. However, if one assumes similar production costs and a drop in milk price by about $2 per CWT, the grazier's profits per cow exceeds conventional profits per cow.

There is a big difference between the styles in the individual benchmarks. Although not surveyed, the type of management and labor required is very different. The goals and resources of every farm are different and what style of dairying one chooses should be a personal choice.

Other Thoughts:

- Grazing is in its early adoption stage and both farmers and the support industry are still improving their skills and knowledge base. Mistakes have been made, and hopefully farmers and the support industry will learn from them. In particular, supplemental feeding could be improved. For example, the feed industry, if not familiar with grazing, pushes to much protein, which causes the cows to lose weight. High NSC (energy) supplemental feeds are more appropriate.
- Farm growth or expansion is easier for an Amish grazer, than a conventional Amish dairyman, primarily because of crop harvesting issues. For a grazier, it is just as easy to move a fence for 10 cows as is it to move a fence for 100 cows. (You must have adequate land base). In addition, capital costs for increased forage and manure storage may not be needed for the grazier. Expansion may actually improve the usage of already existing silos and manure systems.
- Grazing dairies have a higher potential to become organic and receive organic premiums, assuming that is the direction the farm wants to move toward.

How Does Your Farm Compare?

As you can see in the tables, there is a large amount of variation from farm to farm within the surveyed farms. Your farm may have totally different numbers. To calculate your farm's figures, simply divide the totals of each income and expense category yearly totals for your farm by the total amount of hundred weights of milk sold. (Do not use your DHIA milk production figures).

You can also generate per-cow and per-acre numbers as well by simply dividing same category yearly totals by the total number of milking plus dry cow average for the year or the total number of acres in crops and pasture.

For a form to help guide in your calculations, contact the Penn State Cooperative Extension, Chester County at (610) 696-3500. I also have copies of the complete survey results.

If you are computerized, I also have the data and worksheet in Microsoft Excel 2000.

See tables pages 6, 10, and 20.

Conference Feb. 12-13

QUARRYVILLE (Lancaster Co.) — The eighth annual Southeast Pennsylvania Grazing Conference is scheduled Feb. 12-13 here at the Hoffman Building on the Solanco Fairgrounds.

Sponsored by the Lancaster County Graziers, the meeting theme is "Maximizing Management."

Speakers include Jerry Brunnetti, Dave Forgey, Tim Fritz, Kenneth King, Glen Moyer, Harry Strite, and Duane Hertzler. An open forum will allow those who attend to question the speakers Monday, Feb. 12.

On Tuesday, Feb. 13, a workshop with the speakers on the topics discussed will be featured.

For more information, contact Arden Landis at (717) 529-6644.

Maximizing Management

Monday — Feb. 12, 2001

12:00 Noon Registration — Visit with exhibitors

12:30 p.m. Jerry Brunetti — The Soil Plant And Animal Connection

1:30 p.m. Dave Forgey — Update On The Advantages Of Seasonal Dairy

2:45 p.m. Tim Fritz — Report On Grazing Research

3:00 p.m. Kenneth King — From High Tech To Low Tech

4:00 p.m. Open Forum — Question and answer session with speakers

Tuesday — Feb. 13, 2001

7:30 a.m. Registration — Visit with exhibitors

8:00 a.m. Glen Moyer — Solving The Problems Of Grass Based Management and **Harry Strite** — How My Personal Choices Affect My Style Of Management

9:30 a.m. Break for coffee, milk and doughnuts. Visit with speakers.

10:30 a.m. Dave Forgey — Where Do We Go From Here? — Future Of Grass Farming

12:00 Noon Lunch — Visit with exhibitors

1:30 p.m. Duane Hertzler — Large Herds And The Grazing Advantage

2:30 p.m. Kenneth King — Optimizing Family And Farm Resources

3:30 p.m. Workshop With Speakers

Tapes available for all sessions from Cocalico Cassettes (717) 336-4179.

For more information, contact Arden Landis at (717) 529-6644.

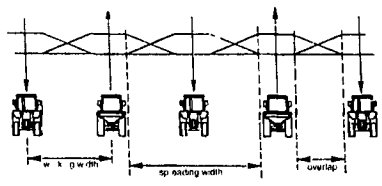
Vicon

GREENLAND

SUPERFLOW FERTILIZER SPREADERS

Vicon **SUPERFLOW SEEDER**

Spreaders are the most accurate broadcast spreaders in the world. The unique pendulum action keeps the spread pattern close to the rear of the machine while at the same time providing a symmetrical pattern on both sides.



Vicon

Seeder spreaders are easily calibrated for extremely accurate performance.

The pattern allows "back and forth" as well as "around and around" operation. The "truncated" pattern offsets inaccurate overlap problems, eliminating streaking.

Frost Seeding Of Forages

Dan Undersander
University of Wisconsin

Frost seeding is broadcasting forage seed on the ground surface while the ground is still frozen in the spring. Frost seeding works very well three to four out of five years.

Frost seeding is a less expensive option of seeding forages for those needing to rent seeders. It is also riskier than seeding with a drill because seed-soil contact is less good. It can result in increased legume percentage but not in uniform stands of the seeded forage. Frost seeding may be acceptable for pasture improvement but not for establishing hay fields.

The optimum is to seed early in the spring after the snow is gone but while the ground is still frozen. The principle is that freezing, thawing, and refreezing that occurs in the soil surface during this time will cause the seed to be incorporated to some degree into the soil to enhance germination.

Most important seed in present to germinate during a cool, moist time period. Frost seeding works best if pasture residue has been removed to allow the seed to reach the soil surface. Residue removal is best done by grazing late the previous fall. Residue can be removed by grazing or burning in the spring but either may delay seeding.

I do not recommend frost seeding on top of snow because rapid snow melting may cause the seed to be washed off the pasture. Frost seeding should be done in March. Earlier seeding will also result in seed loss by birds, rodents, etc.

Seed can be distributed by a tractor-mounted or hand-held broadcast seeder or mixed with fertilizer and applied.

Frost seeding works best for legumes and grasses that germinate rapidly. Legume seeding rates would be two to four pounds per acre for red clover and birdsfoot trefoil. Red clover is the easiest to establish. Ryegrass may be frost seeded at eight to 10 pounds per acre and orchardgrass at four pounds per acre.

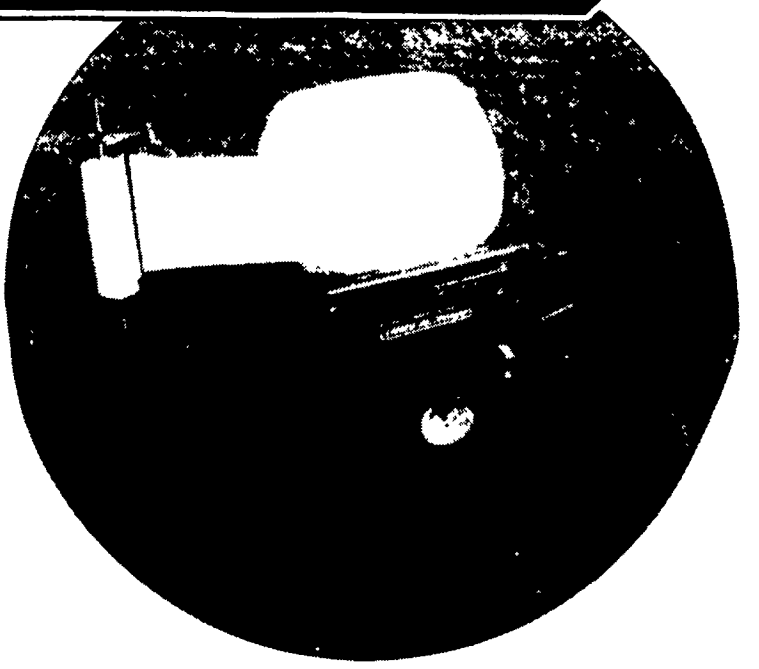
TANCO AUTOWRAP

THE WRAPPER THAT WRAPS BALES OTHERS WON'T

A complete range of Round, Square & Rectangular Wrappers.

Patented advantages like the unique "Deep Cradle" continuous full width belt, and fully supported turntable where four polyurethane wheels provide Tanco's renowned even and balanced operation, even with overweight and misshapen bales. Quality wrapping and quality machines that has made Tanco among the World's leading manufacturers.

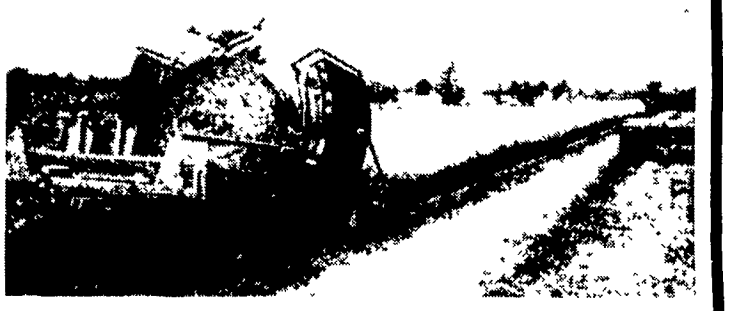


It takes a quality product to do quality work.

TUBE-LINE BALEWRAPPER

For optimum speed and efficiency patented Tube-Line Wrappers are the answer! Tube-Line Wrappers wrap a continuous row of bales. The airtight application of stretch wrap film retains moisture balance as haylage matures and prevents air infiltration. The shrink wrap also prevents wind damage and accommodates variation in bale size and shape without air gaps.

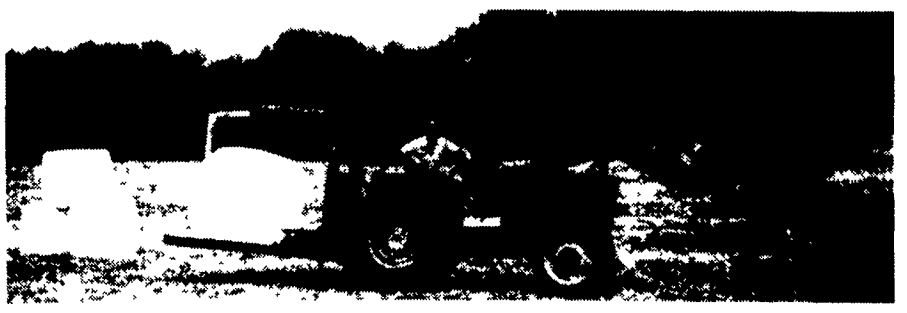
Long stem silage is better used in the animals digestive system. Feeding high quality haylage from wrapped bales can reduce or eliminate feeding grain while retaining or increasing weight gains or milk production.



Tube-Line wrappers for all round bales or large square bales are available in either manual or fully automatic models.

AG WRAP BALE WRAPPER

Wraps Bales up to 5 ft. x 5 1/2 ft.



The EC04-5 Pull Behind Wrapper
For Use On Small Tractors

- 3-Point Hitch
- Hydraulic requirement 4 GPM – 2 remotes
- Pre-stretcher for plastic
- One-man operation
- Wrap on the move
- Transport bales to storage
- Picks bale up, wraps them all hydraulically
- Built in U.S.A.

Capitol Region Agronomy Team Report

Del Voight
Lebanon County
Agent

The capitol region Silage, Forage, and Pesticide Update Exposition will be conducted Feb. 23 at the Lebanon Exposition Center.

The first-of-its-kind exposition to combine the delivery of silage and forage production information with pesticide credit needs will start with registration at 9 a.m.

The new format will offer a general session, giving tips on the proper application of pesticides focusing in boom height. After this will be breakouts.

Breakouts will split the group into small components to encourage discussion and the ability to cover many more topics.

Al Shoener, Schukyill County Agent, will discuss pricing farm operations and products. He will answer the questions of how to determine prices for high moisture corn, corn silage, haylage and other custom farm practices.

Paul Craig, capitol region forage agent, will discuss forage legume-/grass considerations. He will discuss species selection for soil type, establishment suggestions, and quality preservation.

Molds and mycotoxins will be the focus of Dr. Arlen Mills, extension veterinarian, with specifics on identification and management of mycotoxins in ensiled products and when moving forages on farms.

Narrow rows, population, Roundup hybrid performance, and other silage production research updates will be delivered by John Rowehl, capitol region corn and small grain extension agent.

Del Voight, capitol region pest management agent, will offer a core credit dealing with planter applications of pesticides, focusing on applications of insecticides for control of rootworm, seed corn maggots, and diseases.

Mark Goodson, capitol region soils agent, will discuss managing soil fertility in a corn/alfalfa rotation with manure in addition to reviewing nutrient management requirements.

Glenn Shirk, Lancaster County dairy extension agent, will be discussing managing forage feedout and ration considerations. Storage structures, feedout rate and particle size, silage/haylage or straight silage ration considerations will be discussed in his session.

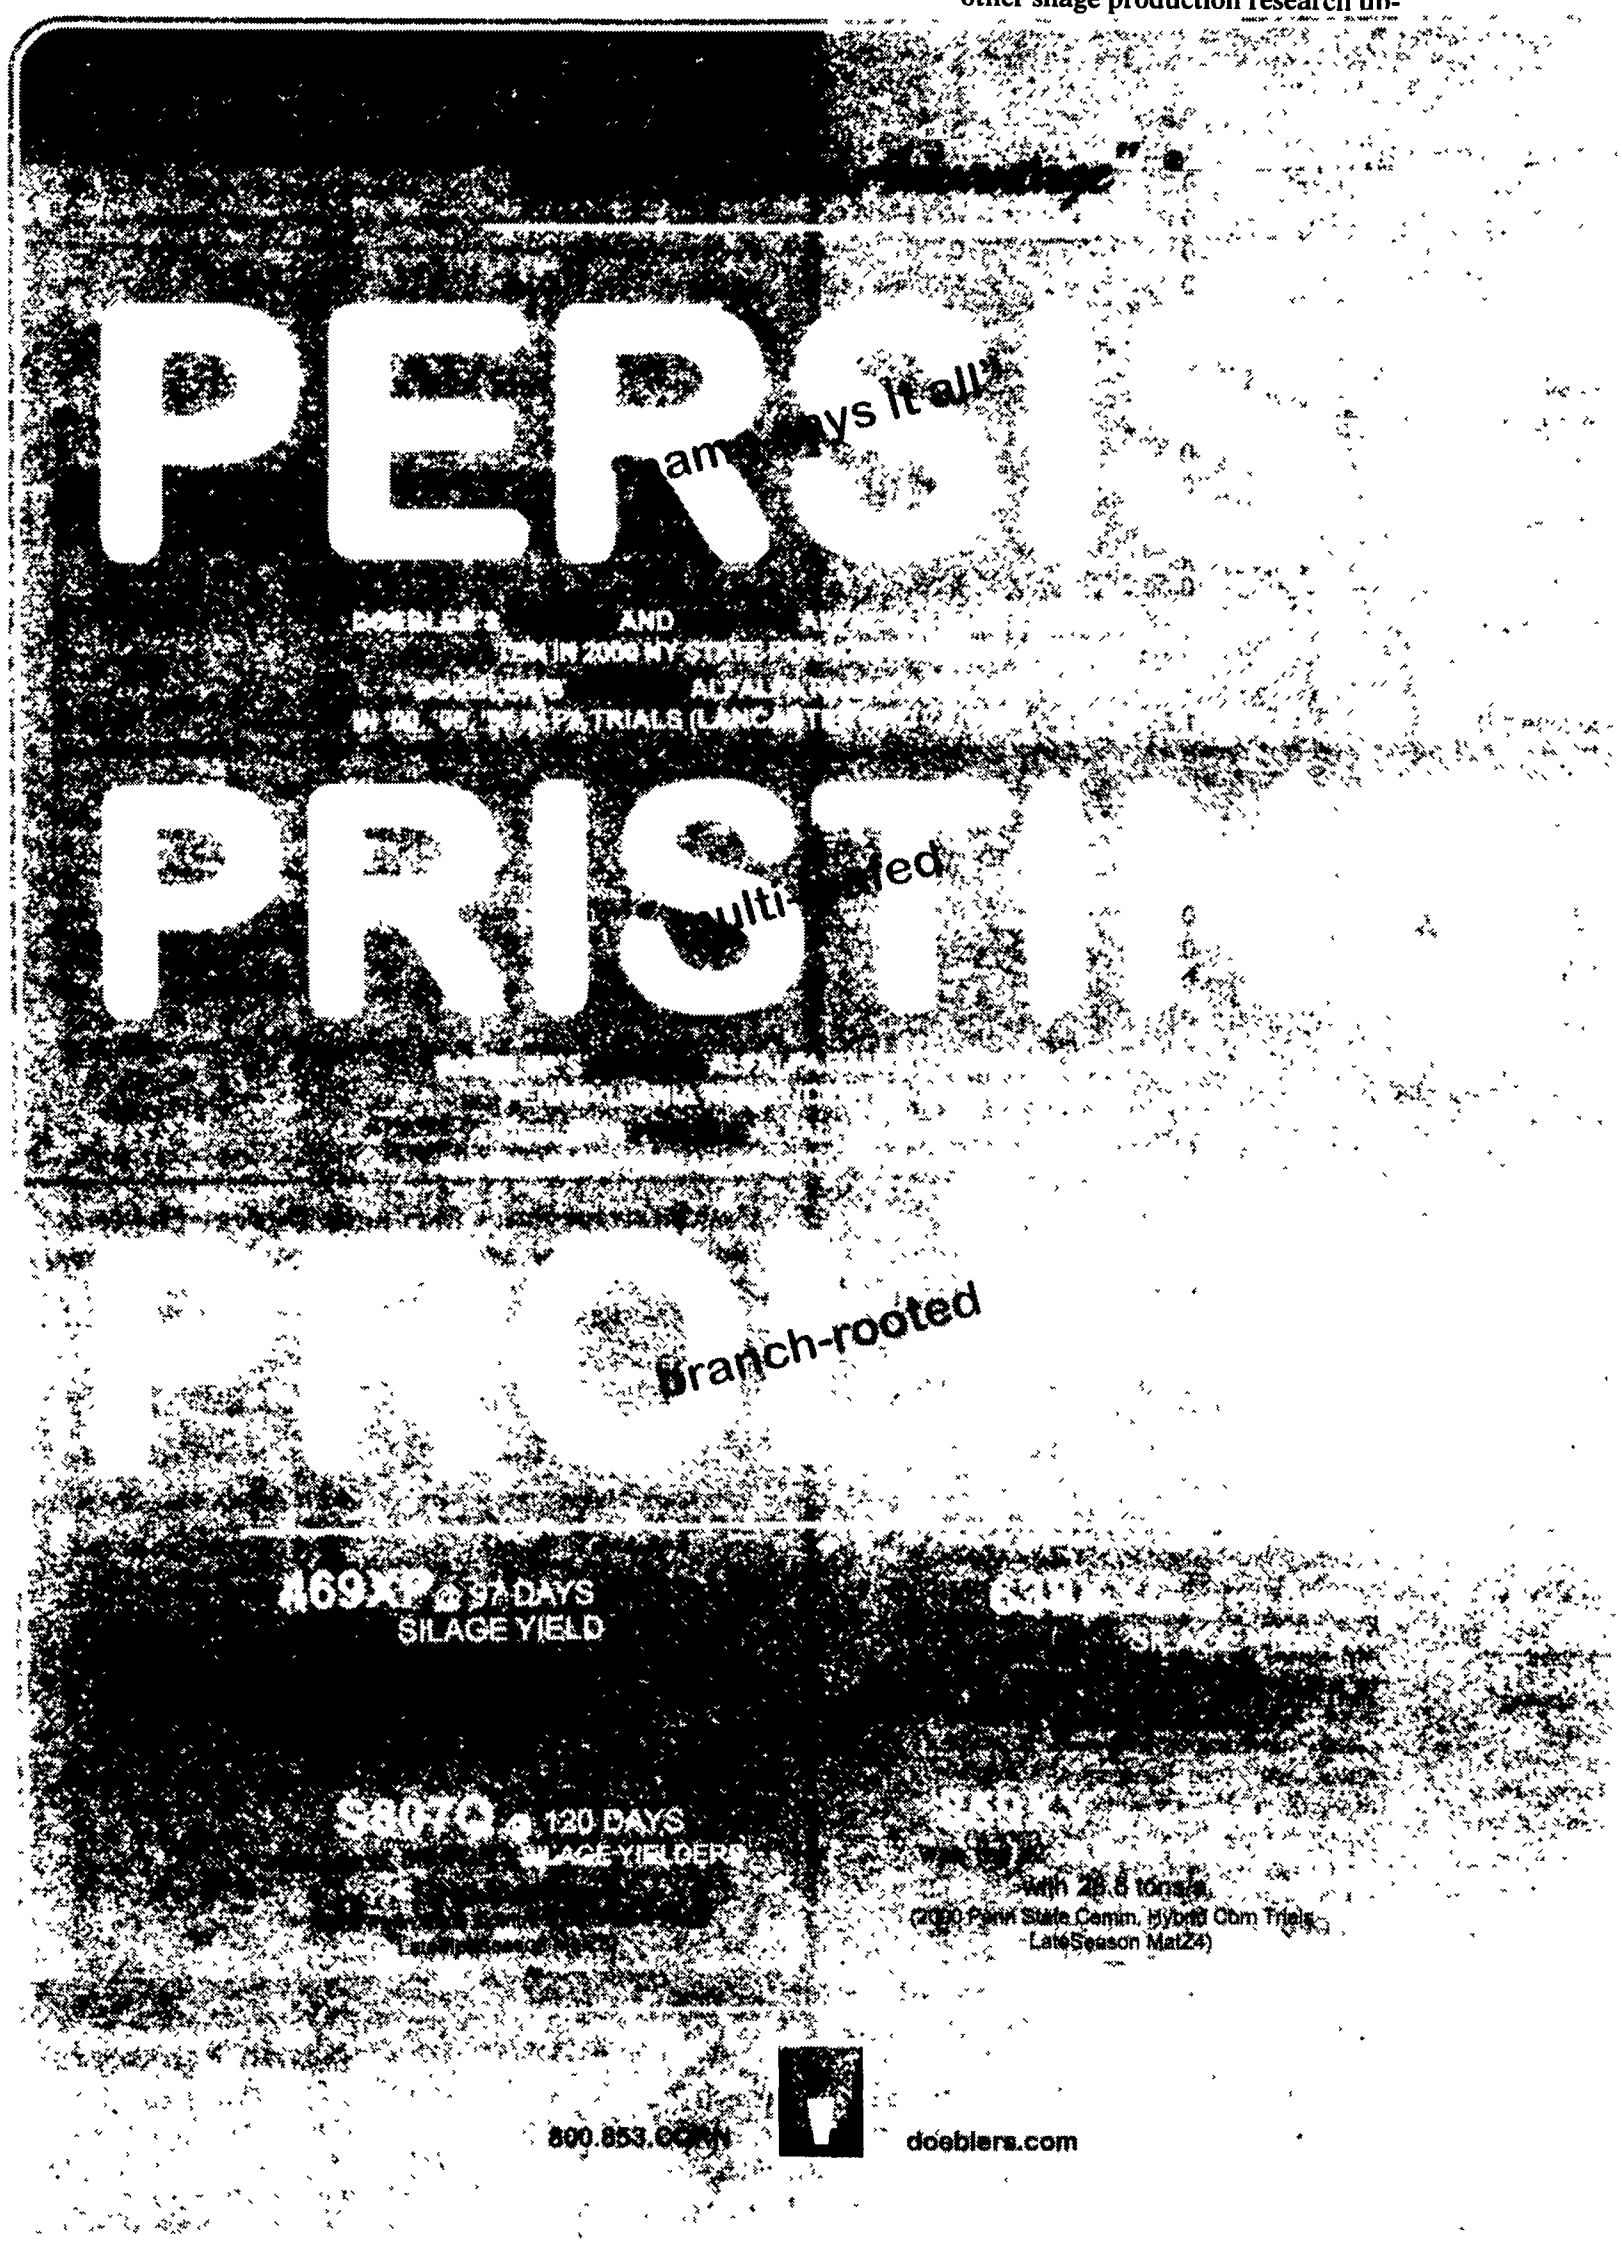
Three farm systems will be highlighted to show the various ways to manage feeding. Roland Freund, regional farm management agent, will be offering an estate planning discussion group over lunch to focus on the best transfer of farm ownership. He will detail two case studies of the seriousness of making poor choices in this area.

In the afternoon, the issue of using Bt corn and other technologies wisely to protect from insect resistance will be discussed to better manage new emerging technologies. In addition, time will be devoted to delivering information on what's new in herbicide and insecticide choices for 2001.

This all-in-one-day program would not be complete without handouts. Factsheets written by Penn State specialists on corn silage hybrid performance, soybean varieties, small grain performance tests, and forage performance tests will be available.

There will be no fee for attending this program. Umberger's of Fontana and numerous exhibitors have graciously agreed to defray costs of this program.

Please plan to attend this first-ever event by calling the Lebanon County Penn State Cooperative Extension Office at (717) 270-4391. We look forward to seeing you.



PFGC Accepts Memberships

HERSHEY (Dauphin Co.) — Pennsylvania Forage and Grassland Council (PFGC) has announced membership rates for 2001.

The Council, with your membership and support, can accomplish much toward a better forage industry, environment, and community.

It's a big challenge and the PFGC needs your help. By becoming a member now, PFGC can serve an even more active role in support of the forage industry.

The PFGC, formed in 1960, is made up of individuals and organizations that are interested in forage and grassland-based agriculture. The PFGC is dedicated to the production and utilization of quality forage and grassland.

The PFGC works in a variety of ways to promote the industry, through publication of Pennsylvania Forage and Grassland News, through the publication of ***Foraging Around***, and sponsoring individual workshops, training events, field days, Ag Progress Days, leadership, and other activities.

Every member receives the Pennsylvania Forage and Grassland News, the Hay and Forage Grower magazine, and a PFGC membership directory.

So to become part of a growing industry, use this membership form included here to sign up now.

Life memberships of $150 per member will be accepted until Dec. 31, 2001
Make check payable to Pennsylvania Forage and Grassland Council.
Detach this application and mail along with your check to Richard Hann, Executive Director, PFGC, P.O. Box 355, Hershey, PA 17033.

❖ GRAZING BITS ❖

Considerations When Choosing Optimum Pasture Land

When you were deciding where to create pasture on your farm, what were you thinking about? What land characteristics were you looking for?

If you are like many farmers, you decided to take the land that was too rocky or too steep to raise a good corn crop, and establish the pasture there. If the ground is of poor quality for traditional crops, it is of poor quality for pasture also.

If your goal is to use pasture land as a high quality forage source for your animals, you need to use land that has fairly high productive capabilities. Do not think of it as taking good land out of crop production, but think of it as changing the way in which the crop is harvested. This good land will produce much higher yields of forage compared to marginal land, and through the implementation of well-planned grazing management, you will still obtain a very high harvest efficiency but at a much reduced cost.

For more information on grazing and pasture management, contact your local cooperative extension office, conservation district, Natural Resources Conservation Service, or refer to "Prescribed Grazing and Feeding Management for Lactating Dairy Cows," published by the NY State Grazing Lands Conservation Initiative, January 2000.

Working for the things we want – Better yields. Technology that pays. And the chance to go on calling our own shots.

Nothing Yields Like JADE™ II

See What We Mean?

JADE II LEADS THE WAY	JADE II HAS A 7% AVERAGE YIELD ADVANTAGE IN 1,387 HEAD-TO-HEAD TESTS, 1993-1999.	
1st out of 107 Arlington, WI (1993-96)	**20%** more than WL323	*(41 comparisons)*
	7% more than Pioneer 5454	*(91 comparisons)*
1st out of 81 Ames, IA (1993-96)	**7%** more than DK133	*(113 comparisons)*
	9% more than Total+Z	*(54 comparisons)*
	7% more than Rushmore	*(70 comparisons)*
2nd out of 31 Ithaca, NY (1996-99)	**6%** more than TMF Multiplier II	*(50 comparisons)*
	18% better than Evolution	*(35 comparisons)*

In one yield trial after another, JADE™ II alfalfa comes out on top. JADE™ II delivers the same outstanding yields as original JADE™ with even higher feed quality. You'll also get excellent winter-hardiness, impressive re-growth, and an outstanding disease and insect package.

PFGC ❖ INDUSTRY CORNER ❖

MACHINERY TRAFFIC SUBSTANTIALLY REDUCES ALFALFA YIELDS

Jim Moutray
America's Alfalfa

Recent U.S. studies show that traffic on alfalfa fields reduces yields much more than anyone previously thought.

A few years ago, faced with the problem of soil types that cause early stand thinning under machine traffic, researchers in northern Japan had the idea to try alfalfa developed in America under continuous grazing by cattle. They theorized that alfalfas that would withstand abuse from hoof traffic associated with constant grazing throughout the growing season might maintain stands longer.

They obtained some interesting results after three years of running a tractor over the plots after each harvest to simulate cutting, raking, and chopping. These are:

- In the third year of the test, the American grazing tolerant varieties yielded up to 250 percent more than the regular varieties bred in the U.S.
- At the end of the test, the grazing tolerant varieties had three times as many plants per square foot left the following spring.
- Stands of the grazing tolerant varieties were good enough to keep for another year's production of dairy quality hay, while stands of the regular varieties had large holes with weed invasion and were too poor to keep.
- The grazing tolerant varieties America's Alfalfa develops are also traffic tolerant.

In 2000, the University of Wisconsin initiated a test of 20 varieties in duplicate side-by-side research plots. In one set of plots, a tractor was driven over each row three times, five days after each harvest. The other set of plots was harvested without running over them.

The average yield reduction in the seeding year was more than 40 percent, with typical on-farm wheel traffic.

In this test, America's Alfalfa grazing and traffic tolerant varieties were the highest yielders with or without traffic.

These plots will be continued for two more years. In 2001 and 2002, we expect a large yield difference between the traffic-tolerant varieties and those developed without traffic (frequent hoof traffic and defoliation) as occurred in the earlier study.

This "real world" testing is revealing the importance of wheel traffic on fields. What can be done about it:

- Strongly consider varieties that are traffic tested.
- Avoid unnecessary trips across the field by combining operations when possible.
- Finish driving on fields as soon as possible after cutting. Longer delays will damage regrowth more.

Wedge-shaped cutter bar

Well sealed gears and bearings

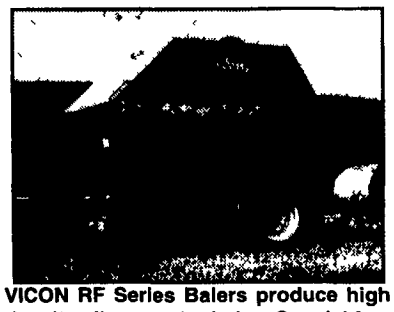
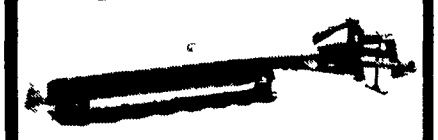
FIXED CHAMBER ROUND BALERS


VICON RF Series Balers produce high density silage or dry bales. Special features assure consistent bales year after year of use.

Model Available	Bale Size	Pick-up Width	Binding System
RF 121	4'x4'	66'	Twine
RF 122	4'x4	83'	Twine, Net, Both
RF 122 OC w/Cutting System	4'x4'	83'	Twine, Net Both

Vicon
CM & DMP MOUNTED DISC MOWERS


- Cutting Width from 5'8" to 10'6"
- Unique 3 Blade Discs perform well in all crops
- For tractors as low as 36 HP
- Flail Conditioner models available, 7'10" and 9'10" only

NEW RV 157/187 VARIABLE CHAMBER ROUND BALERS

VICON RV SERIES produce consistent high-density bales in virtually all crops and conditions Variable chamber allows for smaller bales in silage and larger in dry hay or straw Opitcut Cutting System also available

Model	Bale Size	Pick-Up Width	Binding System
RV 157	4 x2 to 4 x5	56"	Twine, Twine & Net
RV157L	4'x2' to 4'x5'	84"	Twine, Twine & Net
RV187	4'x2 to 4'x6'	56"	Twine, Twine & Net
RV187L	4'x2' to 4'x6'	84"	Twine, Twine & Net

PFGC ❖ SPECIAL REPORT ❖

SAMPLING HAY FOR ANALYSIS

Bill Knepp
Ag and Natural
Resources Education Coordinator

Hay yields were certainly an improvement over last year's drought, but I suspect that hay quality is lower this year.

The lack of hay making weather either delayed harvest, or the hay was rained on which certainly reduces quality. Forage testing is a tool that enables supplementation of protein, energy, or minerals to make up the deficiencies in our hay crop.

Forage analysis reveals the crude protein content, acid detergent fiber, neutral detergent fiber, and relative feed value to name a few.

• Crude Protein: Laboratories measure the nitrogen (N) content of the forage and calculate crude protein using the formula: CP=%Nx6.25. Crude protein will include both true protein and non-protein nitrogen.

• Acid Detergent Fiber: This value refers to the cell wall portions of the forage that are made up of cellulose and lignin. These values are important because they relate to the ability of an animal to digest the forage.

• Total Digestible Nutrients: As the ADF increases, TDN decreases.

• Neutral Detergent Fiber: the NDF value is the total cell wall, which is comprised of the ADF fraction plus hemicellulose. Neutral detergent fiber values are important in ration formulation because they reflect the amount of forage the animal can consume.

• Dry Matter Intake: DMI decreases NDF increases.

• Relative Feed Value: RFV is an index that combines the important nutritional factors of intake and digestibility. It has no units, but the index allows comparisons of legume, grass, and legume-grass forages.

A forage analysis is only as good as the sample sent to the lab. Samples must closely represent an entire "lot" of forage. A "lot" of forage harvested from the same field at the same cutting and maturity within a 48-hour period. The most important consideration when identifying the "lot" is uniformity.

Hand samples do not provide consistently reliable results. Sometimes a handful of leaves is collected. More often leaves are stripped from the stem and left behind. Do not use flakes of hay. A flake may not even represent the bale it was selected from due to internal variation. Also, flakes are too large to submit for testing. Using a core sampler can reduce both variability and sample size. Core samplers usually have sharpened or serrated tips. Keep tips sharp to cut through hay to prevent selective sampling. Many core samplers can be operated with an electric drill or a hand brace. Run the drill at slow speeds. High speeds heat the probe and can damage samples.

Select 20 or more typical bales from each "lot." If the probe is 18-inches long or longer, 15 large round bales should be adequate. Collect one sample from each bale by coring straight in from the center of the end of square bales and from the wrapped circumference of round bales. When sampling hay to be fed on your farm, avoid sampling decayed or moldy hay or other portions of hay that will be discarded or would likely be refused when fed to animals free choice. However, include deteriorated materials if the hay will be ground, sold or purchased in order to best describe all the hay. Place the entire sample into a plastic bag and seal tightly.

Most feed companies will provide sampling tools and mail your forage for nutrient testing.

Silage, Hay Preservation Publication Available

ITHACA, N.Y. — Forage crops — legumes, grasses, and corn silage — form the basis of the nutritional programs on dairy, beef, and sheep farms.

From the moment that crops are cut until they are delivered to animals, biological processes take place that decrease their quantity and nutritional quality as feeds.

"Silage and Hay Preservation," NRAES—5, provides a wealth of practical information and scientific background on managing forage preservation to reduce losses and quality changes ($8 plus S&H/sales tax, 53 pages, 1990). Proper management results in more efficient production and greater farm profits.

First published in 1990 by the Natural Resource, Agriculture, and Engineering Service, "Silage and Hay Preservation," NRAES—5, was awarded a blue ribbon in the 1991 ASAE Educational Aids Competition. The 53-page publication is divided into three sections: The Biology of Silage Preservation, Preservation of Hay, and Additives for Silage and Hay Preservation. In the first two sections, the processes that affect forage quality are described, and management practices to control these processes are discussed. The additives section describes their impact on forage preservation and includes a frank assessment of the usefulness of eight categories of additives.

"Silage and Hay Preservation," NRAES—5, was written by R.E. Pitt, director of faculty development, Bryant College (formerly professor of agricultural and biological engineering, Cornell University).

"Silage and Hay Preservation," NRAES—5, is available for $9 per copy plus shipping and handling from NRAES, Cooperative Extension, 152 Riley-Robb Hall, Ithaca, NY 14853-5701. Shipping and handling for one copy is $3.75 within the continental U.S. New York residents, add eight percent sales tax (calculated on both the cost of publications and the shipping and handling charges.

For more information or a free publication catalog, contact NRAES by phone at (607) 255-7654, by fax at (607) 254-8770, or by e-mail at nraes@cornell.edu. To learn more about NRAES, browse through our entire catalog, and order books *online, visit our web site at www.nraes.org.*

Forage Analysis Superbowl Winners Announced

MADISON, Wis. — Visitors from around the world have seen, touched, smelled and even tasted the winning entries of hay, haylage, balage and corn silage at the 2000 World's Forage Analysis Superbowl.

Forage growers from across the U.S. and Canada vied for forage quality awards by entering their high quality samples that were tested and judged to determine final placing. Dairy producers know that quality forage production is the backbone to their dairy profitability.

The close ties of premium forages and dairy production make the forage quality emphasis a natural for the World Dairy Expo. This year the Forage Superbowl was not just a contest, but also an opportunity for producers to hear experts speak about latest findings that could improve forage and milk profitability.

Visitors had opportunities to ask questions on how this latest research could benefit their operation. In addition, the exceptional forage contest entries on display were great specimens used as examples throughout the presentations and questions.

Each contest entry was analyzed for dry matter, crude protein, acid and neutral detergent fiber, insoluble crude protein, estimated digestible dry matter, and relative feed value.

This year marks the 16th Annual World's Forage Analysis Superbowl. Since its beginning, Schoessow Inc., has been a prize sponsor of the forage contest.

This year's world's champion forage producer title and prize was presented to Daniel and Ruth Kamps from Darlington, Wis. with a commercial hay entry. The prize for earning the world's champion forage producer is one year free use of a skid-steer loader sponsored by New Holland North America, Inc.

Grand champion award winners included:

- First-time entrant: Ken Harms, Snowflake, Manitoba, Canada. Prize: Arrow Front Feeder Wagon sponsored by S.I. Feeders, Div. of Schoessow, Inc.
- Dairy hay: Wayne Harris, Lister, British Columbia, Canada. Prize: Forage Box sponsored by H & S Manufacturing Co., Inc.
- Dairy haylage: Jeanquart Farms, Casco, Wis. Prize: Badger Forage Box sponsored by Miller St. Nazianz.
- Dairy corn silage: Wiese Brothers Farm, Greenleaf, Wis. Prize: 3030 Reel Auggie Mixer sponsored by Knight Manufacturing Corporation.
- Commercial hay: Freeburg Hay Co., Gayville, S.D. Prize: BiFold Hi Capacity Rake sponsored by H & S Manufacturing Co., Inc.
- Commercial balage: Daniel and Ruth Kamps, Darlington, Wis. Prize: Balage Wrapper sponsored by Hay-Wrap, Inc.

PFGC Announces Award Recipients

HERSHEY (Dauphin Co.) — The PFGC announced the recipients of awards for excellence.

The PFGC Awards Program was established to recognize individuals in Pennsylvania who have made an outstanding contribution to some aspect of forage and grassland improvement in the state. Awards are made annually when there is a worthy candidate.

Presentation of the awards will be made Feb. 28 during the Pennsylvania Forage and Grazing Conference in Grantville. Those who will be recognized are highlighted here.

PFGC Special Award

The Special Award is the highest recognition given by PFGC. It is presented to an individual or company that has made a major contribution directly to the Pennsylvania Forage and Grassland Council as well as an outstanding contribution to Pennsylvania's forage and livestock industry and/or conservation farming. The recipients' contribution may have been in production agriculture, industry, research, extension, teaching, or other public service.

Mike Galbraith from Martinsburg is this year's recipient of the PFGC Special Award. Mike has been a very dedicated and strong supporter of the PFGC and its many programs. He has served the PFGC as board member, chairman of numerous committees, and as president.

Under Mike's leadership from 1994 to 1998, the number of industry members in the PFGC increased dramatically.

Mike and his wife April were also coordinators of the PFGC annual picnic for two consecutive years. As district manager of Youngs/Cargil's hay preservative division, he has championed the cause of growing, harvesting and preserving quality forages. Considering the many contributions that Mike has made to the PFGC, both past and present, it is an honor to recognize him as the recipient of the PFGC Special Award.

Research/Extension/ Teaching Award

This year's Research/Extension/Teaching Award recipient is Duane Pysher from Wernersville. In his role as pasture resource specialist with the USDA — Natural Resources and Conservation Service, Duane has provided outstanding leadership, direction, support, and innovation for grazing enthusiasts across Pennsylvania and the northeast U.S.

Duane has used many methods to promote grazing, including individual assistance, farm visits, classroom instruction, committee work, and team building. He has pursued educational and practical knowledge to increase his understanding of grazing principles.

Unselfishly, Duane has provided training for farmers, bankers, veterinarians, agency staff, animal scientists, and the general public. Participants report that they have learned and applied management tools acquired through Duane's educational programs. Duane's educational efforts in support of forages and farmers truly make him deserving of this year's PFGC Research/Extension/Teaching Award.

Forage/Conservation Farmer Award

For nearly 15 years, Bob and Kate Boyce have been paying very close attention to soil conservation practices while developing a 70-head, Angus cow-calf through finishing operation near Carlisle. The beef operation utilizes intensively rotated pastures as its main feed source.

The paddocks, laneways, and water system were designed and installed to minimize the impact of the cattle on nearby stream banks and on the soil in the paddocks.

As the grazing system continues to develop, and evolve Bob and Kate have experimented with many forage species trying to find the perfect match between the environmental limitations of their farm and the needs of the cattle.

Low precipitation frequently limits cool season grass growth in the summer on the Boyce farm. Consequently, this has been a major focus of their search for productive forage species.

The Boyces have also been extremely supportive and helpful to other farmers wishing to incorporate more forages into their farming system. They have hosted field days and Boyce continues to be a vocal supporter of forage agriculture to improve soil and water conservation.

In 1999, Boyce took the initiative and gathered the necessary signatures to establish an "Ag Security Zone" in his township. Bob and Kate's efforts in teaching others about conservation by example and implementing the many conservation practices on their farm makes them deserving of the PFGC's Conservation Farmer Award.

Outstanding Pasture Producer Award

• Dean Madigan, Bradford County, raises dairy replacement heifers on his 275-acre Bradford County farm using an intensive grazing system. His home farm is divided into 15 semi-permanent paddocks that are subdivided as necessary during the grazing season. Madigan tries to maintain between 200-250 animals in various stages of growth on the predominately grass-clover pastures. In addition to his grazing skills, Madigan does an exemplary job of producing and storing round bales. He grades and prepares the storage site and then uses tarps in a timely fashion to preserve as much feed quality as possible. Madigan has been a long-time supporter (and "charter-member") of the Bradford County grazing network and has distinguished himself as a valuable contributor to that organization. He regularly attends planning meetings and the bi-weekly pasture walks during the summer. He has hosted several events on his farm including a well attended meeting this past summer, featuring Jud Heinricks from the Penn State Dairy and Animal Science Department. Madigan was also a speaker at the Penn State Grazing and Forage Conference in 1999.

• Ed and Sandy Swope, Fulton County, own and operate Morotai farm in Fulton County. They converted 115 acres of cropland into pasture and implemented and intensively graze 60 Holstein dairy cows and 45 Holstein heifers. Along with the cattle, they also graze 15 horses, 20 goats, 20 doe rabbits and their flock of 100 chickens.

The diversity of animals grazing these pastures maximizes utilization but also puts considerable stress on the pasture plants.

The primary forage species in their pastures are orchardgrass, perennial ryegrass, and clover. They frost seed clover and clip pastures as necessary. Morotai Farm was the first in the county to install a solar water pump that supplies water to a majority of the paddocks. They are using the Nutritional Balance Analyzer (NUTBAL) to help them understand the value of the pasture quality and to alert them of potential nutritional deficiencies.

(Turn to Page 18)

IT'S ABOUT TIME

To Frost Seed Alice White Clover

Alice is a tall large leafed white clover developed for exceptional yields of palatable high quality forage. Alice clover has shown tremendous nitrogen fixing benefits for the grass (especially ryegrass) that grows with it. We've had many comments that the pastures with Alice stay green longer into the summer. Alice has greater stolen density than most ladino type clovers allowing for better persistance under grazing. Recent studies show an increased dry matter intake of 2 pounds per cow per day if clover is included in the pasture.

SPECIAL REPORT

Sheep And Pasture Management
Thomas W. Calvert
Producer

We can argue about which animal is the best converter of forage to a usable food and fiber, but certainly the sheep is one of the best. With good sheep and pasture management, we can produce a very desirable meat product that will grade choice directly off pasture.

As with almost all enterprises, management is the key to success. When you are working with a combination of plants and animals, one thing to keep in mind is that the words "always and never" hardly ever apply. You, in your location, with your own set of circumstances, may find some, but don't be surprised when something quite unusual or different than the stereotype happens.

Good or proper pasture management is the same, regardless which animals we are using to harvest the forage. Good animal, in this case sheep, management is basically the same regardless of where we live or what we use as feed. In either case, there is a great need to know as much as possible about the sheep and it needs and equally as important to know as much as possible about the management of the pasture/forage plants.

In other words, husbandry of both the plant and the animal is critical to having a successful combination. And don't forget marketing. We usually need to sell at a profit.

Some general characteristics of sheep that need to be considered:

- Sheep will tend to graze the plants very close to the ground, therefore making it hard to maintain the minimum grazing height.
- Sheep will also prefer shorter turn in heights (six to 10-inches instead of 10 to 14).
- Sheep prefer dryer weather conditions. Usually be healthier in hot and dry or cold and dry than hot, warm, or cool and damp. Warm or hot and damp will increase the problems related to internal parasites and external parasites such as wool maggots. Damp weather is very hard on feet. Warm and damp can be very damaging to wool quality.
- Internal parasites are a problem with most livestock in humid areas, but it is an extremely important item with sheep. Keeping close watch on parasite loads in the flock is an on going concern and must be managed. Proper rotation can be an aid. You need to understand the life cycle of the parasites.
- Sheep have a higher tolerance for or to electric shock. A higher voltage is required on the electric fence plus a good training program. A voltage of 4,000 or more.
- Sheep usually prefer, not always, smaller or finer stemmed or leafed plants than cattle or horses.
- Sheep can be used to graze more fragile soils and steeper slopes than cattle or other larger animals.

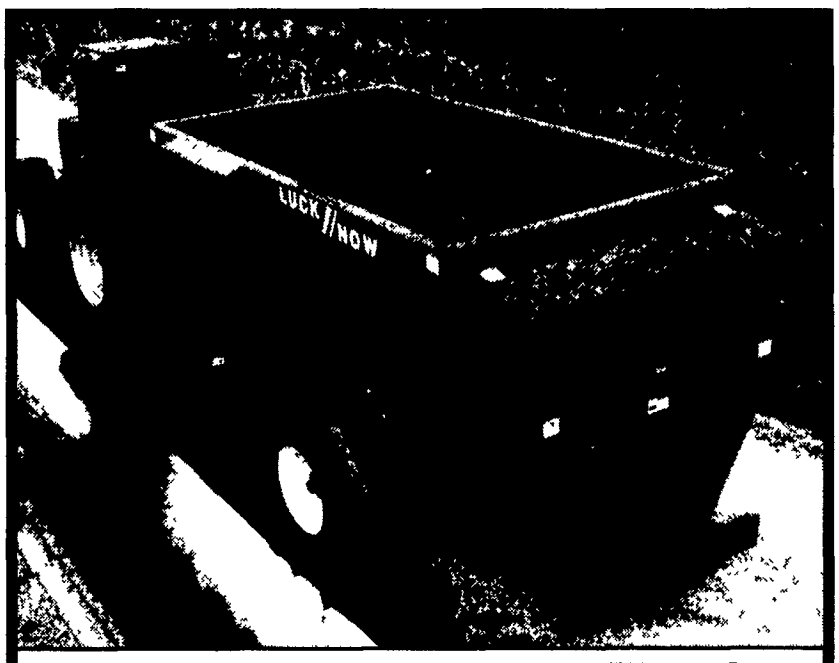
PFGC Announces Award Recipients

(Continued from Page 17)

The Swopes have held several pasture walks on their farm and regularly attend other pasture walks and educational opportunities around Fulton County. They are excited about assisting others needing help or having questions about grazing.

- Jeff and Don Byerly, Union County, established a 60-acre intensive grazing system in 1994 using marginal cropland on one of their farms. The system is used for their brood cowherd that normally consists of about 55 cows. The grazing system is set up with approximately 30 paddocks and involves frequently rotating the herd from paddock to paddock. The grazing system has been a sound investment for their farming operation.

Before the grazing system was established, the farm housed the brood cows in a dry-lot system. The Byerly's have also been supportive of extension education efforts and recently hosted an on farm pasture and grazing management meeting that was attended by more then 50 people.



LUCK//NOW MIXER FEEDERS
"P" SERIES

Since 1979 LUCK//NOW Mixer Feeders have been recognized as one of the most dependable and strongest built mixers in the field.

To enhance its existing line of Mixer Feeders LUCK//NOW introduces the *"P" Series* of Mixer Feeders with six models ranging in size from the Model 300 with a mixing capacity of 310 cubic ft., to the Model 900 with a mixing capacity of 900 cubic ft.

The Large diameter augers in all the *"P" Series* Mixer feeders are capable of giving the mix required, from rations with well cured, long stemmed legume-type hay, to mixes with green grass, and mixes with silage and commodities. Better milk production, better weight gains and greatly improved animal health are just some of the results of a finely-tuned feed ration.

Paragon BR alfalfa

You may be asking, "What does **BR** mean?" **BR** stands for a **Branched Root** characteristic in alfalfa. **Chemgro Seeds Paragon BR** is an alfalfa with a branching root system. In tough wet conditions, **Paragon BR** will utilize a branching root system in poor areas. A taproot is utilized under normal conditions. **BR** means longer lasting stands of alfalfa in fields with less than perfect soil conditions. More of the root system stays above the water table, better securing the plant in the soil when freezing and thawing occurs. This branched rooted trait will adjust accordingly as the moisture stress intensifies. **Paragon BR** is a must for those uneven fields with low wet areas. Places where conventional alfalfas tend to die early, **Paragon** will provide you with high quality, even stand of alfalfa for a full four years. **Paragon BR** is a fall dormancy 3 alfalfa, with an excellent winter hardiness of 1.6. It is well adapted to the soils, conditions and diseases we face here in the Northeast.

❖ PASTURE PONDERINGS ❖

Duane E. Pysher
Grassland
Management Specialist
Natural Resources
Conservation Service
Harrisburg

In the February 2000 issue of *Foraging Around*, I interviewed Joe Vogel of the Pennsylvania Grazing Lands Conservation Initiative (GLCI). At that time, the Coalition was organized under the name of the Grazing/Forage Lands Conservation Coalition. They have since decided to do business as the GLCI in Pennsylvania. This will identify Pennsylvania with the National GLCI movement to promote grazing as a viable system with great economic paybacks for livestock producers.

Last year Joe and I discussed the role of the GLCI and some of their proposals for grazing programs in Pennsylvania. During the past year, they were very active with grazing education programs for many segments of the grazing community.

They conducted seminars for agricultural lenders and accountants to focus on the economics of management intensive grazing (MIG). They also conducted several other field days for dairy, sheep, and beef producers and have planned more of these for 2001.

The Pennsylvania GLCI has scheduled four quarterly meetings for 2001 and have put together an aggressive plan of work for the year. One of the new programs announced at their last quarterly meeting was a minigrant program for grazing education projects. I helped the committee develop their project application guidelines and will discuss some of the provisions of the program.

This minigrant program is being offered to grazing groups or sponsoring agencies who are involved in grazing programs in Pennsylvania. The idea behind the grants is to provide a source of funds to carry out projects of an educational nature. Projects can range from field days to seminars, from videos to booklets, and many other projects in between. Projects will be evaluated on their individual merits by the subcommittee and funds will be awarded accordingly. An applicant may receive up to a maximum established by the committee of $200 per project. This program is designed to provide funds for actual project costs and not to supplement salaries or administrative costs.

The committee has prepared a rather simple application form that must be completed in order to request funding. It is not technical or complicated because the GLCI is interested in accomplishing grazing education projects as opposed to finding out if an applicant can read and follow a complicated application procedure. A final report on their project is required as well as sharing whatever products may be produced. This final report is also very simple to prepare and will not require a vast amount of time. The GLCI is interested in the results of each project and these reports will provide them with a way of being able to share products and ideas so all of Pennsylvania can benefit.

Copies of the grant application have been mailed to all county conservation districts, cooperative extension offices, Natural Resources Conservation Service, and county grazing groups in Pennsylvania. If you are a member of a group that may not have gotten an application, you can contact me and I will be happy to provide you with a copy.

The GLCI is also working on several other ideas for 2001, including a published speakers bureau listing of graziers who could come to local meetings to talk about various grazing-related topics. They also have planned another round of seminars this fall for agricultural lenders and accountants to deal with the economic issues of grazing.

The GLCI is cosponsoring the three grazing conferences that will be held in Pennsylvania in spring. There are also plans to hold several different field days during the 2001 grazing season. Watch for details on these upcoming events.

Speaking of grazing conferences, there are three this month that feature the same cadre of core speakers. I am referring to the Northwest Grazing Conference, the Pennsylvania Grazing and Forage Conference, and the Bradford and Tioga Grazing Conference. The dates for these conferences are Feb. 27, Feb. 28-March 1, and March 2, respectively. That's right around the corner, so you don't have much time left to get registered.

If you would like additional information on grazing, stop by any of our local county NRCS offices and discuss your needs with them. If you need a minigrant application or conference registration information, give me a call at (717) 237-2221 or write to me at NRCS, One Credit Union Place, Suite 340, Harrisburg, PA 17110-2993. I will be at the grazing conferences and hope to see you there.

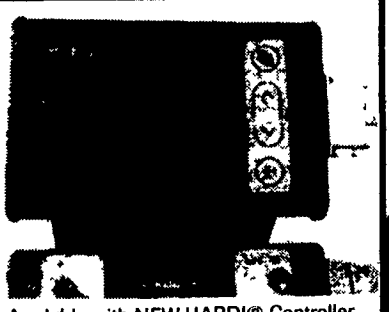
Until next time, *happy grazing*!

COMMANDER Series Trailer Sprayer

Sets the industry's standard for precision, efficiency and safety

Features

> **750, 875 and 1200 gallon tank sizes**
> **HARDI® Paralift™ System - boom height adjustment**
• Fast and friction free adjustment, providing up to 88" of crop clearance
> **Tank design optimizes agitation for uniform mixture**
• Centrally located sump empties tank completely
> **HARDI® Flush and Rinse™ System (optional)**
• Flushes control unit, pump, filters, boom lines and main tank
• Mounted under main tank, providing sprayer stability and accessibility for filling
> **HARDI® Color-coded Manifold Valve Control System**
• Controls sprayer functions quickly and easily
> **High ground clearance - 27"**
> **HARDI® Self-priming Diaphragm Pump**
> **Eagle™ & Force™ Booms with Patented Self-stabilizing Suspension**
• Provides smooth cushion ride and level boom for high speed no-till spraying
• Boom widths from 45' to 120'
> **HARDI® Single Axle Suspension available for 875 & 1200 Series Sprayers**



Available with NEW HARDI® Controller 2500 or HARDI® Monitor 1500 (connects directly into existing HARDI® electric control unit switch box)

Capitol Region Agronomy Team Report

Paul H. Craig
Regional Agronomy Agent
Capitol Region Agronomy Team

Most alfalfa producers across southeast and southcentral Pennsylvania have not forgotten about the alfalfa weevil infestation of 2000.

In May and June 2000, wide areas of these regions experienced an outbreak of this insect pest that was unseen since the early 1970s. In many cases, fields were inspected and control materials applied. However, in too many instances the control products were applied too late in the insect cycle and, as a result, alfalfa forage production was reduced, forage quality greatly impacted, and in many older stands, there was complete loss of the alfalfa stand.

Make note that Dr. Dennis Calvin, Penn State entomologist, has commented that the stage is set for 2001 to be another large alfalfa weevil season. I will try to give you guidance on alfalfa weevil control options.

The alfalfa weevil is the number one insect of pest of alfalfa in the U.S. The adult weevil is a dark gray to brown beetle type insect with a snout that gives it a distinctive appearance. It is about 3/16 of an inch in length and has a dark colored mark on its back. Adults are found from mid to late May, in the fall and again in early spring, around greenup time.

The female adults move from wintering areas surrounding alfalfa fields in early spring. They lay 20 to 30 eggs per alfalfa stem and can lay up to 200 eggs per female. These eggs start to hatch as growing degree days approach 250, about early to mid April, depending on location and topography.

These eggs hatch into soft-bodied, yellowish to greenish larva that resemble caterpillars or fly maggots. As they mature, they become greener in color and have a black head and white stripe on their back. They are only 3/8 inch in size at full development. These larva then spin a cocoon and molt into the adult. Molting occurs in mid May to early June. After molting, the adults feed for a while, enter a summer dormant period, and then move back to the alfalfa in fall to initiate a new cycle.

In 2000, the weevil caught many alfalfa growers by surprise. Many did not know of the problem until first cutting starting a "silvery" cast as the larva, which don't seem to ever stop eating, chewed and skeletonized the tips of the developing plant faster than the plants could grow.

In 2000, another interesting aspect was observed. For the first time, controls were needed on stubble to control larva and adult weevils that were preventing regrowth of second cutting.

Historically, agronomists did not recommend stubble treatments. It was thought that most larva were no longer feeding when alfalfa was traditionally made and the adults did not cause sufficient damage to justify controls. With the move to earlier maturing varieties of alfalfa, this thinking has changed. In 2001 growers will need to be more observant of regrowth conditions and make management decisions that years ago were not even considered.

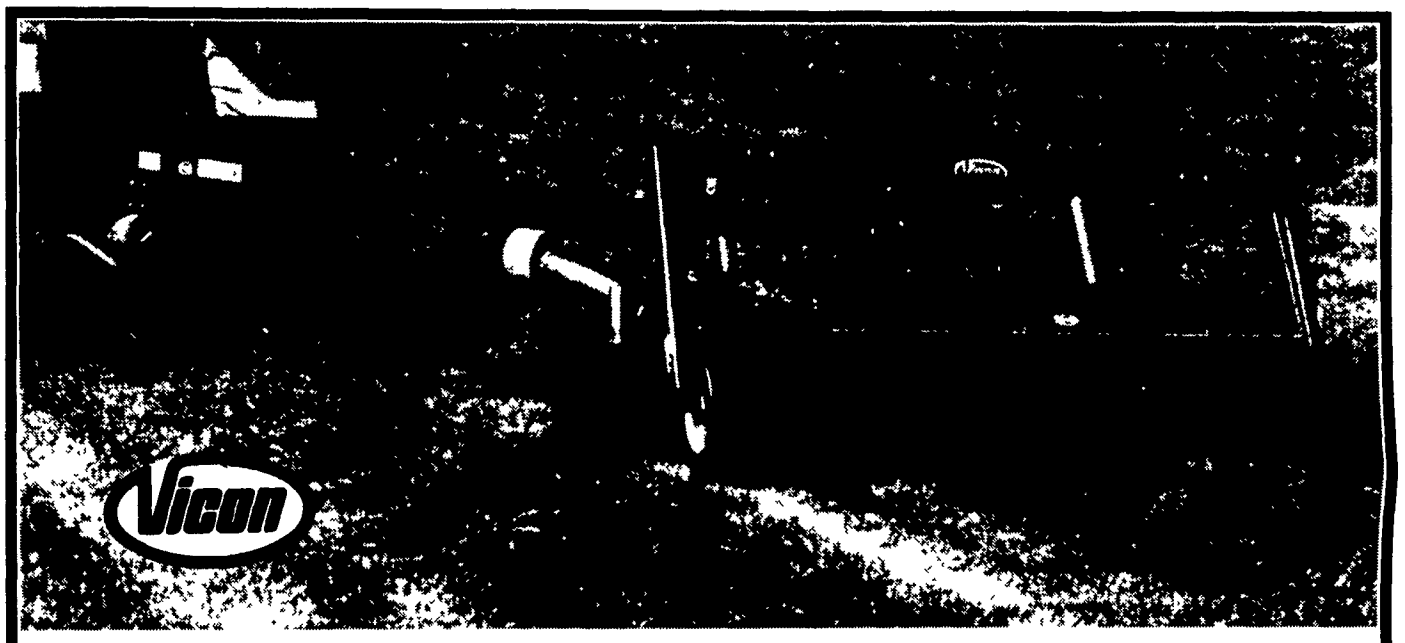
So, back to Dr. Calvin's comments. The stage is set for high levels of alfalfa weevils to be present *this spring. Exceptionally, large numbers of adults were produced* last year. In addition, weather conditions this winter and last fall will certainly ensure that high numbers will survive and be ready to start the cycle again. Alfalfa producers should be planning to monitor their fields this spring and, when evidence of the weevil is observed, consider applying control products. Do not apply materials too early because egg laying will last for a few weeks and control products may not provide adequate protection to later developing larva.

In addition, don't assume all fields will need control products applied. Taking time to get a handle on infestation levels across your fields will pay dividends.

Begin scouting on south facing slopes. These areas tend to warm up more rapidly and insects will be more developed. Look for signs of feeding — holes in leaves at tips of alfalfa shoots. If you look closely, you will be able to find the small, pale green larva among the foliage.

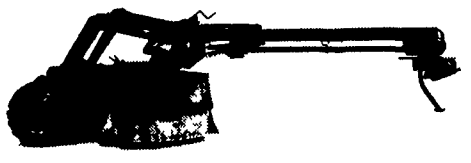
When 40 percent of tips have signs of feeding or when you observe two or more larva per stem on 30 stems collected around the field, then control is warranted. If the presence of weevils is not noted, check back in four to seven days.

In addition, to provide optimum development conditions for your alfalfa stands, consider applying any weed control products early in the season and make sure fertility levels, especially potassium, are in the optimum range.

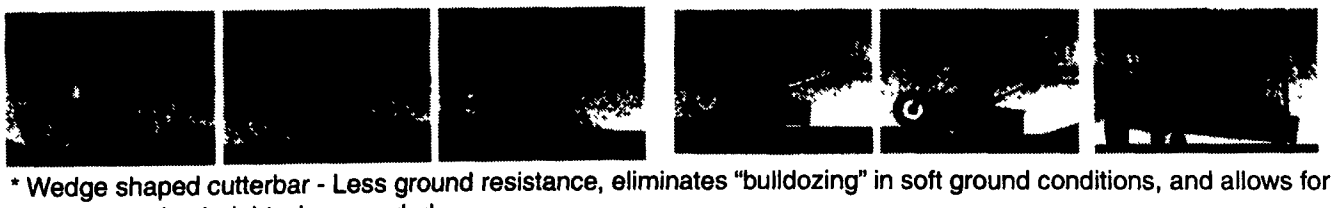


VICON'S KMR Trailed Mower Conditioners

A superb cut with excellent conditioning performance. Available in 7'10", 9'2", 10', 10'6" and 12'6" widths, Vicon is once again "Bringing Technology down to earth."



- Full swivel hitch - PTO stays in alignment when cutting square corners.
- "Free Float" suspension system - With 16" of free stroke in operating position, the cutterbar follows uneven ground and clears obstacles. The center hinge point also permits the mower unit to raise or lower at either side without adding excess pressure on the opposite side. The high-lift design gives swath clearance at headlands.



* Wedge shaped cutterbar - Less ground resistance, eliminates "bulldozing" in soft ground conditions, and allows for a lower cutting height when needed.
* 3 Blades per disc - Vicon's patented design puts 1/3 less load on each blade and an even load on the drive train.
* Top service hubs on cutterbar - Easy Maintenance.
* Labyrinth seals - A specially designed labyrinth seal on the hub of each disc prevents dirt, moisture, and all foreign material from entering.
* Full protected cutterbar - Cutterbar is supported completely with an extra shell and additional wear strips. A reinforcement rod stiffens the cutterbar to prevent flexing.
* Segmented intermeshing fully adjustable conditioning rolls.
* Adjustable formed swath doors for fluffy, easy to pick-up windrows.

PFGC ❖ SPECIAL REPORT ❖

Forage Species For Supplemental Emergency Forage

Mark Sulc
Dept. of Horticulture and Crop Sciences
Ohio State University
Bill Weiss
Dept. of Animal Sciences
OARD/OSU

Many Ohio livestock producers are faced with or will likely soon face a need for supplemental forage to offset decreased or lost production from winter-injured alfalfa stands.

The need for such supplemental forage is already apparent in many cases. The need for supplemental forage may become even more apparent, because some winter-damaged stands of alfalfa may fail to recover satisfactorily after the first harvest.

Earlier this spring, small grains and small grain-pea mixtures could have been planted. Now, and certainly after the first harvest, our options for planting supplemental forage are limited to the summer annual grasses and legumes.

Below is a brief description of these forage species to consider. Refer to the Ohio Agronomy Guide, 13th Edition, for more information on establishment and management of these crops.

Feeding these forages should be based on forage quality analyses and ration balancing to meet the herd's nutritional and energy requirements.

Corn

Corn silage is the best choice in terms of yield potential and feeding value of all annual forages grown in Ohio. Late planted corn (in June) for silage will be lower yielding than if planted earlier in May, but yield potential and feeding value are still higher than for the other summer annual grasses discussed below.

If forage is needed before the ear is formed, corn can be green-chopped. Without the ear, feeding value will be at least equal to that of the other summer annual grasses, and forage dry matter yields are likely to be higher with corn.

This offers some flexibility for producers who may need to extend their forage supplies in late summer before the corn is ready for silage harvest.

Some acres could be green-chopped, and the rest saved for silage harvest at the recommended kernel milkline stages when corn reaches 30 to 40 percent dry matter content. Earlier maturity hybrids may be an option for reducing the time to corn silage harvest; however, we have no data on silage yield potential of very early season corn hybrids.

Summer-Annual Grasses

These grasses grow rapidly in late spring and summer, and when managed properly can provide forage of good quality. Summer-annual grasses are a good double-crop option when planted after a small grain crop. With the exception of pearl millet, the summer-annual grasses are members of the sorghum family. These species differ in prussic acid poisoning potential (see below), but all are equal in nitrate toxicity potential.

Sudangrass is fine-stemmed, leafy, and grows between three to eight-feet tall. It will regrow following each harvest until cool temperatures or lack of moisture inhibit growth. It is the preferred summer-annual grass for pasture, and can be used for hay. Solid stands grow shorter than when seeded in rows. Sudangrass usually contains lower levels of prussic acid and is usually lower yielding than the other sorghum family grasses. Sudangrass hybrids are generally slightly higher yielding and have slightly higher prussic acid levels than sudangrass at comparable stages of growth.

Sorghum-Sudangrass Hybrids are made by crossing sorghum varieties with sudangrass. They resemble sudangrass in growth habit, but are generally taller, have larger stems and leaves, and are higher yielding. This grass can become coarse and unpalatable if not properly utilized. It is not as well suited for hay production as sudangrass. Sorghum-sudangrass hybrids will regrow following each harvest unless environmental conditions are restrictive, as with sudangrass. They are more likely to contain toxic levels of prussic acid.

Pearl Millet is not in the sorghum family and prussic acid is not produced in the plant. It tends to have smaller stems and be more leafy than the sorghum grasses. Pearl millet will regrow after each harvest, but not as rapidly as sudangrass or sorghum-sudangrass hybrids. It may also be more sensitive to cutting height for regrowth than sudangrass.

Forage sorghum grows six to 15-feet tall and has potential for high yields. It is utilized as a one-cut silage or greenchop crop. Forage sorghum produces silage containing more digestible energy than legume and cool-season grass silage. Making high-quality silage from forage sorghum is generally easier than from forage legumes because of the high levels of nonstructural carbohydrates which enhance fermentation. The high-energy, low-protein characteristics of forage sorghum silage make it a good supplement for high-protein forage legumes. The feeding value of forage sorghum silage is considered to be about 85 percent that of corn silage; therefore, corn silage is usually the preferred high-energy silage grown in Ohio. But forage sorghum has the potential to grow better than corn

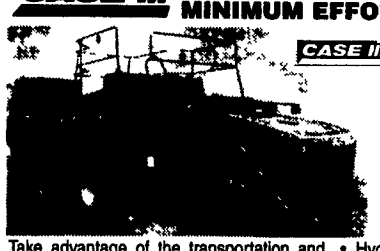
CASE IH MAXIMUM PAYLOAD. MINIMUM EFFORT.



ALL-NEW 8585 LARGE SQUARE BALER

FIND OUT HOW TO MAKE HAY PAY WITH THE BEST DEALS ON THE BEST EQUIPMENT!

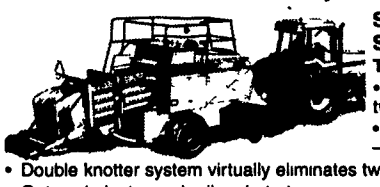
Take advantage of the transportation and handling advantages of the new 8585 Large Square Baler from Case IH. For maximum payload with minimum loading effort, the new 3x4 foot bale size takes fewer bales to fill a flatbed, so you save time and keep trucks coming back for more hay

- Industry-leading 30-ball twine capacity means nonstop baling productivity.
- Six heavy-duty double knotters provide secure ties bale after bale
- Hydraulic density control, high-flotation tires, and adjustable ejector are standard
- Automatic central lube system greases critical points to reduce downtime
- Heavy-duty pick-up with dual cam tracks means greater durability for handeling wide and heavy windrows

Before you load another flatbed, calculate the handling and transportation savings of an all-new 8585 Large Square Baler

Uptime. All the time.™

Model 8575 High Moisture OR Dry Baling At Its Best! Bale Chamber 31-1/2"x34.4" With Adjustable Length Up To 98" Long!



Simplify Your Operation! Simplify Your Life!

The features include:

- Wide, low-profile pickup -rake two windrows together
- Charge chamber preforms flakes – better leaf retention
- Double knotter system virtually eliminates twine breakage
- Optional ejector and roller chute to remove silage bales
- Optional 8576 accumulator groups up to four bales in strategic locations

Fits the way you farm.

- Bale dry or silage hay with no changeovers
- No stopping to tie and eject bales
- One 8575 can replace two 5' x 6' round balers
- Operate with only one tractor and one man.
- Higher hay quality means more profits

CASE IH

SPECIAL REPORT

(Continued from Page 22)

on light-textured, shallow soils that tend to be droughty.

Mixtures of summer-annual grasses and legumes such as field peas and soybeans are being marketed by some seed dealers. The legumes generally improve protein content compared with summer-annual grasses grown alone. The annual legumes included in these mixtures would be present in the first growth only; regrowth would occur only from the grasses (except forage sorghum which does not regrow after harvest).

Soybeans

Corn silage should be the first choice over soybeans, but soybeans can provide supplemental forage with good management and provided herbicide restrictions are adhered to. Use of herbicide-treated soybeans for forage or hay is allowed for only a few herbicides, so check the label before using herbicides on soybeans to be used for forage.

The optimum time to harvest soybeans for hay to optimize yield and quality is when seeds are filling the pods and the lower leaves of the plant are just beginning to turn yellow. If harvested for silage at this stage, soybeans should be mixed with corn in the silo to achieve acceptable fermentation. Mix one part soybean with two or more parts of corn in the silo. If soybeans will be ensiled alone, then harvest at about 60 days of growth (before seed formation) to avoid the high oil content which inhibits good fermentation in the silo. This practice is not the best choice, because of the resulting low dry matter yields.

Soybean forage should comprise no more than 30 to 40 percent of the dry matter intake of the animal, because of its high oil content (assuming it was harvested when seeds were formed). This level will not be exceeded when soybean and corn silage are ensiled together in the proportions described above.

Brassicas

Brassica crops such as turnip, rape, kale, or swede are fast-growing crops that are good options for grazing, especially for sheep and beef cattle. These crops are highly productive, and can be grazed from 80 to 150 days after seeding, depending on the species. These crops must be treated more like "concentrates" than "forage" in nutritional planning for livestock because of their high digestibility and low fiber content. They are seldom used as dairy feed because they can cause an off-flavor in the milk. Consult the latest Agronomy Guide edition and county extension offices for more information.

Weed Management In Forage Systems

Del Voight
Agronomy Extension Agent
Lebanon County

Weeds can impact the quality of forage on the farm and will take over pastures and fields if left unchecked. Some weeds harbor chemicals which are poisonous and can cause animals to go off feed, lessen milk yield, and in rare cases cause death.

Weed outbreaks under forage and pasture systems usually indicate poor stand management to learn the competitive balance toward the weeds and not the crop.

This article will discuss some weed management options under various pasture and forage systems.

Horse pastures are usually the hardest hit from weed pressure. Owners normally have too few acres for too many horses and the grazing scheme lends itself to weed invasion. Contrary to popular belief, grass pasture stands can thrive under intensive horse grazing.

Proper selection of grass species and maintenance of the stand with semiannual applications of nitrogen are critical to stand establishment and maintenance.

Some farms I have visited are trying to raise a grass species that will not tolerate the soil conditions in the place! Check the agronomy guide — pH should be maintained at 6.5 while phosphorus and potassium should be in the optimum range.

Don't guess soil test. Adoption of a sound rotational grazing system employs good fencing systems as well as utilizes a sacrifice area so when conditions are not ideal for grazing, then the horses can tear up one area and not the whole area. That alleviates most of the pressure from weeds.

Pastures for horses that I have seen and have helped to renovate too often let animals on the paddock too early in the spring. Adequate regrowth of the stand will reduce weed germination by shading the soil.

The best scenario is to fertilize in the spring and wait until at least six-inches of growth (this depends on species) is observed, and then the first paddock can be grazed without being concerned with depleting the stand and letting weeds compete. Another crucial area with weed prevention is the maintenance of divots and bare ground areas. Seed should be easily available in the barn, on the tractor/saddle to constantly overseed bare areas and let the animals push it into the soil. Bare spots also respond to frost seeding in the fall or early spring to further lessen the sites available for weed invasion.

Beef cow/calf systems demand attention to proper grazing strategies. Swards should follow the same fertility grounds as the horse owners, but many times may require fertilizer because of the offsite moving of nutrients from the fields to other areas in the form of meat.

Due to the typically larger acreages available to beef producers, a more elaborate fencing system is paramount. A high quality perimeter fence along with single strand electric fence works well to rotate cattle and keep the grass competitive with the weeds.

Driving in the capitol region, one may easily pick out a overgrazed paddock and there seems to be more than less. Since cattle are split hoofed, they can damage stands severely under dry conditions. Having enough supplemental hay to keep animals off pasture is crucial.

There is a huge body of knowledge available on grazing for cattle on the Internet and at Penn State Cooperative Extension.

Like horses, sheep tend to easily overgraze and as such need to be more strictly watched and moved as the stand height is decreased from feeding. The same principles apply for horses as sheep.

The base of Kentucky bluegrass which has the ability to regenerate from root stock is critical to weed management for these animals.

Some try to maintain grass and legume stands. This is difficult because many broadleaf herbicides will kill the legumes. Besides, the legume management is much more intense. One should separate paddocks and manage a legume (clover, alfalfa, etc.) by itself, where only an hour or so of feeding is aloud to prevent feeding problems.

Under mechanical harvesting conditions, the resulting yield is not as easily separated in regard to weed from forage. The animals cannot separate weeds from hay or haylage so, the overall forage quality may be affected by the weeds present. For this reason, producers should strive to maintain the stand for top production.

Many weeds are nutritious but the optimum stage to harvest weeds does not always match to the optimum stage of the forage to be grown.

Some research I have seen illustrates this fact, and if anyone would like a copy, read on for my e-mail and phone.

Forage grass weed management is fairly easily accomplished because in general it is easy to control broadleaves in a grass crop and vice versa.

Probably the most overlooked management in a grass stand is nitrogen management. Producers I am in contact with many times underapply nitrogen or apply the nitrogen, and rain does not occur to move the nitrogen into the soil. As a result, the nitrogen evaporates to the atmosphere.

"Timing is everything" — this rules applies. Apply immediately before a rain.

Cutting bar height is also critical to stand management. At least three-inches of height should remain on the plant to preserve the carbohydrates in the stem and allow the plant a chance to quickly recover from the harvest. This will allow quicker canopy of the soil and result in fewer weed invasions.

Legume stand management is challenging but oftentimes can be easy if the proper stand is established and the soil requirements are met.

The pH (7.0 preferred) of the soil is important in allowing the legume to flourish.

Under high cutting conditions, many weeds are eliminated because of frequent cuttings. Seeding in late summer eliminates many weeds from competing with establishing legume stands.

Some stands ultimately need some help from herbicides. More broad spectrum herbicides are becoming available that will aid in weed management systems in legumes.

Look for Raptor TM and Round UpTM ready alfalfa in the future. For the most part, winter annuals such as chickweed and henbit invade legume stands. Many herbicides may be applied in the fall or early spring to eliminate these problems but some times difficult perennials invade. Then it's time to consult the agronomy guide.

Although weeds are inevitably going to invade a stand, there are some simple management decisions that can sway the pendulum to the crop, not the weeds. Proper identification of the weed is important to determine the particular herbicide to use.

❖ GRAZING BITS ❖

Locate Hay/Silage To Buy Or Sell On World Wide Web

Penn State, through its cooperative extension offices in each county across Pennsylvania, maintains a World Wide Web data base for locating forages to buy or sell. To locate forages to buy, access http://forage.cas.psu.eduand click on the "hay and silage" icon. Once you get to the Website, you can search by hay quality, price, or location.

To advertise forages for sale on this site, contact your local cooperative extension office. Here is the information you'll need to have available:

- Type, quantity, and quality (if available) of forage.
- Location and price of forage.
- Contact information.

This site has listings from surrounding states but also links directly to data bases in other states. So, from this one site, you can literally buy or sell hay across North America.

Timothy Yields Reduced By Cereal Rust Mites

Marvin Hall and Paul Craig
Penn State

Timothy is a very important forage crop throughout Pennsylvania, Maryland and New Jersey. Unfortunately, this crop has recently been attacked by a new pest, the cereal rust mite (Abacarus hytrix).

This mite, as it's name implies, has been a pest to cereal crops (wheat and barley) but more recently has become a pest to timothy. Maryland has been reporting cereal mites damage to timothy for a couple years. In Pennsylvania, they were first identified as a major problem by the Agronomic Service industry and brought to the attention of the Capitol Region Extension Agronomy Team last year.

The cereal mite feeds on cells in the grooves between the veins on the leaf surface. This feeding causes the leaves to roll and appear drought stressed even when soil moisture is plentiful. The rolled leaves reduce the amount of photosynthesis that occurs and consequently stunts timothy growth and yield.

Unlike most other pests, cereal mites are most active in cool/cold weather. They survive on plant debris and begin laying eggs in February and March. Each adult lays between 20 and 40 eggs.

The eggs hatch in April and start to feed on the timothy leaves. After the initial egg hatch in April, a new generation hatches about every 16 days, so populations can increase very rapidly.

Symptoms of the feeding damage (rolled leaves and reduced growth) generally start to appear in April. Warm temperatures in June cause the adults and eggs to begin dying or forming deutogynes (cysts). These cysts are the structures that allow the mites to survive the hot summer and early winter months before they begin laying eggs in February.

Unfortunately, control of the mites is not easy. No management practices have been found to reduce the mite population and no pesticide is currently labeled for mite control in timothy. In research trials, controlling the mites with pesticides has not been 100 percent effective because the chemicals do not kill the eggs and frequently have limited effect on the adults because the rolled leaves protect them from the pesticide.

Consequently, populations of the mites generally rebound soon after treatment. Screening of timothy varieties for resistance to the cereal mite is ongoing.

Conference Feb. 28-March 1

(Continued from Page 1)

grazier as well as a dairy and livestock agent at Michigan State University Extension and one of the country's leading experts on pasture watering systems.

Bartlett is involved with livestock production and has traveled the world over to set up beef cattle operations. He has worked in Korea and Japan and most recently in Argentina. In his travels, he has been willing to "look around the corner" for new ideas and technologies and to bring that technology home to America, where he has applied it to livestock operations. He will be bringing his vast experience and knowledge on watering systems to Pennsylvania and to share with the audience. Ben will also provide the keynote address for the conference with a talk entitled "Are You Serious About Grazing?"

Also featured will be Greg

Greg Coumo

Coumo, director of the Agricultural Research Station in Minnesota, and Barbara Glenn, executive vice president of the Federation of Animal Science Societies. Coumo will lead a discussion on extending the grazing season. Glenn will address the topic, "Genetically Enhanced Agriculture: The Future?"

On Wednesday evening, those who

Barbara Glenn

are attending the conference will have a unique opportunity to hear about and ask questions of several graziers wives about changes in family lifestyles. Here is the chance to hear "the rest of the story" about

Ben Bartlett

this relaxed lifestyle and maybe even see if it is for you and your family. There will also be other informal discussions taking place on Wednesday evening with many of the days' presenters. There will be plenty of time to ask questions and discuss with fellow farmers current concerns for the farm or the grazing industry.

As part of the conference, there will be a trade show where company representative will be on hand to showcase what is new with forages and grazing technologies.

Wednesday, Feb. 28

9:00 a.m. — Registration and coffee
10:00 a.m. — Welcome
10:15 a.m. — Are You Serious About Grazing? — Ben Bartlett
11:00 a.m. — Pasture Establishment And Renovation — Greg Coumo
Noon — Lunch and visit exhibitors
1:30 p.m. —
A. Avoiding the "Summer Slump" — Mena Hautau, Brian Mohn, William Lesher, and Clyde Myers
B. Silage Making And What To Do If It Goes Bad — Marvin Hall and Bob VanSaun
C. How Little Is Too Little? The Role of Farm Land in the Agriculture Economy — Tim Kelsey
2:45 p.m. — Break and Visit Exhibitors
3:30 p.m. —
A. *Avoiding the "Summer Slump" Mena Hautau*, Brian Mohn, William Lesher, and Clyde Myers
B. Silage Making and What To Do If It Goes Bad — Marvin Hall and Bob VanSaun
C. Animal Health/Biosecurity — Dave Wolfgang and Allan Kozak
4:45 p.m. — Adjourn
5:30 p.m. — PFGC Awards and Reception
7:00 p.m. — Informal Evening Discussions
• Grazing and Lifestyle Changes — June Hertzler, Ed Koncle
• Water and Shade on Pasture — Dave Hartman and Ben Bartlett
• More on Pasture Renovation and Establishment — Duane Pysher and Greg Coumo

Thursday, March 1

8:00 a.m. — Registration and coffee
8:15 a.m. —
A. Extending the Grazing Season — Greg Coumo
B. Using the Internet for Increasing Profit — Dave and Colleen Epler-Ruths
C. Low Cost Milking Parlors — Pat Richie, Tim and Denise Wetzel, and Duane Hertzler
9:30 a.m. — Break and Visit Exhibitors
10:15 a.m. —
A. Management Of Nitrogen And Phosphorus In Grazing Systems — Bill Stout and Larry Muller
B. Estate Planning Strategies To Keep Your Farm In The Family — David Panko
C. Low Cost Milking Parlors — Pat Richie, Tim and Denise Wetzel, and Duane Hertzler
11:30 a.m. — Lunch and Visit Exhibitors
1:00 p.m. — Genetically Enhanced Agriculture: The Future? — Barbara Glenn
2:00 p.m. — Pasture Watering and Shade Systems — Ben Bartlett
2:45 p.m. — Wrap up and door prizes
3:00 p.m. — Adjourn

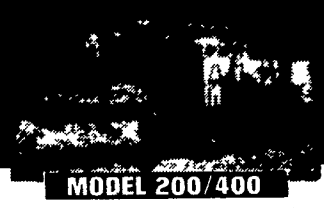
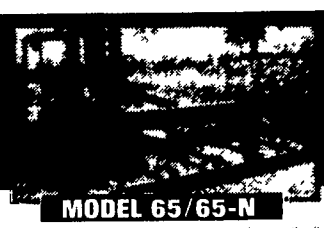
SPECIALIZING IN CUSTOM MANUFACTURED AGRICULTURAL EQUIPMENT

MODEL 55/55-N
The Model 55 is the most versatile of all models matching up to a wide variety of bale patterns It can carry up to 12 two-tie bales 8 three-tie, or 3 midsize bales at one time It can also be connected to a 90 degree rotator a powered vertical tilt or any of a variety of loader units

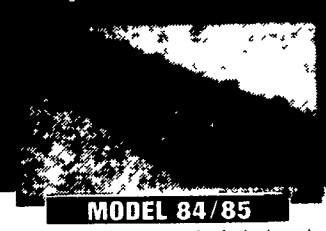
Innovative Hay Handling Solutions For Today's Hay Producers.



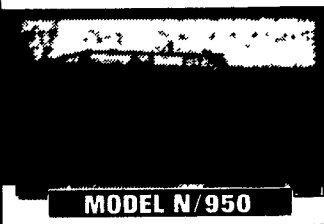
MODEL 200/400
The model 200 is a highly maneuverable vehicle built from the ground up specifically for handling hay It can be mated with all bale rack models to handle all sizes of square bales, large or small Its extremely rugged design easily handles up to 2000 lbs to 21' high or in the Model 400 version 4000 lbs up to 25' high



MODEL 65/65-N
The Model 65 is specifically built to match up with all New Holland 3 bale wide stack wagons It can carry 12, 15 or 18 bales flat or on edge, depending on model It is ideal for topping stacks or loading and unloading trucks



MODEL 84/85
These models are extra heavy duty for the demanding application of carrying up to 2 big bales or 3 midsize bales at a time They have additional bearings and extra large teeth that dig deep into the bales to insure a firm grip even with soft or wet tops



MODEL N/950
The model 950 is specifically made for packaging 10 bales together to form a tie package measuring approximately 6-1/2'x 8' ready to load directly onto a truck This completely eliminates the need for someone to turn bales on the truck to get a full load Also, it eliminates the need to hand stack at the barn This is truly the only system that eliminates all hand labor

PFGC ❖ PRESIDENT'S CORNER ❖

Ed Koncle
Farm Seed Sales Manager
P.L. Rohrer & Bro.

What a great year it has been as Pennsylvania Forage and Grassland Council (PFGC) president!

This summer's 40th Anniversary Celebration provided an opportunity to meet council founders and learn from leaders in the agriculture industry.

Then, this fall, I had the pleasure of honoring the PFGC scholarship winners for the 2000/2001 academic year. Those recognized included Kendra J. Weaver, Timothy A. Redd, Matthew T. Jewast, and Taryn D. Wentzel, all Penn State students. Kenneth Crisafulli, a Delaware Valley College student, also received a scholarship. Congratulations to all!

As I traveled around the state during my tenure, many farmers shared their concerns and ideas regarding the current agricultural climate. Crops are plentiful but prices are down. As many farmers have told me, they are looking at alternative markets. They see the success of forage crops and the opportunities they can provide.

That brings me to the Pennsylvania State University and PFGC Grazing Conference, Feb. 27-March 2. Mark you calendars! Keynote speakers Don Bartlett, Greg Cuomo, and Marvin Hall will be making the grand tour from Meadville to Grantville and ending in Troy. This program may help you decide if grazing is for you!

On Wednesday, Feb. 28, I will be moderating a unique panel discussion which will include the wives of four farmers who have pursued grazing. I know this will be a very interesting program and will provide us with a unique perspective on today's farm family.

I believe we are at a turning point in agriculture. In accomplishing our goals, we need to look at what we are doing and determine how we can do it better.

Thank you for the opportunity to represent you as PFGC president. It has been a privilege to represent you on the board of directors. Contact me by phone (717) 299-2571 or by email at PL__Rohrer@compuserve.com.

Best wishes for continued success!

Weed Management

(Continued from Page 24)

The "Weeds of the Northeast," book available at the extension office is an excellent color reference book to properly identify weeds. The Agronomy Guide, available on the Web and in hard copy at the extension office, details all aspects of forage and pasture management as well as allows one to select the proper herbicide product, rate, date, and time of application for the identified weed.

Finally, I am available to discuss weed management options as are the new agronomy team in the capitol region. You can reach me at dgvl@psu.edu or call me at (717) 270-4391.

By understanding how the complete system operates, one may better utilize all resources to manage crops and pests.

BUY THE COMPLETE SYSTEM FROM BINKLEY & HURST NOW!

Pull A High Quality Richardton Behind Your Forage Harvester!

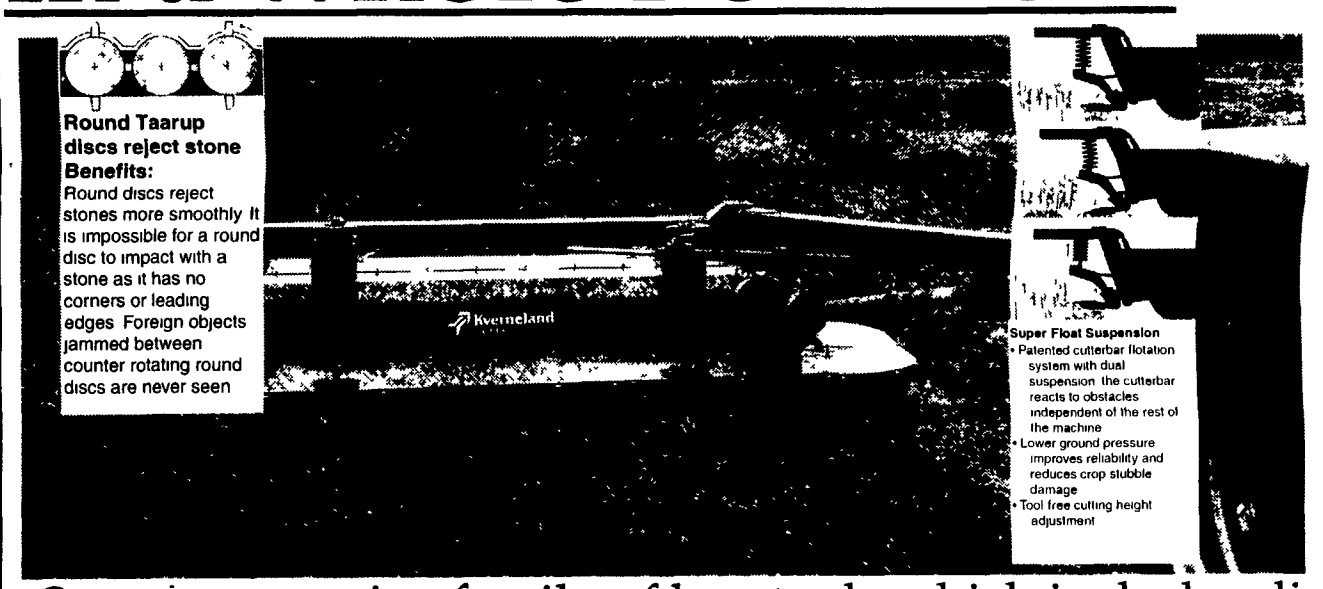
Kverneland excellence in a whole new field



Round Taarup discs reject stone Benefits:
Round discs reject stones more smoothly It is impossible for a round disc to impact with a stone as it has no corners or leading edges Foreign objects jammed between counter rotating round discs are never seen
Kverneland
Super Float Suspension
• Patented cutterbar flotation system with dual suspension the cutterbar reacts to obstacles independent of the rest of the machine
• Lower ground pressure improves reliability and reduces crop stubble damage
• Tool free cutting height adjustment

See our extensive family of hay tools which includes disc mowers, rakes and tedders

Kverneland
- The Number One selling round bale wrapper in **The United States and the World!**
- Keverneland pioneered the wrap system in 1986
- Complete range of machines to suit every need three trailed models, two mounted self-loading, three mounted conventional, and now an ultra high capacity wrapper made expressly for large square bales up to 4'x4'x6' in size

Kverneland Kidd KD 825 Silage Chopper
- PTO driven discharge conveyor decelerates the chopped material ensuring an even and positive flow of feed without an excess of dust or loss
- Four other models are available for dry hay and straw applications
- Hydraulic bale lifter and slip clutch protected PTO together provide safe, smooth, low torque starts

SPECIAL REPORT

DISEASES OF FORAGE CROPS AND MANAGING TO MINIMIZE THEM

Kenneth T. Leath and Marvin H. Hall
Penn State

It has been estimated that up to 25 percent of the Pennsylvania's alfalfa yield is lost annually to disease. Losses in red clover would likely be similar.

Reduced yield is not the only effect of diseases on forages. Reduced forage quality, plus the increased costs of more frequent reseeding, also contribute to the total loss because of diseases.

Forage crops are host to many diseases causing agents (pathogens) such as fungi, bacteria, viruses, and nematodes. Because most forage crops are perennial, there is ample time for disease to occur and cause plant stresses which are cumulative.

This is true not only for diseases but also for the effects of management practices. Anything that happens to a plant at one stage of development may affect not only that particular stage, but following stages as well, even into the next growing season. The perenniality of forage crops which provides many opportunities for disease to occur, also provides opportunities to implement management strategies that minimize the impact of disease.

Managing Forage Diseases

Fungicides are used sparingly on forage crops and only at planting. Fungicides capable of controlling several diseases on forages are available, but because of residue concerns and costs, they are not used. Because of the very limited use of fungicides which help control diseases, the term "disease management" is more appropriate for use with forage crops than is the term "disease control."

There are several crop management practices that relate directly to disease management, and it is important to be aware of these relationships. Harvesting, for example, puts a major stress on forage crops, and when harvesting frequency becomes too intense, root and crowns are stressed and are more prone to attack by disease-causing organisms. Reasonable harvest schedules should be followed to avoid increased disease losses.

The mowing of youngest stands first can help to reduce losses to most forage diseases. This is because many pathogens are not present in new seedlings and must be introduced into the field. Most pathogens can be carried in infected plant debris, for example, leaves and stem pieces. If infested plant material drops off a piece of equipment into a young stand, there is a good chance that infections will occur in that field.

Many pathogens can also be transported in plant sap or juice on cutting bars or flails. Frequently plants that are down-row from infected plants become infected when the harvester cuts the infected plant and then transports the pathogen on down the row.

In Pennsylvania some pathogens have difficulty surviving through the winter in the field, but they can survive in plant debris on equipment stored under shelter. Therefore, it is important to clean all equipment of plant debris before winter storage and as often as is feasible during the season.

Crop rotation is a valuable tool in reducing disease problems. Many pathogens do not survive well without a suitable host, and the inoculum level of many forage crop pathogens can be reduced by two-or three-year rotations. Failure to rotate crops on a regular basis can result in less benefit from legume-fixed nitrogen, and can allow slowly developing chronic pests, such as nematodes, to reach problem levels.

(Turn to Page 30)

Silage: Field To Feedbunk

ITHACA, N.Y. — Silage is a central component of animal agriculture in temperate climates, with most farms feeding 50-100 percent of their forage in the form of silage.

Because silage is the most unstable feedstuff producers grow and handle, providing high-quality silage is a constant challenge.

"Silage: Field to Feedbunk," NRAES—99, offers the latest recommendations regarding mechanical and managerial factors involved in meeting that challenge.

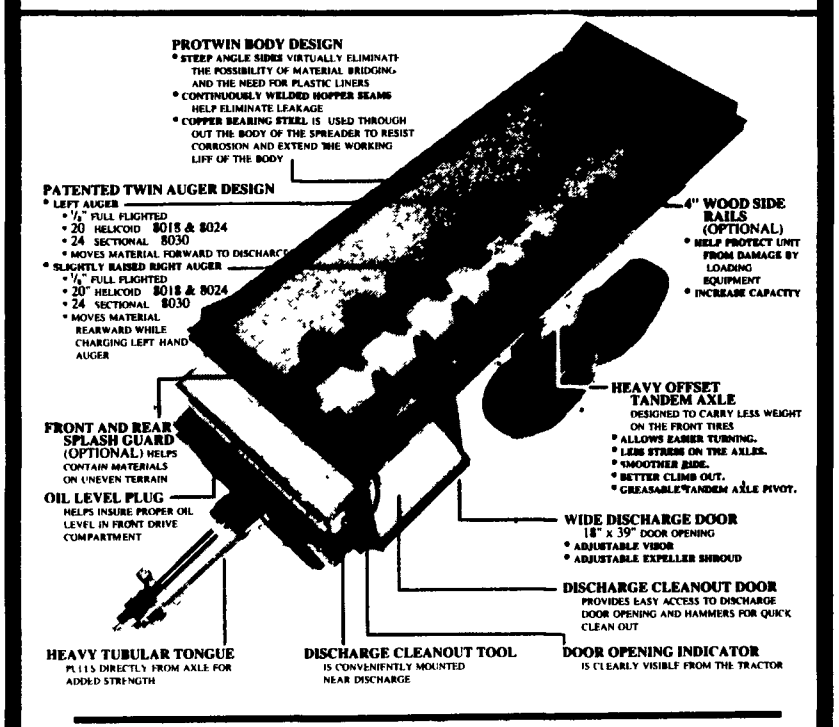
"Silage: Field to Feedbunk" is available for $30 per copy (plus shipping and handling) from NRAES, Cooperative Extension, 152 Riley-Robb Hall, Ithaca, New York 14853-5701. Quantity discounts are available. The shipping and handling charge is $5 for a single copy within the continental U.S. For information about quantity discounts, or for a free publications catalog, contact NRAES by phone at (607) 255-7654, by fax at (607) 254-8770, or by e-mail at nraes@cornell.edu.

"Silage: Field to Feedbunk" is the proceeding of a February 1997 conference in Hershey, Pa., where more than 490 producers, producers' advisers, industry representatives, and researchers met to discuss all aspects of silage production and use. The publication offers 36 papers divided among eight key areas: plant and field issues, harvesting high-quality silage, storage, additives management, mycotoxins and spoilage, evaluation, feeding, and silage systems management.

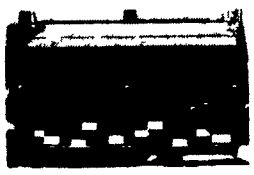
The proceedings will be a valuable resource for agricultural and industry professionals, including silage producers and users, extension and university educators, agronomists, crop consultants, feed, seed, and equipment sales representatives, plant breeders, animal scientists, agricultural engineers, nutritionists, veterinarians, IPM professionals, and analytical laboratory staff.

High Quality Knight Spreaders Come From Binkley & Hurst Bros., Inc.

Expeller Door Controls Calibration of Spreading Thickness & Uniformity of Spread Patterns, Which Makes This Spreader Ideal For Top Dressing Grasslands & Forage Crops



PROTWIN BODY DESIGN
• STEEP ANGLE SIDES VIRTUALLY ELIMINATE THE POSSIBILITY OF MATERIAL BRIDGING AND THE NEED FOR PLASTIC LINERS
• CONTINUOUSLY WELDED HOPPER SEAMS HELP ELIMINATE LEAKAGE
• COPPER BEARING STEEL IS USED THROUGH OUT THE BODY OF THE SPREADER TO RESIST CORROSION AND EXTEND THE WORKING LIFE OF THE BODY
PATENTED TWIN AUGER DESIGN
• LEFT AUGER
• ½" FULL FLIGHTED
• 20" HELICOID 8015 & 8024
• 24" SECTIONAL 8030
• MOVES MATERIAL FORWARD TO DISCHARGE
• SLIGHTLY RAISED RIGHT AUGER
• ½" FULL FLIGHTED
• 20" HELICOID 8015 & 8024
• 24" SECTIONAL 8030
• MOVES MATERIAL REARWARD WHILE CHARGING LEFT HAND AUGER
4" WOOD SIDE RAILS (OPTIONAL)
• HELP PROTECT UNIT FROM DAMAGE BY LOADING EQUIPMENT
• INCREASE CAPACITY
HEAVY OFFSET TANDEM AXLE
DESIGNED TO CARRY LESS WEIGHT ON THE FRONT TIRES
• ALLOWS EASIER TURNING.
• LESS STRESS ON THE AXLES.
• SMOOTHER RIDE.
• BETTER CLIMB OUT.
• GREASABLE TANDEM AXLE PIVOT.
FRONT AND REAR SPLASH GUARD (OPTIONAL) HELPS CONTAIN MATERIALS ON UNEVEN TERRAIN
OIL LEVEL PLUG HELPS INSURE PROPER OIL LEVEL IN FRONT DRIVE COMPARTMENT
WIDE DISCHARGE DOOR 18" x 39" DOOR OPENING
• ADJUSTABLE VISOR
• ADJUSTABLE EXPELLER SHROUD
DISCHARGE CLEANOUT DOOR PROVIDES EASY ACCESS TO DISCHARGE DOOR OPENING AND HAMMERS FOR QUICK CLEAN OUT
HEAVY TUBULAR TONGUE PULLS DIRECTLY FROM AXLE FOR ADDED STRENGTH
DISCHARGE CLEANOUT TOOL IS CONVENIENTLY MOUNTED NEAR DISCHARGE
DOOR OPENING INDICATOR IS CLEARLY VISIBLE FROM THE TRACTOR



Hammer Discharge

Patented Free Swinging Hammer Expeller

Forged-Steel Hammer

Each hammer has a nylon bushing and a replaceable manganese steel wear plate

800 RPM allowing each eight pound hammer to swing down into the material, peeling it off and slinging it underhand in a fine spread pattern with no clumps. The 3" wide free swinging hammers absorb shock and tolerate most foreign objects. Each hammer is faced with a work hardening manganese steel wear plate for longer life and low cost replacement. The adjustable shroud allows easy hammer clearance setting for optimum spread pattern width. This proven hammer expeller design enables fine spreading control and material calibration through the combination of the hydraulic door opening and ground speed.

Rear Drive Compartment*

The right auger is driven at the rear and is shear pin protected. Bearings, chains and sprockets are easily accessible for routine maintenance.

*Shields removed for illustration only. Do not operate without shields in place and functioning.

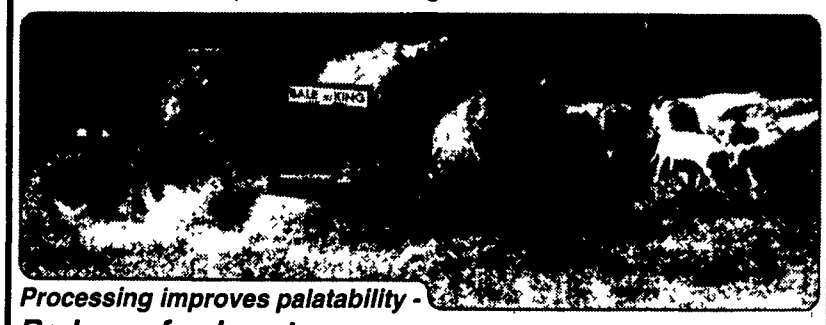
BALE KING

Give your entire herd all the advantages the dominant cows take!

Better bedding with less straw -

A uniform layer of straw helps ensure dry bedding for all your livestock, not just the boss cows. Your entire herd will be cleaner and more comfortable.

Bale King can also be used to spread straw inside poultry barns or blow straw into open front cattle shelters and calving huts as well as produce bedding for hogs. Fast, uniform spreading in a fraction of the time without a pitch fork or strings.



Processing improves palatability -

Reduces feed costs

Processing the bales makes it a lot easier for your livestock to feed. They will no longer have to pull and tear at a packed bale to get a bit of feed. They'll be able to feed faster and use less energy in feeding. Processed feed may improve feed conversion rates. There's also less waste. Many Bale King owners report feed savings of 20% or more.

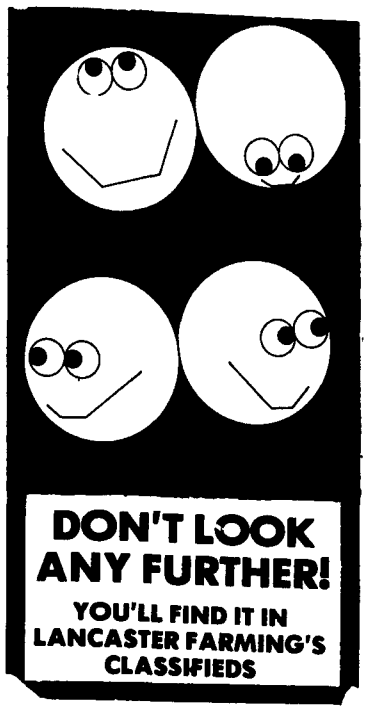
"SERVING FARMERS THROUGH FARM EQUIPMENT DEALERS SINCE 1961"



Winter Weather Effect On Alfalfa Stands

Paul H. Craig
Dauphin County Agent

Recently I read an article that discussed the affect that winter weather can have on alfalfa yields the following spring. The work upon which the article was based was conducted at Michigan State University.

The authors of the study note that injury to alfalfa can be caused by many factors. Among these factors are temperature fluctuations, lack of snow cover, and the persistence of ice sheeting. In addition, the weather conditions in the preceding fall and the following spring can also impact the winter survival of the alfalfa stand.

Fluctuating temperatures with highs in the 40- to 60-degree range during winter can cause plants to break dormancy and initiate growth too early for normal spring development. Snow cover is usually beneficial from the stand point of temperature moderation at the crown and root zone and to protect the plant from extremely low temperatures. A rapid meltdown of snow, followed by cold temperatures, can result in long-term ice sheeting. This can cause smothering, as the roots must breathe over winter, or low temperatures can injure plants because ice has a poor insulating value verses snow cover or "dry" soil.

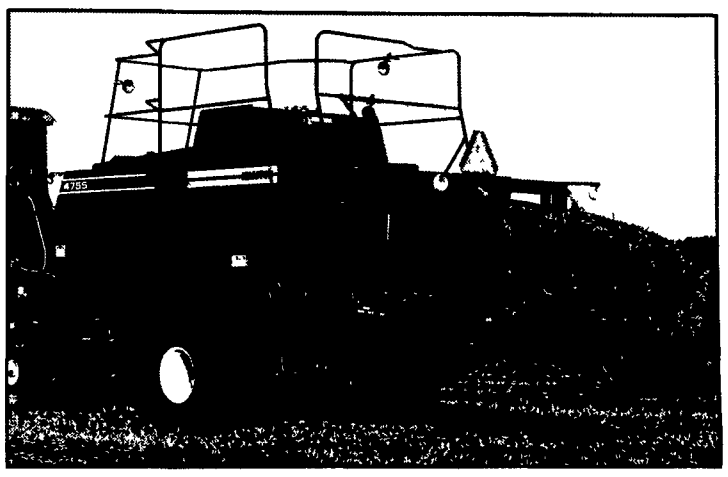
Weather conditions during the fall hardening season have been identified as aiding or hurting winter survival. Long fall periods with sunny but cool conditions favor winter hardening. Fall periods with cloudy conditions and warmer temperatures tend to decrease plant hardening. In early spring, wide temperature fluctuations are not desirable and usually contribute to plant injury. Ideal conditions would be a gradual warming of air and soil with increasing day length periods.

In the Michigan study, the researchers measured first cut yields of alfalfa *as they related to 12 weather variables.* The researchers used data from moderately winterhardy alfalfa varieties managed in a four-cut system, last cut taken on Oct. 15. Yields were taken from variety trial plots in the second and third production seasons.

Of all the weather variables tested, winter temperature fluctuations and spring growing degree day accumulation were the most important weather variable affecting first cutting yields. Fluctuations measured daily air temperatures rising above and falling below 31 degrees with less than six-inches of snow cover.

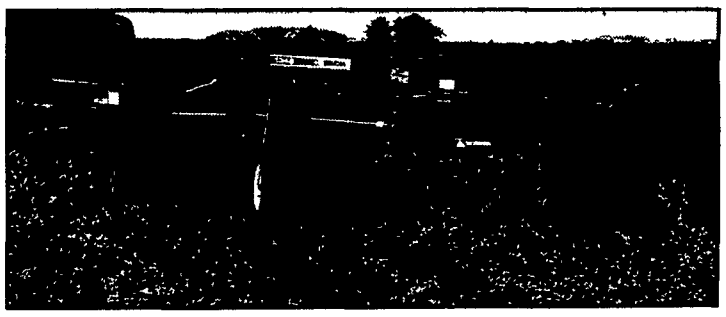
A higher than average number of fluctuations in winter temperatures resulted in lower yields and increased spring growing degree days improved yields. In this study, the minimum daily winter temperature did not reduce first cut yields.

HOOBER & HESSTON...
A Cut Above The Rest



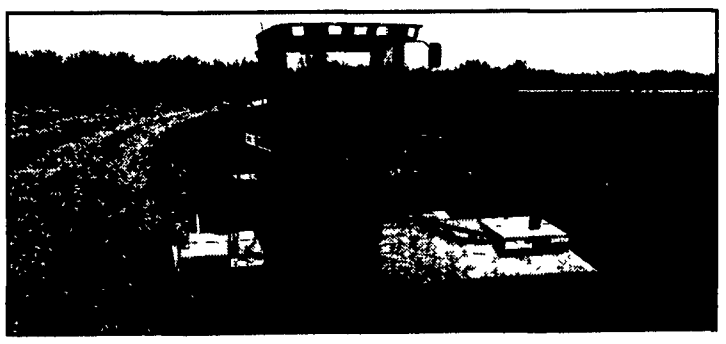
4755 Big Square Baler
Solid construction, reduced labor and timesaving efficiency are all part of the Hesston large bale system that was introduced over 20 years ago These balers are built to last with features such as hydraulic density control, easy accessed and well-protected drives and three-joint equal-angle drive line that permits quiet operation during turns.

- Requires as little as 90 PTO Horsepower
- Bales Measure 31 5" wide by 34 4" High by up to 98" in length
- Bales weigh up to 1,000 pounds in dry hay and 1,500 in high-moisture hay
- Designed to haul three wide and three high for maximum truck payloads



1340 Pull-Type Disc Mower Conditioner
Hesston mower conditioners are known for delivering clean, fast cuts in the field and being able to work in tough conditions These machines were the first mower conditioners that allow you to cut on either side of the tractor, cut square corners or maneuver around field obstacles with a disc cutterbed machine

- Eight Cutting Discs
- Twelve Foot Cutting Width
- Center-Pivot Maneuverability
- 3 Point Swivel Hitch Option
- Rubber-On-Steel or Steel-On-Steel Conditioning Rolls



8550 Self-Propelled Windrower
These self-propelled windrowers are equipped with a 152 HP Cummins Engine, luxury cab and an 8070 Rotary Header

8070 Rotary Header Features:

- 10 Discs
- 2 Knives per Disc
- 15' 3" Cutting Width
- Spur Gear Cutterbed Design
- 110" Conditioning Rolls

All Hesston Machines are In Stock and Ready for Immediate Delivery

Hoober Service
Hoober has 5 hay and forage specialists with the experience and knowledge to keep your equipment running strong all year long. Plus, Advanced Machinery Service is Hoober's commitment to keep up with technology, which is why Hoober service technicians never miss a chance to go to school.

Used Balers from Hoober

SPECIAL REPORT

(Continued from Page 29)

Resistant varieties are the first line of defense against forage diseases. the "Forage Trials Report," issued annually by the Pennsylvania Agricultural Experiment Station, should be your guide to choosing varieties, as the type and level of disease resistance of all varieties is given in this report. A grower should be aware that even the most resistant variety will contain plants that become infected and die from the disease to which the variety, as a whole, is resistant. Over time the frequency of diseased plants will diminish, the healthy plants will fill in the stand, and performance will be satisfactory.

Diseases Of Alfalfa

• Bacterial wilt, Fusarium wilt, and Verticillium wilt are serious diseases in Pennsylvania, although losses are kept to a minimum through the use of resistant varieties. These wilts occur statewide; however, Fusarium wilt is worse in southeastern areas, and Verticullium wilt is more prevalent in the northern counties. It is recommended to grow varieties resistant to all three wilt diseases throughout the state.

• Anthracnose is widespread through the state but is more severe in the southeastern portion. Nearly all varieties for sale in Pennsylvania have moderately high to high levels of resistance, and only such varieties should be grown. Sanitation practices also help to reduce losses from this disease. The fungus that causes anthracnose does not overwinter well in the field, therefore cleaning equipment of all plant debris before winter storage can prevent early introduction of the pathogen into clean fields the following spring.

• Phytophthora root rot can be extremely damaging when it occurs in a young stand because it kills plants very rapidly. Its development, however, is limited to poorly drained sites or to periods following heavy prolonged rainfall. Most newer varieties have resistance to this disease, and only such varieties should be planed where the disease is known to be a problem, or, perhaps another forage species, more tolerant to wet soils should be used. Seed treated with the fungicide, metalaxyl (Apron formulation), is available and should be used in problem areas. The fungicide treatment will likely be beneficial even when a resistant variety is used, because very young plants may not have developed a high level of resistance. Another formulation (Ridomil) of this fungicide is labeled for soil application at planting.

• Aphanomyces root rot is a relatively new disease, and although both strains of the pathogen have been identified in Pennsylvania soils, the importance of the disease in this state has not been established. The disease is caused by a fungus that thrives in wet soils. It is most severe on seedlings, causing stunting and death. However, it can also cause a chronic root disease of established plants. It is possible that some disease losses attributed in the past to Phytophthora root rot were actually caused by Aphanomyces root rot. The fungicide treatments useful in controlling Phytophthora root rot are *not effective against Aphanomyces* root rot. Some newer varieties are resistant to one strain of the pathogen and may provide improved establishment under wet soil conditions.

• Foliar diseases are caused mainly by fungi, and the diseases most common and most severe in this state are lepto, common, phoma (spring black stem), and stemphylium leaf spots. Most of the newer varieties have some resistance to one or more of these leaf spots, but none is highly resistant. All foliar diseases can become severe and cause losses in yield and quality. The recommended management strategy is to harvest early. Yield will be reduced, but quality will be higher, because leaf loss will be minimized. Not only are more leaves harvested, but less inoculum remains in the field to infect subsequent regrowth.

• Root and crown rot complex is the name used to describe the chronic deterioration of roots and crowns, which is caused by fungi and bacteria, and aggravated by insect activity. Usually, initial symptoms can be found in crowns during the year after seeding, and the disease develops slowly over the following years, destroying additional tissue and eventually killing the plant. Recommended harvest schedules should be followed and adequate levels of P and K fertilizer should be maintained to reduce plant stress and slow the progress of this disease.

• Sclerotinia crown and stem rot develops rapidly, but only when its particular environmental requirements are met. Cool, wet conditions are needed by this pathogen in order for serious disease levels to be reaches. Prolonged snow cover in the spring provides a suitable environment. Recently, this disease has become more common and more severe in alfalfa seeded with conservative tillage practices in late summer or early fall.

Diseases Of Red Clover

Red clover is afflicted by some of the same diseases that occur on alfalfa. the root and crown rot complex and Sclrotinia stem and crown rot are diseases common to both crops, and the comments that were made relevant to these diseases on alfalfa apply generally to red clover.

• Northern and Southern Anthracnose are caused by two different fungi, but the symptoms are quite similar. The same fungus that attacks alfalfa causes southern anthracnose of red clover. Both diseases can cause severe losses and stand thinning in red clover, and occur, at least briefly, during most growing seasons.

Usually, northern anthracnose occurs in early spring with southern anthracnose following later in the summer. Newer varieties have resistance to one or both of these diseases, and the improved performance of these varieties is due mainly to this resistance. Varieties with moderate or higher resistance levels to both disease are recommended for planting throughout the state. Resistance levels for specific varieties are given in the "Forage Trials Report.

Diseases Of Forage Grasses

For the most part, diseases on forage grasses are simply tolerated, since most of them do not pose a major threat to production or stand longevity. Diseases do, however, reduce yield and quality of grass forage and reduce profits to producers. Crop rotation can reduce disease losses in forage grasses, because without rotation, nematode populations can increase to a level that severely limits production in second and third harvest. Often nematode injury is hard to diagnose, and the lack of productivity or response to nitrogen is attributed to other factors.

Some of the same management practices that are recommended to reduce diseases in alfalfa also apply to forage grasses. In general, development of excessive or underutilized top growth should be avoided by timely cutting or grazing to reduce the buildup of inoculum in infested thatch. Excessive nitrogen fertilization should be avoided, as this may promote production of succulent leaves and stems that are more susceptible to infection.

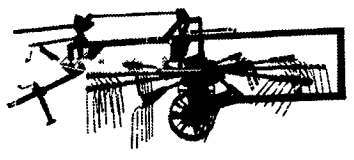
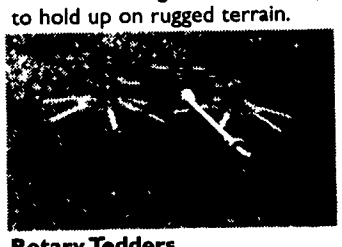
PRODUCE TOP CROPS WITH HORSE OR TRACTOR!

I&J Implements are Versatile, Durable, and Innovative.

Rotary Rakes
Available in 3 pt. or trailing, engine driven PTO or ground drive. Engineered to hold up on rugged terrain.





Rotary Tedders
Available in 9' & 14' models. Both models have spring tines & tilt adjustment. Can be adapted for horse drawn use.

Cultivators
3 pt. models for 1- 6 rows. Horse drawn models from walk-behind to 4 row w/ seat on top or back.

❖ GRAZING BITS ❖

To Shade Or Not To Shade?

Heat stress is caused by high air temperature and humidity. Heat stress causes an animal to use energy to pant or otherwise dissipate heat. This energy is then not available for milk or meat production. Your first thought may be to provide shade for the animals. However, in most situations, shade will actually cause milk or meat production levels to decrease.

Providing constant shade to grazing animals should not be a high priority. On days when the temperature and humidity are comfortable, and a breeze is blowing, cows can still be found in the shade. If they are in the shade and not grazing, the dry matter intake is less, which will result in lower milk production. If beef animals have shade, the reduced dry matter will cut back on weight gain.

According to "Prescribed Grazing and Feeding Management for Lactating Dairy Cows," at temperatures above 90 degrees, a cow's intake will be reduced by approximately 40 to 65 percent of normal. Also, cows will reduce intake of forage before reducing intake of grain because digestion of forage creates more body heat than intake of grain. When heat and humidity are very distressing to animals, it is best to move the cows from open pastures to an area where they can access shade, or into the barn with fans blowing over them.

For more information on pasture and grazing management, contact your local cooperative extension office, conservation district, or Natural Resources Conservation Service.

Pasture Quality And Forage Sampling

Pasture quality can vary throughout the grazing season and from year to year. Most producers have their stored forages tested regularly for quality and proper rationing. Knowing what nutrients are being consumed in a pasture will also help a farmer develop a balanced feeding program. The best way to know what is being consumed is to sample the pasture regularly.

A sampling program should begin after the first grazing rotation when intake is not limited (six to 10 inches). An analysis of pasture at least once every rotation is highly recommended in "Prescribed Grazing and Feeding Management of Lactating Dairy Cows." More samples will be taken in the spring, and slow down as the season progresses. Over time, a farmer will to sample less frequently as a database develops.

When sampling the pasture, a representative sample needs to be obtained. Paddocks that are in similar stages of growth and due to be grazed soon are the best places to sample. Watching the cows graze and seeing what they eat indicates what plants should be tested.

Take the tops of the plants in your hand and wrap them as if your hand was a tongue. Then rip off the plant at a height typical of grazing animals and place in a bucket. Several samples from the paddocks should be placed in the bucket and subsampled. Place the subsample in a plastic bag, exclude air and freeze before sending to a lab. Samples should not sit in the sun or a hot vehicle for more than a half an hour before the sample will start to ferment.

Not all forage testing labs analyze things the same way. Analyses should be based on calibration equations that have been developed using actual pasture samples analyzed by wet chemistry methods from the region. Equations developed from hay or silage samples or based on software from another part of the country may not be accurate of your pasture.

Throughout the first three years of managed grazing, a frequent sampling schedule should be followed for best results. Pasture quality is likely to improve each year as both management and plants improve. After three years, samples should be collected regularly.

Hesston Disc Mower Conditioners Model 1340

Cut corners without cutting quality.

Take a 12-foot swipe through your toughest crop Cut square corners Cut on either side of the tractor Maneuver around obstacles You can do it all while making quality hay with the Hesston® 1340 Disc Mower Conditioner

Quick moves for quick hay making.

While the center pivot design of the 1340 gives you unmatched maneuverability, 16 high speed swingaway knives keep you moving through damp hay and tough spots You'll cut drying time too, with the long 110-inch conditioner rolls

Save maintenance time, too.

From the specially designed gearbox to sealed cutterbed bearings to reversible knives, the 1340 is designed for low maintenance

Come in today and see how the 1340 cuts tough haying jobs down to size

Nobody knows hay like HESSTON

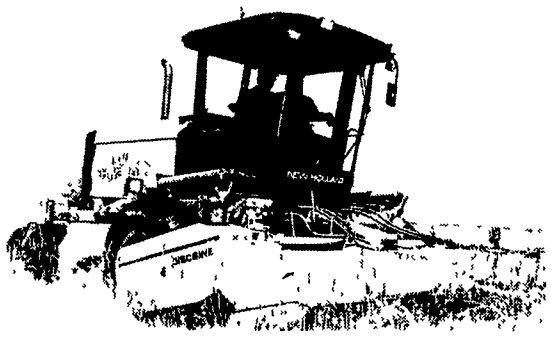
2001 Season SAVINGS

NEW HOLLAND

Wake Up to the Season's Best Buys

If you've been taking a long Winter's nap, now is the time to wake up and hurry in to your New Holland dealer. He's ready to give you great buys on a new baler, mower-conditioner, forage harvester, or other eligible hay tool from New Holland. All with special retail financing programs.

Wake up to the only choice that makes sense... New Holland. Hurry in to see your New Holland dealer for big savings before **March 31, 2001!**



Knock down your biggest fields – FAST

For speed, high-volume capacity, top-quality cutting, and all-day comfort, nothing beats the New Holland Model HW340. It combines New Holland's legendary Speedrower® dependability and top capacity with high-performance Discbine® disc mower-conditioner technology.

- Makes fast work of even the toughest fields – 12 disc modular cutterbar makes a wide 15 1/2-foot cut
- Each disc is an independent module – sealed in its own oil and connected by short, hardened alloy drive shafts – for fast, easy, service and repair.

NEW HOLLAND

4x5 perfection

New Holland's Model 648 Roll-Belt™ round baler turns out the best 4-ft.-by-5-ft. bales. The best in density, the best in capacity, and the best in appearance. It's perfect for your operation.

- Roll-Belt design makes uniform bales weighing up to 1,200 lbs.
- Available Bale Command Plus™ monitoring system takes the guesswork out of baling
- Wide pickups are available for large windrows.

NEW HOLLAND

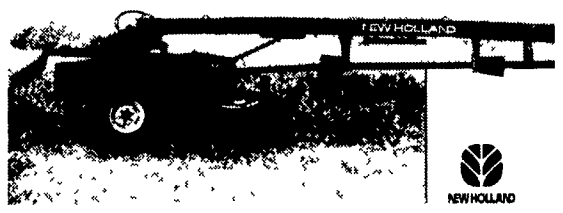
Flail 3 windrows in one pass

You'll cover acres fast, and bale or chop sooner with the Model 169 tedder. It uses six rotors to ted a wide 22'8" area. That's wide enough to fluff three windrows from a 9' mower-conditioner.
Yet transport width is a narrow 9'8" for easy maneuvering. The frame of the "169" is fully articulated, so it hugs the ground to fluff all of your crop for fast drying. And the Digidrive® Coupling provides smooth, reliable operation.

NEW HOLLAND

Beat the weather with the Model 169.

Satisfy Your Need for SPEED



Serious haymakers choose New Holland Discbine® disc mower-conditioners because they save time – mowing time, drying time and service time.

NEW HOLLAND

- Fast, clean cutting, even in tough, thick, wet crops.
- Fast drydown from your choice of two superior conditioning systems - chevron-design intermeshing rubber rolls for gentle, thorough conditioning and flail conditioning for extra-fasty drydown in grass crops.
- Fast, easy servicing from the most advanced modular cutterbar design available. Individually sealed gear cases and independent drive shafts deliver reliability and peace of mind.

Take another look at New Holland. We have the right solution.
